Project Brief:

The College obtained vacant possession of Stadium House in White City, a two story, circa 3,000 sqm office building. The site was purchased from the BBC with the intent to form part of the College's future White City campus development. This proposal will refurbish the project over 2015-2016 for a number of different uses.

Phase 1 of the scheme refurbished the north block at ground and first floor to provide new space for elements of the School of Public Health. This phase delivered open plan and cellular offices on the first floor, with a clinical trial unit consisting of examination rooms, clinical rooms, laboratory, reception and break out space for patients on the ground floor. This was a fast track project, starting on site in October with the space completed to allow the School of Public Health to vacate their premises on North Wharf Road by end of December 2015.

The work of the School of Public Health is located centrally within the College's Health and Wellbeing strategy. Specifically it was proposed that the Imperial Clinical Trials Unit (ICTU) and part of the Neuroepidemiology and Ageing Unit (NEA) were relocated to Stadium House. NEA is engaged in clinical trials on dementia and Alzheimer's prevention and has ongoing projects to deliver and new industry-funded trials under current negotiation. ICTU's activities encompass all stages of clinical trials from generation to delivery, with specific expertise in trial methodology and all aspects of delivery in key disease areas, ensuring that the regulatory, legal and quality control aspects of trials are met.

For more information on the School of Public Health refer to https://www.imperial.ac.uk/publichealth/

Project Review

8Build and the project team did a great job, under tight timescales to successfully re-house the ICTU and NEA elements of the School of Public Health by the end of 2015. The facilities have been delivered to a high level and will definitely enhance the School's clinical trials activities. The occupants look forward to the refurbishment of the remainder of the building and local facilities being further improved.

Stephen Pullen, Client Coordination Manager, Faculty of Medicine.

Project Facts:

Project Manager: Meedhurst Project Management
Senior Supplier: Alessandra Foderaro, Imperial College Estates Development & Projects
Construction Cost: £2.3M
Stage A to Stage L Duration: July 2015—January 2016
