Welcome to the College

Congratulations on joining Imperial College London, the only university in the UK to focus exclusively on science, medicine, engineering and business.

From Fleming’s discovery of Penicillin to Gabor’s invention of holography, Imperial has been changing the world for well over 100 years. You’re now part of this prestigious community of discovery and we hope you will take this opportunity to make your own unique contribution.

We’re committed to providing you with the very best academic resources to enrich your experience. We also provide a dedicated support network and a range of specialist support services to make sure you have access to the appropriate help, whether that’s further training in an academic skill like note taking or simply having someone to talk to.

You’ll have access to an innovative range of professional development courses within our Graduate School throughout your time here, as well as opportunities to meet students from across the College at academic and social events – see page 6 for more information.

We actively encourage you to seek out help when you need it and try to maintain a healthy work-life balance. Our choice of over 375 clubs, societies and projects is one of the largest of any UK university, making it easy to do something different with your downtime. You will also have access to gym and swimming facilities (following an annual fee of £30 in 2018-19) across our campuses.

As one of the best universities in the world, we are committed to inspiring the next generation of scientists, engineers, clinicians and business leaders by continuing to share the wonder of what we do through public engagement events. Postgraduate students, alongside our academics and undergraduate students, make a significant contribution to events such as our annual Imperial Festival and our term-time Imperial Fringe events – if you’re interested in getting involved then there will be opportunities for you to do so.
Our Principles

In 2012 the College and Imperial College Union agreed ‘Our Principles’ a series of commitments made between students and the College. The Principles are reviewed annually by the Quality Assurance and Enhancement Committee and changes recommended for Senate approval.

Imperial will provide through its staff:
• A world class education embedded in a research environment
• Advice, guidance and support
• The opportunity for students to contribute to the evaluation and development of programmes and services

Imperial will provide students with:
• Clear programme information and assessment criteria
• Clear and fair academic regulations, policies and procedures
• Details of full programme costs and financial support
• An appropriate and inclusive framework for study, learning and research

Imperial students should:
• Take responsibility for managing their own learning
• Engage with the College to review and enhance provision
• Respect, and contribute to, the Imperial community

The Imperial College Students' Union will:
• Support all students through the provision of independent academic and welfare assistance
• Encourage student participation in all aspects of the College
• Provide a range of clubs, societies, student-led projects and social activities throughout the year
• Represent the interests of students at local, national and international level
Welcome from the Graduate School

Professor Sue Gibson,
Director of the Graduate School

The Graduate School has several roles but our main functions are to provide a broad, effective and innovative range of professional development workshops and to facilitate interdisciplinary interactions by providing opportunity for students to meet at academic and social events. Whether you wish to pursue a career in academia, industry or something else, professional skills development training will improve your personal impact and will help you to become a productive and successful researcher.

Professional development courses for Master’s students are called “Masterclasses” and they cover a range of themes, for example, presentation skills, academic writing and leadership skills (http://www.imperial.ac.uk/study/pg/graduate-school/professional-skills/masters/). All Masterclasses are free of charge to Imperial Master’s students and I would encourage you to take as many as you can to supplement your academic training. The Graduate School works closely with the Graduate Students’ Union (GSU) and is keen to respond to student needs so if there is an area of development training, or an activity that you would like us to offer, but which is not currently provided, please do get in touch (graduate.school@imperial.ac.uk).

The Graduate School also runs a number of exciting social events throughout the year which are an opportunity to broaden your knowledge as well as to meet other students and have fun. You should regularly check the Graduate School’s website and e-Newsletters to keep up to date with all the events and development opportunities available to you.

Finally, I hope that you enjoy your studies here at Imperial, and I wish you well.

Dr Janet De Wilde,
Head of Postgraduate Professional Development

I would like to welcome you to the Graduate School’s programme of professional development for research students.

Our team of tutors have a wide variety of research and other career experiences. We understand just how important it is to develop professional skills whilst undertaking postgraduate research studies. Not only does our programme help you to progress in your academic studies, it can also be part of your preparation for your future career. We provide the opportunity for you to practice your presentation skills, academic writing skills and other key skills. It will also give you the chance to meet students from a variety of subject disciplines building your network.

We offer a range of interactive courses including face-to-face workshops, interactive webinars and online self-paced courses. We also offer a choice of residential opportunities. We have three residential retreats including thesis writing, team work and research impact. We also have our Global Fellows Programme which provides the fantastic opportunity to spend a week with researchers from across the world. I encourage you to explore and engage with the diverse range of opportunities on offer from the Graduate School and I wish you well in your studies.
The Graduate School

You automatically become a member of the Graduate School when you register as a postgraduate student at Imperial.

The Graduate School has been set up to support all postgraduate students at the College through:

- Training and development courses
- Networking activities, social and academic events to encourage cross-disciplinary interactions
- Forums to represent the views of postgraduate students throughout the College

‘Masterclass’ professional skills courses

You can see the full range of free professional skills courses for postgraduate students on the Graduate School website:

[www.imperial.ac.uk/study/pg/graduate-school/professional-skills/masters](http://www.imperial.ac.uk/study/pg/graduate-school/professional-skills/masters)

All courses can be booked online.

Imperial Success Guide

The Imperial Success Guide is an online resource with advice and tips on the transition to Master’s level study. More than just a study guide, it is packed with advice created especially for Imperial Master’s students, including information on support, health and well-being and ideas to help you make the most of London.

[www.imperial.ac.uk/success-guide](http://www.imperial.ac.uk/success-guide)
Welcome from the Graduate Students’ Union (GSU)

I am delighted to welcome you to Imperial College! Let me introduce you to the Graduate Students’ Union (GSU). We are the representative body defending your interests as a postgraduate student in major decisions taken by the College. Beyond that, we work towards building a thriving postgraduate community that spans faculties and where students effectively communicate in an interdisciplinary way. Our committee is comprised of motivated postgraduate students like yourself, who have been appointed in university-wide elections and volunteer to make your experience at Imperial as fulfilling and enjoyable as possible.

So, what are we up to for this coming year 2018/19? We are going to focus on three major areas of action:

- Continue improving postgraduate well-being by increasing the quality of supervision and by creating strategies to tackle common mental health challenges in higher education.
- Develop the GSU to become central to the post-graduate community by improving the two-way flow of information, between the GSU and you.
- Organise exciting events around the topics of well-being, interdisciplinary research, and entrepreneurship.

As the GSU president, I would like to emphasise that Imperial College London is relying on its postgraduate students to maintain its position as a front-runner in world-class research and teaching. For us, the GSU, to be successful we need to receive as much of your input as possible. We want to work with you, for you!

Finally, I hope that you have a fantastic time here at Imperial and take advantage of the richness of opportunities that awaits you. If ever you have questions or ideas to share with us, please do not hesitate to get in touch with us and we are looking forward to seeing you at our events!

Ute Thiermann, GSU President 2018/19

gsu.president@imperial.ac.uk

www.imperialgsu.com
1. Introduction to the Department

Welcome from the Head of Department

I trust you have had a great summer, whether you were gaining work experience or taking a well-earned rest, and I hope that you are now ready to study again with renewed vigour!

You will be working alongside some of the brightest and most motivated students from around the world, taught by an exceptional group of internationally-leading experts. A strength of our Department, and the College as a whole, is its national and cultural diversity (well over 50 nationalities are represented in our Department alone) and we don’t intend to allow Brexit, or any other outside influence, to change that.

London is a wonderful place to be a student. Please take full advantage of your once-in-a-lifetime opportunity and find a good balance between studying hard to fulfil your potential, and enjoying the company of your fellow students and life in London.

Good luck for the coming year!

Professor Nick Buenfeld

Welcome from the Programme Director

On behalf of all staff involved in the delivery of the MSc courses in Advanced Structural Engineering I am pleased to welcome you all to Imperial College. I hope that the 2018-2019 academic year is one that you will look back upon with a great sense of pride and achievement.

We are proud of the history that our Section can boast of and the contributions that we have made, and continue to make, to our industry over the past decades. You are a part of that legacy now and I look forward to seeing the role you play in this ongoing narrative.

The sense of achievement you will feel upon completion will reflect the fact that the coming months will be demanding. Some of you will find the course more demanding than others, but all of you will be tested. You are fortunate to have access to world class resources, both in terms of the library and computational facilities as well as the calibre of the academic and support staff within the Section. I sincerely hope that you make the most of these resources while you are with us.

London is an incredible, vibrant city, and a wonderful place to live and study. I encourage you to experience life in London and to allow the energy of the city to invigorate your studies.

I look forward to interacting with you all in due course, and look forward to seeing what you all achieve this year.

Dr Peter J Stafford

English language requirement
See the Admissions website for details:

[www.imperial.ac.uk/study/pg/apply/requirements/english](http://www.imperial.ac.uk/study/pg/apply/requirements/english)

For information on English language support available while you’re here, see the Wellbeing and Advice section.

Attendance and absence
You must inform your Cluster Administrator if you are absent from the College for more than three days during term. If the absence is due to illness you must produce a medical certificate after seven days. If you miss an examination through illness you must produce a medical certificate immediately on your return to College. In such circumstances, a Mitigating Circumstances Form must also be completed.

[http://www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/](http://www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/)

The Registry will be informed of all student non-attendances, as the College is obliged to report the non-attendance of students on Tier 4 to the Home Office.

Read through Appendix A – Monitoring Attendance of Students, for information on the procedures in the Department of Civil and Environmental Engineering.
**Summer Term:** Formal teaching may have finished for the year, but while you are working on your project and writing your dissertation, you are still subject to the attendance conditions of your degree, up to the expiry of your student registration at the end of September 2019. The exceptions to this are:

- Short breaks (approved by your supervisor and notified to your Cluster Administrator by email).
- Completion of all the academic requirements of your degree.
- Approved External Study Leave (e.g. Fieldwork) (specific form to be completed – see Appendix A).

**Recording of External Study Leave**

For those of you spending periods of time abroad which form part of your research project (e.g. Fieldwork), such absences must be covered by the Postgraduate Taught (MSc): Recording of External Study Leave Form (see Appendix A). This form must be completed and submitted, via your Cluster Administrator, in advance of the requested absence. A record will be held in Starfish and you must register your return from Study Leave in person to your Cluster Administrator in order that your record may be updated for audit purposes.

The Registry will be informed of all student non-attendances, as the College is obliged to report the non-attendance of students on Tier 4 visas to the Home Office.

