The product is marked with a crossed-out wheeled dustbin. This indicates the need to dispose of household appliances separately from general waste. It also means that the appliance is recovered in order to conserve significant savings in energy and resources. A responsible and appropriate disposal of electric and electronic wastes helps to conserve resources for the environment and healthly deriving from negative consequences for the environment and healthly deriving from inappropriate disposal of household appliance separately avoids possible damage to the environment.

Disposing is a household appliance separately avoids possible damage to the environment.

IMPORTANT INFORMATION FOR CORRECT DISPOSAL OF THE PRODUCT IN ACCORDANCE WITH EC DIRECTIVE 2002/96/EC.

To come into compliance with EEC level conformity, EN 60846 standards and electromagnetic interference compatibility (EMC) parts intended, this appliance has been manufactured to the strictest standards and complies with all applicable regulations, including Electrical Safety (LVD) regulations and requirements of EEC Directive 2004/108/EC.

This appliance has been designed, constructed and marketed in compliance with safety requirements of EEC Directives 2006/95/EC.

CE Declaration of Conformity:

How to connect to an alternative plug:

1. Insert plug into outlet. If the fuse plug is not suitable for your socket outlet, then it should be cut off and disposed of safely to prevent the risk of electric shock. A suitable alternative plug of at least 13 amp rating to BS 1363 should be used.

Position:

Important: Do not use the appliance without the fuse cover!

2. Fit replacement fuse, ASTA approved to BS 1362 type, into the fused plug. For fuses in this type of plug, follow the steps below:

The mains lead of this appliance has been fitted with a BS 1363A 13 amp fuse.

3. Replace fuse cover.

Important: replace fuse cover.

Before First Use

• There is water in the lower part of the refrigerator compartment.

• The cooling gas in the refrigerator will make a slight bubbling noise.

• The side and rear walls are clean, and there is nothing resting on the
dust and not touching the rear wall.

• The temperature of the room is adequate (60º or above).

• There is enough ventilation at the side and rear walls.

• The appliance is noisy.
Ensure all compartments are fully closed after use.
- Appliance and waste energy.

Door open for long periods will affect the temperature inside the appliance. 
- Door open for as long as necessary. Leaving the door open for prolonged periods will allow the cool air to circulate.

The foods to allow the cool air to circulate.
- The foods in the fridge compartment will help to keep the temperature low and save energy.

Avoid placing frozen foods in the fridge compartment. These should be stored at the rear of the shelf to prevent defrosting caused by Any foods to be used soon should be stored at the rear of the shelf. 
- The door being open for prolonged periods will prevent the loss of moisture. Keep food fresh and avoid unpleasant odours.

Wrap or cover food before putting into the fridge. This will help prevent frost and possible condensation problems which will be difficult to remove.
- Make sure food is clean and any extra water is wiped away before putting into the fridge.

Never put hot foods in the refrigerator. Warm food should be allowed to cool to room temperature before being put into the refrigerator.
- Never put hot liquids in the refrigerator. 

Ridge Use

Defrosting the Ice Box

To prevent the ice from melting, do not remove the ice box. 
- The ice box compartment

To keep the ice from melting, do not use any metallic or sharp objects to remove the ice from the box.
- Do not use heaters or defrosting sprays in this appliance.

The ice box should be defrosted regularly to ensure the most efficient running, at a minimum of once every six months.

Once defrosting is complete, dry the inside of the ice box with a sponge or clean cloth.
- The ice box compartment

Defrosting the Fridge

Il is important to keep the channel clear at all times. The defrosted water is collected in an evaporating tray at the back of the appliance.
- The fridge is self-defrosting. Any water created will run out of the fridge through the channel at the back of the fridge.
