In this activity we are going to make some model dinosaurs. So that your dinosaur can eat a tasty meal we are going to use paper fasteners to make a joint that will rotate and turn. This will allow your model to bite and move.

You will need:
- Scissors
- Split pins
- Colouring pens or pencils
- Glue (if you use the template)
- White card
**STEP 1**

Draw a dinosaur but draw the jaw **separately**.

Some of the jaw will need to **overlap** with the head of the dinosaur when finished.

**STEP 2**

Carefully cut out the dinosaur and jaw piece using scissors.

**STEP 3**

Place the jaw where you want it.

With a pen carefully make a small hole through the overlap where you want the joint to go.

This **must** go through both pieces of paper/card.
STEP 3
Push the paper fastener through the hole and open up the arms on the other side to connect the jaw up to the mouth.
Now the jaw can rotate and the dinosaur can bite.

STEP 5
Use some colouring pens or pencils to colour in the dinosaur.

STEP 6
You can now make some more prehistoric friends, here is a Deinosuchus, a giant crocodile that lived millions of years ago, can you make your own?
STEP 7

You can give your dinosaur more joints using extra split pins!
You can cut this out or draw your own on some more white card.