Read through Appendix A – Monitoring Attendance of Students, for information on the procedures in the Department of Civil and Environmental Engineering.
Key dates 2018-19

Term dates
Autumn term: 29 September – 14 December 2018
Spring term: 05 January – 22 March 2019
Summer term: 25 April – end of course

Closure dates
Christmas/New year: 22 December 2018 – 01 January 2019
Easter holiday: 18 April – 23 April 2019
Early May bank holiday: 06 May 2019
Spring bank holiday: 27 May 2019
Summer bank holiday: 26 August 2019

Programme dates
Written examinations: 14 December 2018
07 January 2019 (for 2 weeks)
29 April 2019 (for 3 weeks)
Project hand-in: Late August 2019
Board of Examiners meeting September 2019
End of course: 30 September 2019

Key events
Postgraduate Awards Ceremonies: 06 May 2020
Imperial Festival and Alumni Festival: 29-30 June 2019
2. Programme information

**Imperial Mobile app**

Don’t forget to download the free Imperial Mobile app for access to College information and services, College emails and a library catalogue search tool.

![App Link](www.imperial.ac.uk/imperialmobile)

**Programme overview**

The courses consist of a number of core subjects and elective modules which are taken in the first two terms. All core courses must be taken, in addition to electives in both taught terms, to a total of 12 modules in completion of the programmes. For certain spring term modules, a related module in autumn term may be a prerequisite. The electives enable students to develop a primary study theme (e.g. advanced structural analysis, concrete materials and structural assessment or seismic design of concrete structures). The courses attach considerable importance to both advanced structural analysis and theoretical concepts in structural engineering as well as fundamental and applied concepts related to structural design.

In the final months of the programme, all students undertake one two-week conceptual design project in a group environment before completing a major investigative research dissertation, or a major detailed design oriented project (both of which are individual submissions).

The aims of our extensive suite of MSc courses are to:

- To provide students with a solid technical basis in the key areas of the engineering profession through delivery of a coherent, coordinated and balanced degree programme, integrating core engineering science with practical application.
- To enable students to acquire a mature appreciation of the context in which engineering projects are developed within the industry.
- To develop our students’ excellence in oral and written, and poster presentations.
- To provide students with sufficient material to explore and study the subject, in preparation for professional practice.
- To provide the basis for the recognition and understanding of the major features of structural engineering.
- To develop an understanding of how this knowledge may be applied in practice in an economic and environmentally sustainable manner.
- To foster the acquisition and implementation of broad research and analytical skills related to structural engineering.
- To attract highly motivated students irrespective of race, gender, background and disability, from the UK and overseas.
- To develop new areas of teaching in response to the advance of scholarship and the needs of the community including vocational training.
- To provide an introduction to the subject for students from other relevant and numerate disciplines.
Programme structure

The full time programme is taken over 12 months, with a single entry point per year at the beginning of October.

Part time options typically involve:

- One day per week over three years.
- Term release (taken part time on a term-by-term basis, over three years).
  - Year 1: Autumn term
  - Year 2: Fallow (or just project)
  - Year 3: Spring term and project
  - [http://www.imperial.ac.uk/civil-engineering/prospective-students/postgraduate-taught-admissions/advanced-structural-engineering-cluster/term-release/](http://www.imperial.ac.uk/civil-engineering/prospective-students/postgraduate-taught-admissions/advanced-structural-engineering-cluster/term-release/)

Competency statements

Accreditation and professional membership

We would like to encourage you to become a Student or Graduate Member of the Professional Institutions in the field that you are studying in. The following professional bodies are relevant for the Master’s programmes that we are running at the Department of Civil and Environmental Engineering. For each of them, we define the most appropriate route for you to become a member:

The Institution of Civil Engineers (ICE)

Apply for graduate membership if you already have a degree in Civil Engineering:

[https://www.ice.org.uk/membership/grades-of-ice-membership/graduate-membership](https://www.ice.org.uk/membership/grades-of-ice-membership/graduate-membership)

The Institution of Structural Engineers (IStructE)

[https://skempton.wufoo.com/forms/q7x2x3/](https://skempton.wufoo.com/forms/q7x2x3/)

Further details of our accreditation are to be found at:

[http://www.imperial.ac.uk/civil-engineering/prospective-students/postgraduate-taught-admissions/](http://www.imperial.ac.uk/civil-engineering/prospective-students/postgraduate-taught-admissions/)

Programme delivery

Modules will be delivered through a series of lectures, although teaching methods will vary between individual modules. Other teaching methods employed may include tutorials, group discussions, group work, progress tests, computer laboratory sessions, practical work, and
others depending on the member of academic staff responsible. Some lectures will be delivered by visiting academics or industry professionals, where appropriate.

**Submission of Coursework**

Coursework submissions may be online or in paper copy, depending on the preference of the setter.

**Coursework Cover Sheets**

Coursework coversheets for group and individual work can be found in the General Office. Each one contains a plagiarism declaration on the front which must be signed. An example of the coursework cover sheets used for individual and group work can be found in Appendix E.

**Submitting Coursework**

MSc coursework will be set with a due date and time, and specific submission information will be made available to students.

**Receiving Marked Coursework**

Lecturers should return coursework within three weeks of it being handed in (four, if this period includes a College vacation). If there is a delay you should consult your MSc Cluster Administrator.

**Returned Marked Coursework**

You are required to submit all your marked coursework to your MSc Cluster Administrator, unless instructed otherwise, by the end of the academic session for inspection by the External Examiners.

**Penalties for late submission**

Submissions made within 24 hours after the deadline has passed will have the mark capped at 50%. Submissions made more than 24 hours after the deadline has passed will receive a mark of zero.

**Development of professional skills**

Professional skills development will be delivered throughout the curriculum in various forms, including teamwork, problem-solving, applying concepts to real-world situations, and formal presentations. [http://www.imperial.ac.uk/study/pg/graduate-school/professional-skills/masters/](http://www.imperial.ac.uk/study/pg/graduate-school/professional-skills/masters/)

**Module descriptors**

A full list of all MSc Advanced Structural Engineering module descriptors can be found on the following link: [http://www.imperial.ac.uk/civil-engineering/prospective-students/postgraduate-taught-admissions/advanced-structural-engineering-cluster/syllabus/](http://www.imperial.ac.uk/civil-engineering/prospective-students/postgraduate-taught-admissions/advanced-structural-engineering-cluster/syllabus/)
Deadlines for confirmation of elective module choices

The deadline for choosing your autumn term elective modules is Wednesday, week 3.
The deadline for choosing your spring term elective modules is Wednesday, week 18.

Employability statement

Planning for your future is an important aspect of postgraduate study. At Imperial you'll be well-supported by our Careers Service, who are on hand to help in a variety of ways.

http://www.imperial.ac.uk/careers

Imperial is one of the UK universities most targeted by graduate recruiters who also play an active role in our career development programme.

This provides access to hundreds of potential employers in a range of settings including industry sector forums, employer presentations, careers fairs, mock interviews and our one to one ‘recruiter-in-residence’ sessions.

A large number of employers also advertise their opportunities each year through JobsLive — our online careers platform, which Imperial students can access from the first day of term.

Work opportunities

The Department encourages you to take early advantage of the careers education, information and guidance available from the following sources:

- College Careers Advisory Service (Level 5, Sherfield Building), with which you can book careers appointments, quick interview sessions, skills workshops, mock interviews, and much more.

http://www.imperial.ac.uk/careers/

- The transferable skills training programme run by the Graduate School.

http://www3.imperial.ac.uk/graduateschools/

- Careers presentations and careers fairs, which occur throughout the autumn and spring terms. Details are circulated to all students closer to the dates.

- Details of jobs will be posted on the careers sections of the website. New posts are notified to us throughout the year, so check online regularly:

http://www.imperial.ac.uk/careers

- Additionally you can contact the Departmental Careers Advisor for further guidance and information:

Dr Peter Stafford
Room 321
p.stafford@imperial.ac.uk
**Timetable**

Your timetable will be delivered direct to your Imperial College Outlook calendar.

**Research dissertations and design projects**

Undertaken over the final months of the course, you will aim to complete either:

- One group-based conceptual design project and a detailed individual design project
- One group-based conceptual design project and a research-orientated dissertation.

The principle aim of the Design Project/Research Dissertation is to assess the capability of students to undertake independent research-based work.

<table>
<thead>
<tr>
<th>Total Marks Allocated</th>
<th>300</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Conceptual Project</strong></td>
<td>30</td>
</tr>
<tr>
<td><strong>Detailed Project or Dissertation</strong></td>
<td>270</td>
</tr>
</tbody>
</table>

**Topics**

**Dissertations:** a list of dissertation topics will be released towards the end of the spring term with information on the selection process. Students are also encouraged to propose their own topics, in consultation with members of the teaching staff.

**Design Project:** as with dissertations, selection of the detailed design projects is towards the end of the spring term. The projects are:

- Tall Building Project
- Bridge Project
- Concrete Building Project

Further information on Dissertations and Design Projects (Conceptual and Detailed) including pre-requisite modules, are available from the following: [http://www.imperial.ac.uk/civil-engineering/prospective-students/postgraduate-taught-admissions/advanced-structural-engineering-cluster/syllabus/ci9-str-18/](http://www.imperial.ac.uk/civil-engineering/prospective-students/postgraduate-taught-admissions/advanced-structural-engineering-cluster/syllabus/ci9-str-18/)

**Supervision arrangements**

The nature of supervision that you will receive over the summer term varies depending upon whether you undertake a detailed design project or a research dissertation.

In the case of detailed design projects, a lead academic, often with support from industry, runs group tutorial sessions over the first six weeks of the projects. At these sessions, all students undertaking a particular design project receive information and feedback on their progress.

In the case of undertaking a research dissertation, you will receive one-to-one support from a member of academic staff. The particular arrangement in this case depend upon the nature of the dissertation topic and the preferences of the academic. During the initial weeks of the dissertation, most students will have weekly contact with their supervisors. The frequency of this contact typically reduces as the research progresses and students take greater ownership of their work.
It is important to understand that there is an expectation, and reward of marks, where there is evidence of critical thought, independent work and maturity of approach, in relation to both the detailed design project and the dissertation as show in the following

**Criteria for the Marking of Projects, Dissertations and Coursework Exercises**

In the case of major projects/dissertations, assessment should first be made under four general categories:

1. Evidence of enquiry, creative ability, critical thought
2. Level of understanding
3. Level of effort, competence and quality
4. Clarity and style of presentation (including Viva-Voce)

Particular value should be attached to work that is regarded as intellectually challenging. The project/dissertation should then be considered as a whole and its features matched against the written criteria as a benchmark.

