# MSc Petroleum Geoscience

This document provides a definitive record of the main features of the programme and the learning outcomes that a typical student may reasonably be expected to achieve and demonstrate if s/he takes full advantage of the learning opportunities provided. This programme specification is intended as a reference point for prospective students, current students, external examiners and academic and support staff involved in delivering the programme and enabling student development and achievement.

Description of Programme Contents

The purpose of the programme is to develop multi-skilled petroleum geoscientists for the modern petroleum industry. The programme is designed to provide:

- basic knowledge in the key subsurface petroleum exploration & production geoscience disciplines;
- specialist knowledge in sequence stratigraphy, sedimentology, structural geology, basin analysis, petroleum systems & reservoir geology;
- skills in state-of-the-art technologies (e.g. 3D seismic interpretation, formation evaluation, reservoir modelling & basin modelling);
- guidelines for the main E&P workflows (e.g. play fairway analysis, prospect evaluation, appraisal, development & reservoir management);
- multidisciplinary and transferable skills for working within integrated subsurface evaluation teams.

Term 1 is focused on Production Geoscience, notably reservoir rocks and fluids. It culminates in a major group project on the Wytch Farm Field. During this term you will have numerous learning opportunities from working alongside and sharing several joint courses with petroleum engineering students.

Term 2 is directed towards Exploration Geoscience, with emphasis on basin-scale geology. This term culminates in the Barrel Award Group Project. This is immediately followed by a three week period of fieldwork studying carbonate and siliciclastic reservoir analogues, basin-scale sequence stratigraphy, and structure and petroleum systems in an exhumed salt basin.

The examinations are held in January and May. Immediately after the May examinations, students undertake a 3-month independent project throughout June, July and August. They complete the course in mid-September following the presentations of the independent projects.

Learning Outcomes

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial College degree programme. The Graduate Attributes are available at: www.imperial.ac.uk/students/academic-support/graduate-attributes

Knowledge and Understanding

- Students develop advanced skills and competency in the core petroleum geoscience technical disciplines, notably in geology (i.e. basin analysis, sedimentology and sequence stratigraphy, structural geology, tectonics and reservoir geology) and in geophysics (i.e. basic petroleum geophysics, seismic data acquisition and processing and 2D/3D seismic interpretation).
- Students are provided essential knowledge of the key allied petroleum geoscience and engineering disciplines (i.e. geostatistics, petrophysics, reservoir engineering, well testing and reservoir simulation) and to appreciate their relationship and inter-dependency with the core petroleum geoscience subjects.

Intellectual Skills

- Students apply these skills to the full spectrum of hydrocarbon exploration and production activities (i.e. play fairway analysis, prospect evaluation, appraisal, field development planning and reservoir management) through classroom study, field work, integrated team projects and independent research.
• Students present modern petroleum industry methods and practices including demonstration and hands-on use of industry-standard software and hardware systems for 2D/3D seismic interpretation, basin modelling, petrophysics, structural restoration and 3D reservoir geological modelling.

• Students promote the ethos of synergy within integrated, multidisciplinary teams of geoscientists and petroleum engineers in the exploration and development of oil and gas resources.

**Practical Skills**

• Students are exposed to advanced concepts and research developments in the core geoscience disciplines that could provide work opportunities within research (universities, industry technical centres, government laboratories, etc.), technology development (e.g. software vendors, consultancies, etc.) or with industry service companies (e.g. seismic data acquisition and processing, well logging, mud logging, etc.).

• Students are trained in best current industry workflows and work practices, in order to be able to work effectively, either independently or as a member of an integrated team.

**Transferable Skills**

• Students develop transferable skills including communication (oral, written and aural), team work, decision making, risk analysis, time and project management, and work ethics.

• Students get equipped with the knowledge and experience needed to select career opportunities and subject areas that are most appropriate to their individual capabilities, aptitudes and interests.

**Entry Requirements**

<table>
<thead>
<tr>
<th>Academic Requirement</th>
<th>Minimum Upper Second Class Honours (2:1) degree in an Earth Science based subject from a UK university or its equivalent. Graduates with other closely related Earth/Environmental Science degrees (Physical Geography or Oceanography, for example) will also be considered. Professionals with different qualifications but with relevant industrial experience are also encouraged to apply.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-academic Requirements</td>
<td>None</td>

</tbody>
</table>

### Academic Feedback Policy

Feedback is ongoing; it happens during practical classes, in workshops, in lectures, in tutorials and in almost any part of your learning. During fieldwork feedback is provided up to 12 hours each day, and there are other areas where students and staff provide feedback. Feedback is intended to extend your knowledge, skills and learning in a variety of ways.

If there is written feedback on submitted coursework, it is provided within two weeks of submission (minor pieces of coursework) or six weeks (major pieces of coursework – Wytch Farm and Barrel Award group projects, independent project). Some staff choose to give verbal feedback on coursework at the start of the next teaching session, others give written feedback. Not every course will be the same. If feedback is not provided by staff within two weeks of submitting written work and you have not been notified of a delay, we ask students to notify the Course Director by e-mail.

Where practical, and in some cases this will not be practical, staff will give feedback to the entire student group on the examinations assessment. Staff are normally extremely willing to give individual feedback to students, either their personal tutees or in class as the needs arise.

### Re-sit Policy

The College’s Policy on Re-sits is available at: [www.imperial.ac.uk/registry/exams/resit](http://www.imperial.ac.uk/registry/exams/resit)

Students who fail examinations will be provided with the opportunity for one re-sit, with the next cohort in the following academic year. Students who need to re-sit examinations/resubmit their final report may be required to pay a re-sit fee.

<table>
<thead>
<tr>
<th>Assessment Structure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Marking Scheme</td>
</tr>
<tr>
<td><strong>Distinction</strong>: to be awarded where a candidate has achieved an aggregate mark of 70% or greater across the programme as a whole, including a mark of 70% or greater in each of the three elements of the course (i.e. coursework, examinations and independent project).</td>
</tr>
<tr>
<td><strong>Merit</strong>: to be awarded where a candidate has achieved an aggregate mark of 60% or greater across the programme as a whole including a mark of 60% in each of the three elements of the course (i.e. coursework, examinations and independent project).</td>
</tr>
<tr>
<td><strong>Pass</strong>: to be awarded where a candidate has achieved an aggregate mark of 50% or greater across the programme as a whole.</td>
</tr>
<tr>
<td><strong>Fail</strong>: results when a candidate has achieved an aggregate mark of less than 50% or across the programme as a whole, and/or has failed to pass each of the three elements of the course.</td>
</tr>
</tbody>
</table>

All candidates must pass at least **three** of the five examinations papers.

Recommendations for final degree results are at the discretion of the Examinations’ Board.

The College’s Quality & Enhancement Framework is available at:
www.imperial.ac.uk/registry/proceduresandregulations/qualityassurance

The College’s Academic and Examination Regulations can be found at:
http://www3.imperial.ac.uk/registry/proceduresandregulations/regulations

Imperial College is an independent corporation whose legal status derives from a Royal Charter granted under Letters Patent in 1907. In 2007 a Supplemental Charter and Statutes was granted by HM Queen Elizabeth II. This Supplemental Charter, which came into force on the date of the College’s Centenary, 8th July 2007, established the College as a University with the name and style of “The Imperial College of Science, Technology and Medicine”. Further details can be found at:
http://www.imperial.ac.uk/admin-services/secretariat/college-governance/charters-statutes-ordinances-and-regulations/

Imperial College London is regulated by the Higher Education Funding Council for England (HEFCE). Further details can be found at:
http://www.hefce.ac.uk/reg/of/