<table>
<thead>
<tr>

</table>

**Note:** The projects also include a research component that accounts for 30% of the final grade. Marks in brackets ( ) denote the breakdown in mark allocations to be awarded for work of an investigative nature.
**Personal tutors and term reports (MSc students)**

You are assigned a Personal Tutor from the academic staff in the first week of term. Your personal Tutors will:

- Be a source of support, both pastoral and academic, with whom you can discuss any issues and turn to them for advice and help.
- Take an interest in your academic and professional development.
- Likely act as a future referee on your behalf.

You are required to meet with your Personal Tutor once during each term, and together complete a report from known as a Term Report, the completed report to be submitted to your Cluster Administrator, Ruth Bello.

- To keep a record of your academic progress.
- To keep a record of any health or other problems that you may encounter.
- To follow your professional development.
- To be informed of your outside interests and activities, which we consider part of your life at College.

Your term reports, which are included in Blackboard, will additionally be used:

- As a check-point on attendance (UKVI).
- To inform the Board of Examiners of any circumstances to be considered in mitigation in individual cases.

Further information on term reports including where to find them and submission dates will be provided by your Cluster Administrator.

**Reading Lists**

The College has introduced a new interactive system, Reading Lists, for students to view their reading lists, and create their own virtual library collections. Each of your modules on Blackboard Learn will include a direct link to the core and supplementary recommended texts on Reading Lists. You can also view where in the Central Library your recommended texts are available, and how many copies are available, as well as commenting and collaborating with other students.

http://www.imperial.ac.uk/admin-services/library/learning-support/reading-lists/

**Programme specification**

Programme specifications will be located here:

Transferring between courses

Students wishing to transfer between courses should first contact the member of staff below, who will advise you as to whether or not this may be possible. Please note that for MSc students, transfers must be requested by the end of the first cycle of lectures, and may be restricted, in particular for those students under Tier 4 Visa restrictions.

ℹ️ Ruth Bello
📍 Room 439
📧 r.bello@imperial.ac.uk
3. **Assessment**

The Advanced Structural Engineering cluster assessments are made up of two elements: examinations-coursework combined and projects (projects comprise Conceptual Design, Detailed Design and/or the Research Dissertation).

The cluster assessments comprise individual and group coursework submissions; projects and presentations; written and oral examinations and a research dissertation or detailed design project. To complete the requirements of the degree, all assessments must be undertaken to the appropriate level.

**Criteria for the award of the degree**

The MSc degree is awarded to any student who achieves all of the following:

1. An aggregate mark of 50% minimum in all examinations and associated coursework, AND
2. A mark of 50% minimum in the major project or dissertation, including the Conceptual Design Project.
3. In line with the policy on assessment of advanced postgraduate courses provided by Imperial College London, no compensation will be given in assessments in which a candidate has achieved less than 40% in one or more of the examination papers.

Provided that all three of the above criteria are satisfied, the MSc degree will be awarded in one of the following classifications:

(a) Pass (see above), or
(b) Pass with Merit would normally be awarded if the aggregate mark of all examinations and associated coursework is not less than 60% AND the mark for the dissertation is not less than 60% AND the MSc is completed in 12 months, or
(c) Pass with Distinction would normally be awarded if the aggregate mark for the examinations and associated coursework is not less than 70% AND the mark for the dissertation is not less than 70% AND the MSc is completed in 12 months.

The following are subject to discussion by the Board of Examiners
Mitigating circumstances

If you have a serious problem affecting your study, coursework, or examinations, you must ensure that you inform a member of staff immediately, this might be your Personal Tutor, a member of the administrative staff, or the Senior Tutor (Postgraduate) as soon as possible.

A wide variety of things can be considered in mitigation, from health issues (physical or mental, acute or chronic) to bereavement or financial hardship.

If something out of your control affects your ability to study or to take assessments then it may be considered as a mitigating circumstance.

Process:

- If these circumstances affect examinations or other assessments, you should submit a mitigating circumstances form to your Department within 5 working days of the assessment or coursework submission deadline.
- The form must be supported by appropriate documentation. A medical certificate is essential where illness affects an exam – telling someone afterwards is not sufficient.
- Please contact the Undergraduate Education Manager or Senior Tutor if a problem arises on the day of an exam.

Forms are available from the following: http://www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Please note:

- The College Health Centre cannot certify an illness if you have not been seen at the Health Centre during the illness.
- The College Student Counselling Service can only provide a letter on request if you already attend counselling.
- The College Disability Advisory Service can only help students to obtain appropriate evidence of disability prior to examinations taking place and are not able to certify for absences due to disability.

Mitigating circumstances policy and procedure (pdf)

For independent support and advice, please contact the Imperial College Union Advice Centre.

Unsatisfactory progress in year

For those students not attending or progressing to the satisfaction of the Cluster Director during the term, a note of warning may be issued to him/her. This is called a “six-week warning” and is the equivalent to notice of withdrawal. If there is not satisfactory improvement then withdrawal will be required. The regulations may be found at the following: https://www.imperial.ac.uk/media/imperial-college/administration-and-support-services/registry/academic-governance/public/regulations/2016-17/general/Student-Withdrawals-and-Appeals-Procedure_-Oct16.pdf
This may result in:

- (For Visa-dependent students) a report being sent to the UK-VI, and curtailment of the student Visa, and potentially revoking the right to remain in the UK.
- (For sponsored students) a report being made to your sponsors.
- Withdrawal from the programme.

**Progression from year to year**

In order to progress to the next year of the programme, students are required to:

1. Have an average performance mark for the year of 50% or better in the relevant element(s);
2. To have passed all individual components at a minimum of 50%*

*where the mark achieved in (an) individual component(s) is below the 50% pass mark, the Board of Examiners may, in certain cases, allow compensation. No compensation is allowed where the mark achieved is below 40%**

**Where a mark below 40% in an individual component is presented, the student is then permitted to re-take that component (normally by written examination paper) at the next opportunity, which is typically in the following year. Where the overall performance is below 50%, the student is permitted to re-enter for the elements of assessment in question, but not to attend or to progress to a subsequent year.

**Past examination papers**

Most academics will make available past examination papers and model answers to the Blackboard Learn VLE, or will work through example examination questions during tutorial sessions.

**The College’s Academic and Examination Regulations:**

http://www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

**Mitigating Circumstances Policy and Procedures:**

**College Policy on Exams and Religious Obligations:**

4. Examinations

Examination guidance and regulations

Materials Permitted in Examinations

- Pencil cases which must be clear plastic.
- College identity cards (i.e. swipe card) which must be displayed on your desk.
- Pens, erasers and other drawing instruments as required.

Unless specified or designated “Open Book”, no additional materials may be introduced into examinations by candidates. If, in the opinion of the Board of Examiners, such materials are required, they will be provided or notified to all candidates and the standard examination rubric amended to state that they will be provided or allowed. Calculators will be provided by the Department. We are currently using Casio FX85GTplus. Dictionaries are not permitted.

No food is permitted in an examination room unless prior permission has been given due to medical need. No drinks are permitted except for water in clear plastic bottles.

Conduct of Examinations

- Be prepared.
- Take with you only the items listed above.
- Arrive 15 minutes before the exam is scheduled to begin.
- When you enter the examination room, do so in SILENCE.
- Switch off your phones (and other electronic devices) and place them in your bag.
- Apple Watches are not permitted.
- Leave your bags in the area indicated by the Invigilator or Supervising Academic.
- Find the desk with the examination card which has your candidate number (or name) on it, then sit down at this desk.
- **DO NOT** turn over or open your examination paper until you are instructed to do so by the Invigilator. However you may start to fill in the front of your answer book giving:
  1. Candidate number (CID).
  2. Degree (Subject).
  3. Title of Paper.
  4. Date.
- You **MAY NOT SPEAK** to anyone other than the Invigilator. If you do need to speak to the Invigilator, raise your hand. Speak in a quiet voice so as not to disturb the other candidates.
- Write in **black or blue** ink. Candidates are not permitted to use red or green ink, or to use any writing implement that is capable of producing red or green marks on the script. You should **not** write in pencil.
- If unsure of the meaning of a word or question in the examination, write down your interpretation of that word or question, and continue.
- The use of correction fluids (e.g. Snopake® and Tippex®) is explicitly not permitted.
- Candidates should indicate incorrect work by drawing a single diagonal line through the work concerned.
• At the end of the examination, stop writing when instructed to do so by the Invigilator or Supervising Academic.
• Ensure that your answer book and all supplementary papers carry your College Identifier Number (which is also your candidate number), and that all graph paper and supplementary answer books are securely tied together inside the back cover of the main answer book.
• Remain seated and silent.
• When all examination materials have been collected by the examination team and you have been told you may leave, please do so in silence, collecting your belongings on the way out. You may not remove any examination material from the room.

Exam Technique

• Read the rubric carefully BEFORE answering any questions.
• Take some time to read through the questions and make a sensible decision as to which questions to tackle.
• Ask yourself:
  o Which questions can I answer fully?
  o Out of the questions I cannot answer fully, which ones can I answer the majority of?
  o Am I fulfilling the exam rubric? You must make sure you have understood the rubric; ask your invigilators if you need clarification.
  o Example: How much time should you spend answering each question? If there are five questions to complete in three hours, that is approximately 36 minutes per question.
• If you make a mistake just put a line through your work.
5. Plagiarism

1. Introduction to Plagiarism

You are reminded that all work submitted as part of the requirements for any examination (including coursework) of Imperial College must be expressed in your own words and incorporate your own ideas and judgements.

Plagiarism, that is the presentation of another person’s work, thoughts or words as though they were your own, must be avoided, with particular care in coursework, essays and reports written in your own time. Note that you are encouraged to read and criticise the work of others as much as possible. You are expected to incorporate this in your thinking and in your coursework and assessments, but you must acknowledge and label your sources.

Direct quotations from the published or unpublished work of others, from the internet, or from any other source must always be clearly identified as such. A full reference to their source must be provided in the proper form and quotation marks used. Remember that a series of short quotations from several different sources, if not clearly identified as such, constitutes plagiarism just as much as a single unacknowledged long quotation from a single source. Equally, if you summarise another person’s ideas or judgements, figures, diagrams or software, you must refer to that person in your text, and include the work referred to in your reference list or bibliography. Staff are able to give advice about the appropriate use and correct acknowledgement of other sources in your own work.

The direct and unacknowledged repetition of your own work which has already been submitted for assessment can constitute self-plagiarism. Where group work is submitted, this should be presented in a way approved by your Department. You should therefore consult your tutor or course director if you are in any doubt about what is permissible. You should be aware that you have a collective responsibility for the integrity of group work submitted for assessment.

The use of the work of another student, past or present, constitutes plagiarism. Where work is used without the consent of that student, this will normally be regarded as a major offence of plagiarism.

Failure to observe these rules may result in an allegation of cheating. Cases of suspected plagiarism will be dealt with under the College’s Exams, Assessments and Regulations, & Plagiarism, Academic Integrity & Exam Offences, a full copy of which can be found at the following: http://www.imperial.ac.uk/student-records-and-data/for-current-students/undergraduate-and-taught-postgraduate/exams-assessments-and-regulations/ and is likely to result in a penalty being taken against any student found guilty of plagiarism.

There have been in the past a few cases of plagiarism in this Department, where we operate a zero-tolerance policy, leading to penalties that range from voiding a coursework mark to expulsion from the course. In the majority of these cases, plagiarism was the result of poor practice and lack of awareness, so you are strongly advised to familiarise yourself with what constitutes plagiarism and to seek clarification if and when in doubt.
2. Ethics and Academic Integrity

There are at least two very good reasons why plagiarism should be allowed no place in the academic business of Imperial College, and why it must therefore be met by severe punishment whenever it is encountered.

At its most fundamental, plagiarism is seeking to deceive somebody – one’s teachers or examiners, for example – by presenting the ideas of another person as though the ideas were one’s own – whether with that person’s assistance, or by theft. Deception and intellectual theft are morally unacceptable in any well-ordered society. In a society of professionally licensed engineers, such conduct is even more reprehensible in that it undermines the ethical foundation on which professional practice is based.

There is also a question of academic integrity. Students who knowingly use plagiarism as a painless way of compiling the work needed for assessments, and teachers who knowingly allow students to do it, are both contributing to a blight that undermines the quality and integrity of the degree qualification.

Students under intense pressure to produce a design, a technical report, or a dissertation may feel tempted to resort to plagiarism. They must resist. The Imperial College degree is highly prized because it is respected far and wide as a true mark of achievement. To safeguard the integrity of its degrees, Imperial College staff must take action whenever plagiarism is suspected. As for students, they must expect that the penalty for a student who is guilty of this offence will normally be severe.

3. Definition of Plagiarism

Plagiarism is the presentation of another person’s thoughts, words, images or diagrams as though they were your own – for example when you copy someone else’s work or use their ideas in your coursework, thesis, report etc, and then do not acknowledge that you have done this.

**Definition:**

"The wrongful appropriation or purloining, and publication as one’s own, of the ideas, or the expression of the idea (literary, artistic, musical, mechanical, etc.) of another."

Other forms of plagiarism include self-plagiarism, which involves using your own prior work without acknowledging its reuse; and collusion, which involves sharing or copying (individual) coursework.

Plagiarism, whether intentional or unintentional, is considered a cheating offence and must be avoided, with particular care on coursework, essays, reports and projects written in your own time, and also in open and closed book written examinations.

Plagiarism is classified as either Minor or Major in nature, this is normally determined by the weight, or marks value, attached to the work submitted. However, the following would also be classified as major:
- Two cases of Minor plagiarism by the same individual
- Copying the work of another student without their knowledge
- Dissertation/Major Project
- Where the student does not admit that plagiarism has occurred, and that the plagiarism offence is upheld on appeal.

You are not permitted to act in collusion with another student or person, nor are you permitted to request or arrange for another individual to submit your coursework for you.

**You must NEVER:**

- Share your coursework, either electronically or in paper copy. If copying of material occurs as a result of such sharing, both parties are considered to have actively taken part in plagiarism.
- Give your coursework, whether electronically or in paper copy, to someone else to submit. If copying of material occurs as a result of such activity, both parties are considered to have actively taken part in plagiarism.

### 4. Collaboration (joint & group work) and Collusion

Students can struggle to understand the difference between collaboration and collusion.

**Collaboration:** Unlike collusion (where the work of another student is intentionally used with that student’s consent) which equates to deception, collaboration is encouraged as a professional skill much needed in engineering work. Collaboration involves mutual effort and joint work, to the benefit of all the parties involved, and where appropriate it should always be acknowledged, via footnotes for example. Students required to submit individual pieces must be clear on the distinction between the two.

Discussing coursework exercise submission with colleagues is fine: – *what does the teacher expect from the work, what different approaches might there be, how much detail would be needed, how structured should the report be?* In exploring with a colleague a range of approaches, or how to obtain specific solutions, one finds a positive help in learning something new. However, if the work is required to be an individual submission, then a line must be drawn where joint work is left behind and the individual work which is submitted for assessment should take over.

The results or calculations that form the basis of the report should be obtained by the individual student who is submitting the report as his/her own work, unless there is a clear expectation that others would be involved – as in the results of a survey – but then the contribution of the others should be made clear (for example, as footnotes in the report). The student is expected to write the report in his/her own words, to think of his/her own interpretations of the results and to make his/her own conclusions and recommendations.

Group work, for example group design projects, is work which is set by the teacher for joint working between two or more students and in which it is clearly understood that the teacher will give the assessment for the joint work undertaken. This provides valuable working experiences and learning opportunities, but these high-minded intentions can be severely
undermined if any member of the group should not contribute in equal measure with his/her colleagues.

A student should always assume that coursework is individual work, unless it is clear that group assessment is planned by the teacher. If in doubt, seek the teacher’s advice about what working practices are acceptable. Do not hand over your work, under any circumstances, to another student.

Collusion: Where the work of another student is used with that student’s consent.

5. Exam Offences and Dishonest Practice

Exam offences include behaviour such as bringing authorised material into an exam, attempting to communicate with others apart from the invigilator, trying to remove examination material without permission, taking an exam for someone else or getting someone else to take an exam for you.

Examples of dishonest practice include bribery, contact cheating (buying work from an essay mill or other individual to submit as your own), attempting to access exam papers before the exam, making a false claim for mitigating circumstances or providing fraudulent evidence, falsifying documentation or signatures in relation to assessment.

6. Referencing

The recommended method of referencing is the Harvard style (author-date). All students have free access to RefWorks, an online reference management software package. More information is at the library website:

http://www.imperial.ac.uk/admin-services/library/learning-support/reference-management/

and library staff will provide training (contact details in section 6).

7. Advisory Services

Academic Staff

Your main source of information, and the College’s main source for the recognition of plagiarism, is the academic staff. Please be aware that you can approach them for advice and information if you are unsure or require clarification.

The Library

You can contact your librarian for advice, either in person or by emailing:

Liaison Librarian: Nicole Urquhart, n.urquhart@imperial.ac.uk

Department Librarian: Callum Munro c.munro@imperial.ac.uk

If you do have a query about a reference layout, include as much information as you have about the item you need help with.
The Central Library provides several sources of further information relating to referencing and plagiarism awareness:

- A guide to referencing and citing correctly, including how to use the Harvard style is available at http://www.imperial.ac.uk/admin-services/library/learning-support/reference-management/

- Further information about plagiarism awareness within College, please see the library website at http://www.imperial.ac.uk/admin-services/library/learning-support/plagiarism-awareness/

- In addition you can access the Library’s online Blackboard course, “Ensuring Integrity 1: Plagiarism Awareness” for Master’s students, using your College username and password. The course is available at http://bb.imperial.ac.uk and contains a section on plagiarism and how to avoid it.

**Turnitin-UK**

TurnitinUK is an online service hosted at www.submit.ac.uk that enables institutions and staff to carry out electronic comparison of students’ work against electronic sources including other students’ work. Once papers have been submitted to the system they become part of the database, and will be used for future checking.

**IP / Data Protection**

Some people have asked whether departments need to seek permission from students before submitting their work to a plagiarism detection system. The answer is no as the registration form, which is signed by students, states the following:

The College may submit your coursework to an external plagiarism detection service. By registering with the College, you are giving your consent for any of your work to be submitted to such a service.

**JISC Plagiarism Advice.org**

www.plagiarismadvice.org/

Emphasis is on academic good practice from the lecturer’s perspective, but the service can also provide help to students.

**8. Submission of Individual Items of Coursework**

Copying the work of others without acknowledgement of the source of the information is academic fraud, known as plagiarism. Wilfully copying is outright cheating, forgetting to list references and reference material is ineptitude. Neither form of plagiarism is acceptable and may well result in one or more parties, deemed to be involved, being awarded a mark of zero.
All coursework, project work and research submissions, including dissertation must contain the following statement, signed by the student.

Declaration: I confirm that this submission is my own work. In it, I give references and citations whenever I refer to, describe or quote from the published, or unpublished, work of others.

Signature:___________________

Failure to submit the signed declaration with all written works will result in their being unmarked, or returned with a mark of zero.

An example of a Coursework Cover Sheet is given in Appendix E.

More information on the actions taken by the Department following cases of suspected plagiarism will be provided to you at the time that you are given your first coursework assignments.
6. Board of examiners

The Board of Examiners for the Advanced Structural Engineering MSc cluster includes:

CHAIR

- Professor Ahmer Wadee

EXAMINATIONS OFFICER

- Dr Peter Stafford

SECRETARY

- Ruth Bello

MEMBERS: All staff involved in the delivery, setting, and marking of assessment for the programmes.

External Examiners

- Professor Rita Bento, Instituto Superior Tecnico, Lisbon
- Professor Miguel Angel Astiz, Universidad Politécnica de Madrid, Madrid

It may happen that Master's level students to have some form of academic or social interaction with their external examiners at some point during or after their studies as well as during the assessment process itself.

It is inappropriate for you to submit complaints or representations direct to external examiners or to seek to influence your external examiners. Inappropriate communication towards an examiner would make you liable for disciplinary action.

External examiners reports digests can be found here:

7. Location and facilities

Imperial has a number of campuses in London and the South East. All have excellent travel links and are easily accessible via public transport.

Your main location of study will be:

Department of Civil and Environmental Engineering
Skempton Building
South Kensington Campus
Imperial College London
London SW7 2AZ

The Skempton building can be accessed from 07.00-00.00 daily. The main entrance requires the use of your college ID card between the hours of 07.00-08.00 and 18.00-00.00. During weekends and vacation periods you will be required to use your college ID card each time you enter and exit the building.

Smoke-Free Policy

All Imperial campuses and properties are smoke-free. This means that smoking by staff and students is not permitted on or within 20 metres of College land. The policy covers all College properties, including student accommodation and sports grounds.

www.imperial.ac.uk/smoke-free

Facilities

PC laboratories

The Skempton Building houses three PC laboratories located in rooms 208, 314, and 317. These facilities are shared with the Department of Aeronautics and the Department of Mechanical Engineering. They are open to all registered students of the aforementioned Departments from 08.00-22.30 daily, except when timetabled for classes. Further PC facilities are available in, and shared with, the City and Guilds Building, and the College’s Central Library.

A full list of the College rules regarding computer use are available at:

http://www.imperial.ac.uk/admin-services/ict/

Shared teaching space

The Faculty of Engineering is committed to utilising its facilities and teaching space, hence there are a number of shared teaching spaces between Departments/Buildings. Teaching space in the Skempton Building is often timetabled to accommodate lectures between the Civil and Environmental, Mechanical, and Aeronautical Engineering Departments.

</table>

(P) denotes rooms which are Panopto-enabled.
While the Department of Civil and Environmental Engineering is housed in the Skempton Building, teaching may also be delivered outside of Skempton, primarily in the City and Guilds Building.

Within the Skempton Building, the teaching areas are to be found on levels 0, 1, 2, 3, and 6, with the exception of the teaching laboratories which are located on levels 0, 1, 2, and 5. 
http://www.imperial.ac.uk/engineering/students/current/teaching-spaces/

College ID cards
For MSc students who have uploaded their photos and registered online, ID cards can be collected from the General Office, Skempton Building following confirmed attendance at the day 2 Health and Safety induction. For those who have their photos taken on arrival, the ID card is normally available from the General Office in the Skempton Building within two days.

ICT resources
Find information on activating your College account, connecting to Wifi, using the Virtual Learning Environment (Blackboard Learn), and more ICT resources available for new students, visit: http://www.imperial.ac.uk/admin-services/ict/new-to-imperial/students/

Printing and binding
There are five multi-function printers in the Skempton Building. The first is in room 317, two are located in the BOSS Space on level 2, and a further two in room 218 adjacent the BOSS Space.

Additionally the Service Point Print Shop is located in room 024 of the Sherfield Building. Service Point can be contacted by email at: imperial.college@servicepointuk.com

There are networked printers across the South Kensington Campus, which you can access with your College ID card. When you print a document it is sent to a common print queue, meaning that you can collect it from any touch card printer that your College ID card gives you access to, including the Central Library and Departments across the Campus.
http://www.imperial.ac.uk/admin-services/ict/self-service/computers-printing/printing/

Lockers
There are 312 lockers located on Level 3, Skempton, of which 156 have been allocated to MSc students. If you would like to be allocated a locker you need to complete the relevant form below. Lockers can only be allocated to full time students. Numbers are limited and allocated on receipt of the form:
https://skempton.wufoo.eu/forms/lockermscapplicationform201819/

The Department’s Postgraduate/General Office is located in room 118 in the ground floor of the Skempton Building, open Monday-Friday 08.00-17.30.
**Lost property**

If you think you have lost something within the Department your first port of call is the Reception. If it is not there you should check with the Security Office in Sherfield as it may have been handed in there. (If an item is handed in with ID, an email will be sent to the owner immediately to inform them).

All items found within the Department (e.g. keys/phones/bags) should be handed into the Reception. All items found outside the Department should be handed into the Security Office in the Sherfield Building in the South Kensington campus. [http://www.imperial.ac.uk/estates-facilities/security/lost-and-found-property/](http://www.imperial.ac.uk/estates-facilities/security/lost-and-found-property/)

**Facilities management**

Showering facilities are available within the Department, and are located in the toilets on levels 0 and 3.

Bicycles are not permitted within the Department. This is College policy. The following link provides information on suitable bicycle storage within the South Kensington Campus:

[http://www3.imperial.ac.uk/estatesfacilities](http://www3.imperial.ac.uk/estatesfacilities)

**Room bookings**

Room bookings on weekdays during term-time may be requested via an online form, or in person at the Postgraduate/General Office. This form is to be used only for room booking requests in the Skempton Building: [https://skempton.wufoo.eu/forms/room-bookings-20182019/](https://skempton.wufoo.eu/forms/room-bookings-20182019/)

Please note: **We do not make room bookings for Imperial College Union Societies.** These need to be made via the Student Union.

Room booking requests outside of normal College hours should be made via the Conference Office: conferenceandevents@imperial.ac.uk

**Shuttle bus**

A free shuttle bus runs between our South Kensington, White City and Hammersmith Campuses on weekdays. Seats are available on a first-come, first-served basis. You need to show your College ID card to board. Download the timetable at: [www.imperial.ac.uk/estates-facilities/travel/shuttle-bus](http://www.imperial.ac.uk/estates-facilities/travel/shuttle-bus)

**Maps**

Campus maps and travel directions are available at: [www.imperial.ac.uk/visit/campuses](http://www.imperial.ac.uk/visit/campuses)

**Accessibility**

Information about the accessibility of our South Kensington Campus is available online through the DisabledGo access guides: [www.disabledgo.com/organisations/imperial-college-london-2](http://www.disabledgo.com/organisations/imperial-college-london-2)
8. Working while studying

If you are studying full time, the College recommends that you do not work part-time during term time. If this is unavoidable we advise you to work no more than 10–15 hours per week, which must be principally at weekends and not within normal College working hours.

Working in excess of these hours could impact adversely on your studies or health.

If you are here on a Tier 4 visa you are not permitted to work more than 20 hours a week during term time. Some sponsors may not permit you to take up work outside your studies and others may specify a limit.

If you are considering part-time work during term time you are strongly advised to discuss this issue with your supervisor/cluster administrator/course director. If you are on a Tier 4 visa you should also seek advice from the International Student Support team regarding visa limitations on employment.

Please refer to our policy on working while studying:

https://www.imperial.ac.uk/study/international-students/visas-and-immigration/work-rules-during-your-studies/
9. Health and safety

You are responsible for looking after your own health and safety and that of others affected by your College-related work and leisure activities. You must:

- Comply with all local and College policies, procedures and codes of practice and with the arrangements which the College has in place to control health and safety risks.
- Ensure that your activities do not present unnecessary or uncontrolled risks to yourself or to others.
- Attend appropriate induction and training.
- Report any accidents, unsafe circumstances or work-related ill health of which you become aware to the appropriate person.
- Not interfere with any equipment provided for Health and Safety.
- Inform your supervisor or the person in charge of the activity in cases where you are not confident that you are competent to carry out a work or leisure activity safely, rather than compromise your own safety or the safety of others.

The College’s Health and Safety Policy can be found at:

Your Departmental safety officer is:

- Dr Geoff Fowler
- Room 413, Skempton Building
- 020 7594 5973
- g.fowler@imperial.ac.uk

You are required to complete inductions and attend training sessions to safely complete this course. These include:

- Health and Safety induction, at which a checklist must be completed, signed by the student, and a relevant member of staff (Note: ID cards, available from the Postgraduate/General Office will only be given to those presenting the completed and signed Health and Safety checklist).

A copy of the Department Health and Safety Booklet can be found in Appendix F.

The College Safety Department

The Safety Department offers a range of specialist advice on all aspects of safety. This includes anything which you feel might affect you directly, or which may be associated with teaching, research or support service activities.

The College’s activities range from the use of hazardous materials (biological, chemical and radiological substances) to field work, heavy or awkward lifting, driving, and working alone or late.
All College activities are covered by general health and safety regulations, but higher risk activities will have additional requirements.

The Safety Department helps departments and individuals ensure effective safety management systems are in place throughout the College to comply with specific legal requirements.

Sometimes the management systems fail, and an accident or a near-miss incident arises; it is important that we learn lessons from such situations to prevent recurrence and the Safety Department can support such investigations. All accidents and incidents should be reported online via the “SALUS” online tool. This can be accessed via:

- www.imperial.ac.uk/safety

To report concerns or to ask for advice you should contact your programme director, academic supervisor or departmental safety officer in the first instance. You may also contact the Safety Department directly.

**Occupational Health requirements**

The College Occupational Health Service provides services to:

- Protect health at work.
- Assess and advise on fitness for work.
- Ensure that health issues are effectively managed.

The Service promotes and supports a culture where the physical and psychological health of staff, students and others involved in the College is respected, protected and improved whilst at work.

- www.imperial.ac.uk/occupational-health

**Communications**

It is not possible to provide a service for incoming telephone messages except in the case of emergency. Please ensure that your family/next of kin are aware of the following contacts:

**Civil Engineering General (Postgraduate) Office**
- 00 44 (0) 207 594 5929 (Fionnuala Donovan)
- 00 44 (0) 207 594 5932 (Yamini Chikhlia)
- 00 44 (0) 207 594 5931 (Melanie Hargreaves)
- 00 44 (0) 207 594 6123 (Angela Frederick)

**Structural Engineering**
- 00 44 (0) 207 594 6040 (Ruth Bello)
Please ensure that your student-e-service contact details are up-to-date at all times, including your next-of-kin-contact information.

The Department is not able to provide a postal or fax service.

**Working alone and emergency contact numbers**

It is prohibited under College safety regulations for any person to work alone in a laboratory or workshop at any time. At least one other person must be within calling distance. All members of the College must know how to contact the College’s emergency response services.

Please save the following number in your mobile/cell phone for use in all emergencies anywhere on the College’s South Kensington campus – including where an ambulance is felt to be needed, the call will go direct to the College Security Control Desk: 020-7589-1000. The Security team are on duty 24/7 and will assess the emergency and implement the necessary response for the situation (including calling the London Emergency services).

If using an internal College phone, the number to call is 4444.

Any activity involving tools or machinery is deemed to be "working in a laboratory or workshop"; purely office or computing activities are excluded.

(Full details are given at the front of the orange Safety Booklet – see Appendix F.)
10. College policies and procedures

Regulations for students

All registered students of the College are subject to the Regulations for Students, the College Academic and Examination Regulations and such other regulations that the College may approve from time to time.

www.imperial.ac.uk/about/governance/academic-governance/regulations
www.imperial.ac.uk/students/terms-and-conditions

Appeal and complaints procedures

We have rigorous regulations in place to ensure assessments are conducted with fairness and consistency. In the event that you believe that you have grounds for complaint about academic or administrative services, or wish to appeal the outcome of an assessment or final degree, we have laid out clear and consistent procedures through which complaints and appeals can be investigated and considered:

www.imperial.ac.uk/about/governance/academic-governance/academic-policy/complaints-appeals-and-discipline

Academic integrity

You are expected to conduct all aspects of your academic life in a professional manner. A full explanation of academic integrity, including information on the College’s approach to plagiarism is available on the Student Records and Data website:

Intellectual property rights policy

For further guidance on the College’s Intellectual Property Rights Policy, please contact the Research Office:

www.imperial.ac.uk/research-and-innovation/research-office/ip

Use of IT facilities

View the Conditions of Use of IT Facilities:

http://www.imperial.ac.uk/admin-services/ict/self-service/computers-printing/staff-computers/conditions-of-use-for-it-facilities/
11. Well-being and advice

Student Space

The Student Space website is the central point for information on health and well-being.

🌐 www.imperial.ac.uk/student-space

Director of Student Support

The Director of Student Services has overall responsibility for all matters relating to student support and well-being.

🌐 http://www.imperial.ac.uk/student-space/here-for-you/director-of-student-services/

Departmental support and College tutors

Your Department has a system of academic and pastoral care in place to make sure you have access to the appropriate support throughout your time here. We have a collective responsibility to ensure that during your time with us, you feel that you are working in a safe and supportive environment. You should feel free to approach any member of staff at any time. If they cannot provide immediate assistance, they will be able to signpost you.

The greatest source of support you will have is your own fellow students. If you are concerned about a fellow student, then you should feel comfortable in approaching a member of staff for guidance. Any such approaches will be treated with sensitivity.

Details of trained First Aiders and Mental Health First Aiders are located in the lifts and on notice boards around the Skempton Building – and included in the Health and Safety (orange) section of this handbook.

Senior Tutor (Postgraduate)

In the event of an issue arising, within the Department there are a number of avenues for you to seek support. This will include your departmental Senior Tutor (Postgraduate), Dr Ana Ruiz-Teran, and other designated staff such as programme directors and administrative staff.

Faculty Senior Tutor

There are a number of avenues within the College to seek help with academic or pastoral matters: http://www.imperial.ac.uk/student-space/. In the event that you would like to seek additional support or guidance, or that you wish to air your issues in confidence, the Faculty Senior Tutor, Dr Lorraine Craig, can be contacted by email l.craig@imperial.ac.uk in the first instance. Depending on the nature of your query, it may be passed onto other more relevant staff.
Advice services
The tutor system is complemented by a College-wide network of advice and support. This includes a number of specialist services.

Careers Service
The Careers Service has strong links to your Department and you will have a named Careers Consultant and Placement and Internship Adviser who will run both group sessions and individual meetings within your Department. You can arrange to meet with your linked Careers Consultant or Placement and Internship Adviser either in your Department or centrally on Level 5 Sherfield where the Careers Service is based.

Visit the Career Service’s website to:
- Book a careers appointment
- Find resources and advice on successful career planning

www.imperial.ac.uk/careers

Counselling and Mental Health
The Student Counselling and Mental Health Advice Service offers short-term counselling to all registered students. The service is free and confidential. Counsellors are available at the South Kensington, Hammersmith and Silwood Park Campuses.

www.imperial.ac.uk/counselling

Financial support and tuition fees
If you’ve got any questions about student financial support (loans, scholarships and research council studentships, US and Canadian loans) then contact the Student Financial Support team:

- 020 7594 9014
- student.funding@imperial.ac.uk

If you suddenly find yourself in financial difficulties or experience an unexpected change in circumstances, you may be eligible to apply for emergency financial help through the Student Support Fund. The Fund offers a one-off payment of up to £2,000 to cover such emergencies as last minute accommodation and travel necessities, equipment and childcare. It does not have to be repaid.

http://www.imperial.ac.uk/students/fees-and-funding/financial-assistance/student-support-fund/

For tuition fees queries, contact the Tuition Fees team:

- 020 7594 8011
- tuition.fees@imperial.ac.uk
Imperial College Union (ICU) Advice Centre

Imperial College Union runs the Advice Centre independently of the College with advisers on hand to provide free, confidential, independent advice on a wide range of welfare issues including housing, money and debt, employment and consumer rights, and personal safety.

www.imperialcollegeunion.org/advice

Student Hub

The Student Hub represents a single point of contact for all key administrative information and support. The Student Hub team can help you with enquiries about:

- Accommodation (including checking contracts for private accommodation)
- Admissions
- International student enquiries
- Research degrees
- Student financial support
- Student records
- Tuition fees

Level 3, Sherfield Building, South Kensington Campus

020 7594 9444

student.hub@imperial.ac.uk

www.imperial.ac.uk/student-hub

Health services

NHS Health Centre and finding a doctor

Even if you’re fit and healthy we recommend that you register with a local doctor (GP) as soon as you arrive in London. For help finding your nearest GP see the Student Space website:

www.imperial.ac.uk/student-space/here-for-you/find-a-doctor

There is an NHS Health Centre on our South Kensington Campus which you may visit during clinic hours if you’re feeling unwell. Students living within the practice catchment area are encouraged to register with the Centre.

www.imperialcollegehealthcentre.co.uk

NHS Dentist (based in the Health Centre)

Imperial College Dental Centre offers a full range of NHS and private treatment options.

www.imperial.ac.uk/student-space/here-for-you/dentist
Disability support

Disability Advisory Service

The Disability Advisory Service provides confidential advice and support for all disabled students and students with specific learning difficulties.

If you think you may have dyslexia or another specific learning difficulty but have never been formally assessed, the Disability Advisory Service offers initial screening appointments.

Room 566, Level 5, Sherfield Building, South Kensington Campus

020 7594 9755

disabilities@imperial.ac.uk

www.imperial.ac.uk/disability-advisory-service

Departmental Disability Officers

Departmental Disability Officers are the first point of contact within your department. They can apply for additional exam arrangements on your behalf, and will facilitate support within your Department.

Your Departmental Disability Officer is

Mrs Louise Green

Undergraduate Office, Room 401

020 7594 6045

l.green@imperial.ac.uk

More information on Departmental Disability Officers is available at:

www.imperial.ac.uk/disability-advisory-service/support/ddos

More information on procedures for the consideration of additional exam arrangements in respect of disability is available at:

If you have any issues regarding a disability that you would like to discuss with your Department, or if you believe you will require special examination arrangements due to a disability, please feel free to speak to Mrs Louise Green in Room 401, or email for an appointment.
Library and IT

Information and Communications Technologies (ICT)

If you’re having problems with technology (including computers, laptops and mobile devices), you can get help from ICT’s Service Desk.

📞 020 7594 9000

🌐 www.imperial.ac.uk/ict/service-desk

Software store

The Software store offers a variety of general and subject specific software programs and packages for free or at a discounted price for Imperial students.

🌐 www.imperial.ac.uk/admin-services/ict/shop/software

Central library

The Central Library at South Kensington is open around the clock pretty much all year. Make sure you find out who your departmental librarian is as they’ll be able to help you find resources for your subject area. Also, don’t forget to check out the Library’s range of training workshops and our other campus libraries for access to specialist medicine and life sciences resources. Alongside these physical spaces and resources, the Library provides over 170,000 electronic books, journals and databases available both on and off campus and a free document delivery service to help you source books and articles from around the UK and the rest of the world:

🌐 www.imperial.ac.uk/library

Departmental library

The Civil Engineering Library provides a space for the exclusive use of students and staff of the Department. Funded by the Department, the Library hosts a collection of around 15,000 books, 400 online and print journal titles, a large collection of reports from industry, and historical collections. During term time it is open from 09.00 to 19.00, Monday-Thursday, and 09.00-17.00 on Fridays.

Our dedicated Librarian offers support with coursework and information skills in one-to-one or group formats. The Library engages with students via Twitter @CivEngLib.

Further information about the library and its services is available from the library staff and from the Departmental Library webpage:

👤 Callum Munro

📍 Departmental Library, Room 402

🌐 http://www.imperial.ac.uk/civil-engineering/about-us/library/
Institution of Civil Engineers Library (ICE)

The library located at the Institution of Civil Engineers (ICE) is home to the world's largest dedicated collection of civil engineering materials. In addition to printed books and journals, the ICE library also offers access to a number of digital services, including e-books and advanced search tools, and a quiet place to work. All ICE members can borrow up to three items in person, or by post.

Institution of Civil Engineers Library
1 Great George Street, London, SW1P 3AA
020 7665 2251
library@ice.org.uk
https://www.ice.org.uk/disciplines-and-resources/ice-library-and-digital-resources

Religious support

The Chaplaincy Multi-Faith Centre has chaplains from many different religions, as well as prayer rooms and information on places of worship. In addition, it runs meditation classes and mindfulness workshops for stress management. There is a student-run Islamic prayer room on campus and separate areas available for male and female Muslims.

www.imperial.ac.uk/chaplaincy

Support for international students

English language support

The Centre for Academic English provides free in-sessional English courses for international students while they are studying. These include classes and workshops on academic language, social language, the four skills of reading, writing, listening and speaking, 1-1 consultations with a tutor to work on a piece of academic writing or an oral presentation, self-study resources in the VLE Blackboard, and the Conversation Project, which partners students with a native-speaker volunteer to practise social and conversational English.

www.imperial.ac.uk/academic-english

International Student Support team

Students from outside the UK make up around half of our student population, so our International student Support team offers year-round support to help our international students settle into Imperial life. This includes UK visa and immigration advice and trips to different places of interest.

www.imperial.ac.uk/study/international-students
12. Student records and data

The Student Records and Data team are responsible for the administration and maintenance of the student records for all students studying at the College. This includes enrolments, programme transfers, interruption of studies, withdrawals and processing of examination entry for research degree students. The team also use this information to fulfil reporting duties to the Student Loans Company, Transport for London and the UKVI, as well as other external bodies.

The team is currently responsible for the processing of student results and awards on the student record system as well as the production and distribution of academic transcripts and certificates of award.

Student Records and Data produce a variety of standard document requests for both current and previous students including:

- Statement of attendance
- Transcripts
- Confirmation of degree
- Visa letters / CAS
- Letter to open a bank account
- Council Tax exemption certificates

Appeal administration also sits within the team, as does the responsibility for confirming qualifications via the Higher Education Degree Datacheck service.

Student records and examinations

13. Work-life balance

The pace and intensity of postgraduate study at Imperial can be demanding so it’s important to find time for outside interests.

Civil Engineering Society (CivSoc)

The Civil Engineering Society is the departmental student society, of which all Undergraduate and Postgraduate students are automatically members. Run by an elected committee of students, CivSoc is one of the most active departmental societies in the College and organises regular events throughout the academic year. These include numerous lunchtime lectures given by industrial companies, site visits, social events and parties. The highlight of the CivSoc year is the extremely popular international trip in the spring, open to all students in the Department. Additionally, CivSoc writes and publishes the departmental student newspaper LIVIC.

All students are encouraged to participate in CivSoc-run activities. Announcements concerning upcoming events and society news are emailed to all members, displayed on the screen in the second floor Breakout Student Space, as well as being available on CivSoc’s website and social media pages.

Chair: Hippolyte Mounier-Vehier
Secretary: Elena Sakka
Treasurer: Dalia Lister
LIVIC Editor: Thibault Audic
Events Officer: Joshua Lim
Industrial Liaison Officer: Alexis de Germay de Cirfontaine
Tour Officer: Inigo Basterretxea Jacob
Treasurer: Hein Zaw (William)
Alumni and Mums & Dads: Dorian Sabathier
Department Representative: Ottilie Liu
Imperial College Union

The Union’s range of 375+ student-led clubs, societies and projects is one of the largest of any UK university, opening up lots of ways for you to enjoy your downtime.

www.imperialcollegeunion.org/about-us

Graduate Students’ Union

The Graduate Students’ Union is the postgraduate arm of Imperial College Union. The GSU works alongside the Imperial College Union President to ensure that the requirements of postgraduate students are catered for. It also organises a number of academic and social events during the year.

www.union.ic.ac.uk/presidents/gsu

Physical Activity Sport

Imperial College has a wide range of sports and activities on offer that cater for all standards and abilities. We have a recreational activity offer, competitive sports teams and an elite sport programme. We are dedicated to ensuring we have a diverse, inclusive and exciting offer for all.

With an annual fee of £30 you will get use of the gym and swimming facilities on our campuses.

www.imperial.ac.uk/sport
http://www.imperial.ac.uk/ethos/
14. Student feedback and representation

Feedback from students

The College and Union is committed to continually improving your education and wider experience and a key part of this is your feedback. Feedback is thoroughly discussed by your student representatives and staff.

Student representation

Student Representatives are recruited from every department to gather feedback from students to discuss with staff. More information about the role, and instructions on how to become an academic representative, are available on the Imperial College Union (ICU) website: www.imperialcollegeunion.org/your-union/your-representatives/academic-representatives/overview

Due to the number and complexity of our MSc programme configuration, elections to the positions of Programme Student Representatives are managed within the Department. You will be advised of the processes, both on self-nomination for the positions, and the selections processes, during the cluster induction sessions. Typically we look for one representative from each of the core programmes.

Staff-Student Committee

The Staff-Student Committee is designed to strengthen understanding and improve the flow of communication between staff and students and, through open dialogue, promote high standards of education and training, in a co-operative and constructive atmosphere. College good practice guidelines for staff-student committees are available here: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/student-feedback

There are three committees: Undergraduate, Master’s and Research Students/Staff. They meet once each term, and their remit is as follows:

- To provide a forum for debate about important matters.
- To receive feedback from students.
- To initiate enquiries or investigations on matters of concern to students.
- To represent the interests and requirements of the student body.
- To air grievances.

The membership is drawn from the student body, with members being elected by their peers at the beginning of term, the Student Union, the Graduate Student Association and relevant Departmental Officers.

The Undergraduate SSLC is chaired by the Director of Undergraduate Studies and both the MSc and PhD are chaired by the Senior Tutor (Postgraduate), with the Departmental Postgraduate Representative acting as Deputy-Chair.
15. Student surveys

Your feedback is important to your Department, the College and Imperial College Union.

Whilst there are a variety of ways to give your feedback on your Imperial experience, the following College-wide surveys give you regular opportunities to make your voice heard:

- PG SOLE lecturer/module Survey
- Student Experience Survey (SES)
- Postgraduate Taught Experience Survey (PTES)

The PG SOLE lecturer/module survey runs at the end of the autumn and spring terms. This survey is your chance to tell us about the modules you have attended and the lecturers who taught them.

For PG SOLE your lecturers will receive their individual numerical results and comments shortly after the survey closes. To make the most of your opportunity to give your feedback, please do not use offensive language or make personal, discriminatory or abusive remarks as these may cause offence and may be removed from the results. Whilst this survey is anonymous, please avoid self-identification by referring to personal or other identifying information in your free text comments.

The Student Experience Survey (SES) is another opportunity to leave your views on your experience. This survey will cover your induction, welfare, pastoral and support services experience.

The Postgraduate Taught Experience Survey (PTES) is the only national survey of Master’s level (MSc, MRes, MBA and MPH) students we take part in. This is the only way for us to compare how we are doing against the national average and to make changes that will improve our Master’s students’ experience in future. PTES covers topics such as motivations for taking the programme, depth of learning, organisation, dissertation and professional development. PTES last ran in spring term 2018.

All these surveys are anonymous and the more students that take part the more representative the results so please take a few minutes to give your views.

The Union’s “You Said, We Did” campaign shows you some of the changes made as a result of survey feedback:

- www.imperialcollegeunion.org/you-said-we-did

If you would like to know more about any of these surveys or see the results from previous surveys, please visit:

- www.imperial.ac.uk/students/academic-support/student-surveys/pg-student-surveys

For further information on surveys, please contact the Registry’s Surveys Team at:

- surveys.registysupport@imperial.ac.uk
16. And finally

Alumni services

When you graduate you will be part of a lifelong community of over 190,000 alumni, with access to a range of alumni benefits including:

- Discounts on further study at the College and at Imperial College Business School.
- Alumni email service.
- Networking events.
- Access to the Library and online resources.
- Access to the full range of careers support offered to current students for up to three years after you graduate.
- Access to our Alumni Visitor Centre at the South Kensington Campus, with free Wifi, complementary drinks, newspapers and magazines, and daytime left luggage facility.

Visit the Alumni website to find out more about your new community, including case studies of other alumni and a directory of local alumni groups in countries across the world.

[www.imperial.ac.uk/alumni](http://www.imperial.ac.uk/alumni)

Opportunities for further study

After you have completed your Master’s programme, you may choose to continue your studies on a PhD, CPD, or CDT programme at Imperial.

17. Appendix A: Monitoring Attendance

Since the introduction of Tier 4 of the Points Based System in March 2009, the College has held a license permitting us to sponsor the visas of students from outside the European Union to enable them to attend our courses.

Sponsorship of students, under our Tier 4 Visa License, brings with it an obligation for us to inform the Home Office whenever we withdraw sponsorship from a student. This may be as a result of a student withdrawing or being expelled from their course, interrupting their studies, or not being in attendance. This is reflected in the College’s regulations and procedures to ensure the welfare and academic progress for all students. See Academic Regulation Paragraph 9.4 of the General Regulations for Students:

http://www.imperial.ac.uk/about/governance/academic-governance/regulations/

The College does not wish to discriminate in its treatment of students from outside the European Union, and so all procedures for monitoring attendance and reporting student activity apply equally to all students.

The procedure for compliance adopted for the Master of Science Programme within the Department of Civil and Environmental Engineering is to base the monitoring of attendance around a number of ‘check-points’, which are:

- Start-of-Session Induction.
- Confirmation of attendance at the Health and Safety Induction, which is a requirement of the College for issue of ID cards.
- Submission of selected items of coursework.
- Attendance at Field Trips/Site Visits.
- Examinations and Progress Tests.
- Randomly selected lectures/laboratories/tutorials.
- Scheduled meetings with Personal Tutors and/or Project Supervisors.

In order to make this process efficient, the following shall apply.

- The Cluster Administrator (or other relevant staff) shall conduct the monitoring using a class list supplied by Imperial College Registry.
- There shall be one location (which will be notified to you by email) for the submission of randomly selected coursework related assessment items.
- Each student shall sign (digitally or paper) the class list at each check-point.
- The Cluster Administrator shall inform the relevant Senior Tutor and Course Director of any student who fails to interact with the College on three consecutive occasions.
- The student will be invited for interview, and a warning may be issued.
- If non-attendance continues, the Senior Tutor shall inform the Head of Department and the College Registry.
- The Imperial College Registry report directly to relevant authorities, including HEFCE, the UK-VI and sponsors.

The Department expects students to demonstrate their commitment to their degree programme by attending lectures, complying with specific requests within specified deadlines, and submitting coursework on time. If students cease to engage properly with the course, e.g. by being absent without permission or adequate cause, this may be reported to
the relevant authorities, and may result in being asked to leave the College. In the case of those attending with Student Visas, this could jeopardise the individual’s ability to stay in the UK.

**Internships**

Postgraduate students can only undertake work placements if they are an approved part of their course of study (an example of which might be as part of the project element). Students who may wish to interrupt their studies to take an internship (in the UK or overseas) will have the sponsorship of their visa withdrawn and will need to apply for a new visa in order to return to their course at a later date.
Department of Civil and Environmental Engineering

Postgraduate Taught (MSc): Recording of External Study Leave Form
(please see notes overleaf)

**This form must be completed by the Student and Supervisor and returned to the Cluster Administrator for processing**

<table>
<thead>
<tr>

The following to be completed by the principal supervisor

I approve this period of study leave and confirm that I will maintain regular contact with the student named above

Signature of supervisor(s):

Date:
NOTES

Recording Study Leave.

This form should be used to cover any and all study time which is spent outside of the UK. for the following situations:

a. Field work and data collection.
b. Study Leave which is not subject to the Placement Learning Policy, such as extended field work. The College’s Off-Site Working procedures should be followed: [http://www.imperial.ac.uk/safety](http://www.imperial.ac.uk/safety)
c. For Tier 4 students the College is required by UKVI to report any time away from the College as a ‘change of study location’ within 10 days of this change taking place. This will not impact on a student’s visa status in the UK.

The form to be:

- completed by the student,
- authorised by the supervisor
- submitted to the Cluster Administrator (who will file a digital copy with the General Office, Skempton Building (cvpgo@ic.ac.uk))

The General Office will be responsible for any further notifications required.

For students with Tier 4 visas

The Visa Compliance Team may be contacted by email on visacompliance@imperial.ac.uk for advice.

Queries regarding this form should be addressed to Fionnuala in the General Office or by email to flo@ic.ac.uk.
18. Appendix B: Disabilities Statement

Information for students with disabilities, specific learning difficulties or long-term health issues

At Imperial College we recognise that studying at university can be a challenge, especially if you have a disability. We are keen that you have every opportunity to fulfil your potential and graduate with the degree you deserve. It is therefore important that you let us know about any disability, specific learning difficulty or health problem as soon as possible so that we can arrange expert advice and support to enable you to do this.

Some people never think of themselves as having a disability, but students who have experienced any of the issues listed below have found that a little extra help and support has made all the difference to their study experience.

- Specific learning difficulties (such as dyslexia, dyspraxia, AD[H]D).
- Autistic spectrum disorder (such as Asperger’s).
- Deafness or hearing difficulties.
- Long term mental health difficulties (such as chronic anxiety, bipolar disorder, depression).
- Medical conditions (such as epilepsy, arthritis, diabetes, Crohn’s disease).
- Physical disabilities or mobility impairments.
- Visual difficulties.

Where to find help:

Departmental Disability Liaison Officer

Mrs Louise Green
l.green@imperial.ac.uk
Room 401
020 7594 6045

Mrs Green is your first point of contact within your Department and is there to help you with arranging any support within the Department that you need. She is also the person who will apply for special examination arrangements on your behalf. You need to contact her without delay if you think that you may need extra time or other adjustments for your examinations.

Disability Advisory Service

The Disability Advisory Service works with individual students no matter what their disability or level of study to ensure that they have the support they need. Our advisors are committed to providing the best possible support for all students at Imperial College. They understand that each person’s disability can affect them in different ways and therefore the support offered is flexible and tailored to you. We can also help if you think that you may have an unrecognised study problem such as dyslexia. The Service is confidential and information about your support needs is only passed on to others within the College with your agreement and then only in order that you are fully supported. Our advisors never pass on information outside the College or to parents unless you ask them too.
Some of the sorts of things the Disability Advisors can help with are:

- Checking that your evidence of disability is appropriate and up-to-date.
- Arranging a diagnostic assessment for specific learning difficulties.
- Making recommendations for additional exam arrangements, for example extra time or rest breaks.
- Drawing up a “Suggested Reasonable Adjustment” document for you to share with your Department which outlines all of your support needs.
- Arranging and funding the support you need. This can include:
  - Note taking, study skills or mentoring support.
  - Purchasing disability related equipment (NOT computers).
  - Funding taxis for those who need help with transport.
- Help with arranging extra Library support and access to the Assistive Technology Suite
- Supporting applications, where appropriate, for continuing accommodation for your second or later years.

A disability is any long-term condition that has a substantial impact on your ability to study effectively, such as:

- A specific learning difficulty, e.g. dyslexia, dysgraphia.
- An enduring mental health condition, e.g. depression, OCD, generalised anxiety disorder.
- A visual, hearing or other sensory impairment.
- A long-term medical condition, e.g. IBS, ME, diabetes.
- A social/communication difficulty, e.g. autistic spectrum/Asperger’s syndrome.
- A mobility or dexterity issue.
19. Appendix C: Revision and Exam Stress

Stress

During revision and exam periods, anxiety and stress are very common problems for students – even for those who appear confident and calm. Don’t despair; you are not alone.

A small amount of anxiety can actually be beneficial, it can make you alert and focused, but too much anxiety means you will have trouble thinking clearly and this means you aren’t likely to do your best work.

What exactly is stress?

Stress is the body’s normal response to a challenge, threat or excitement. The consequence of stress depends largely on how you interpret the physical symptoms; it can help motivate you or it can paralyse you.

Take the following scenario:

- Joe: a student just before a critical exam
- Jane: an athlete just before a big competition
- Both Joe and Jane are aware of the same physical symptoms:
  - sweaty palms
  - racing heart
  - knot or butterflies in the pit of the stomach

Joe, the student, feels distressed by his symptoms and views them negatively, as if the symptoms are a sign of impending failure. Joe may have trouble sleeping and spend a lot of time worrying about his physical condition and the upcoming exam.

Jane, the athlete, interprets her symptoms as a sign that she can motivate herself to perform well. She views the symptoms as evidence that she is “psyching herself up” for the big competition.

The bottom line?

Stress can be a barrier to optimal performance or a motivating agent; it all depends on how you interpret, label and manage what you are experiencing.

The trick is to figure out what level of stress is motivating for you and what amount is paralysing and then work to keep it in the motivating zone.

Anxiety

Anxiety is very common and many people find ways of overcoming it or coping with it without seeking professional help. However, for some people anxiety can be harmful, it can affect your physical health, or your fears can take over your life and stop you doing the things you want to do. The good news is that there are things you can do to help.
Managing anxiety

1) Identify trigger factors
The first step in managing anxiety is to identify the specific situations that are making you stressed or anxious and when you are having trouble coping. One way to do this is to keep a diary of symptoms and what is happening when anxiety occurs. It is also helpful to identify any worrying thoughts as this can lead to finding ways to solve the specific problem that is of concern.

2) Thought management
Thought management exercises are useful when a person is troubled by ongoing or recurring distressing thoughts. There are a range of thought management techniques. For example, you can use distraction with pleasant thoughts. This can help take attention away from unpleasant thoughts. Alternatively, one can learn ‘mindfulness techniques’ to direct attention away from negative thinking and treat thoughts as just thoughts and not facts. The choice of thought management technique will depend on the type of anxiety problem. A psychologist can help you decide on thought management strategies that are likely to be most helpful.

3) Talk about it
Try a friend or relative who you trust and respect, and who is a good listener.

4) Learning to relax
People who feel anxious most of the time report that they have trouble relaxing. Knowing how to release muscle tension is an important anxiety treatment. Learning a relaxation technique and practising it regularly can help a person to maintain a manageable level of anxiety. You can learn these through groups, with professionals, but there are several books and self-help materials you can use to teach yourself. It’s a good idea to practice relaxation regularly, not just at times of crisis.

Managing revision stress

Take a look at the three categories outlined below and see which one best describes the type of student you are. Some students get stuck in one pattern – others may pass through each phase.

When you have identified what type of student you are or what phase you are currently in, click on the appropriate link below for tips on how to help yourself.

Which type of student are you?

1. The Self-Indulgent student
   - denial of responsibility / or overconfident
   - not lazy, but has low frustration tolerance
   - escapist tendencies
   - requires stimulus to raise anxiety (e.g. approaching deadline)
2. The Tense & Fearful student

- denial of potency – deskilling self unnecessarily
- self-critical, low self-esteem
- overwhelmed by the importance of the exam, pressure to succeed

3. The Perfectionist student

- denial of vulnerability, wanting total control
- critical of the "system", passive-aggressive
- sets impossible goals, so never feels “good enough” or “safe enough”
- obsessive, workaholic tendencies; or procrastination

**Study and exam strategies**

**Organise**

- Sort out your topics for revision. Base selection of topics on syllabus and examination requirements, on predictions derived from past papers and on guidelines suggested by tutors.
- Devise a routine of study periods that is realistic and productive, and includes rest intervals!
- Pay attention to diet, sleep and recreation – all are important factors in maintaining balance and keeping stress levels under control.
- Breakdown targets into manageable units. Ticking off completed units creates a sense of forward movement. A checklist for the day’s targets (making sure the targets are realistic and achievable) can also boost morale.
- Use your time wisely – deal with less demanding tasks in periods of the day when you are less alert or focused. If you find yourself struggling unproductively with a problem, take a break or switch to some other work.

**Maximise your learning**

- The more you actively interact with the subject matter, making it your own, and linking it to previous knowledge, the more meaningful and memorable it becomes.
- Follow the PQRST model:
  - **P**review – skim the material to get an overall preview
  - **Q**uestions – formulate questions that highlight what you aim to derive from your reading
  - **R**ead Actively – make appropriate notes of key ideas
  - **S**ummarise – identify the main points using lists, key words, flow diagrams, etc. and connect them with knowledge from other sources
  - **T**est – test yourself by reciting and reviewing the summaries immediately after learning the material and again at later intervals
Tips

- Use flow diagrams, keywords or patterns linking ideas to make master summaries for revision purposes.
- Use cue cards! Index-sized “flash” cards are easy to carry around and are useful for learning information you find particularly hard to remember. You can put facts, figures, formulae on the cards and use colours, keywords, mnemonics and other memory aids to help you learn.
- Space your studying and give yourself time for the information to sink in. Study related topics together and take regular, short breaks at suitable “achievement points”.
- Compare notes with other students and get feedback and/or clarification from tutors.

General exam strategies

Conquering exams: strategies and skills

- **Practical preparation**: Check the time and venue of the exam and figure out how to get there in good time, and have the necessary equipment ready (e.g. pens, ID card, clear bottle of water etc.)
- **Emotional preparation**: Mentally rehearse how to tackle the exam as a whole and review your strategies for dealing with anxiety. Consider what might also help, for example, staying away from crowds gathering outside exam halls.
- **Memory considerations**: Systematically review your revision notes the night before or the morning of the exam, but don’t attempt to learn complex new material at this late stage. Capitalise on short-term memory by glancing at your “difficult” cue cards just before entering the exam hall, then try reproducing them immediately when you are allowed to start.

Exam skills

Read the exam paper carefully and underline key words and instructions.

Don’t panic – if you feel unable to answer any of the questions at this stage it is likely due to a surge in anxiety.

- Note how many questions you are required to answer and if any are compulsory.
- Tick the questions you intend to answer. Make a rough timetable, allocating equal time to equally weighted questions. Allow for about 15 minutes of “planning” and 10 minutes of “finishing off” time overall for a typical 3 hour exam.
- Avoid getting demoralised at the start. Answer the easiest question first and save the most difficult one for last. Attempt all the questions required – usually the first 50% of marks for any question are easier to obtain than the next 50%.
- Watch the wording of the questions. Answering a question that wasn’t asked means no marks, no matter how thoughtful your answer was!
• Jot down key ideas that emerge about any of the questions and use them for “planning” an answer. This might show the examiner what you had in mind in case you run out of time.

• Save the last 5-10 minutes for “finishing touches” e.g. crossing out unwanted script, ensuring that questions are clearly numbered, and that all answer books have your identification number.

Sitting the exam

What if I get a mental block during an exam?

• Give yourself a couple of minutes to try to remember or puzzle out the answer. If you are still blocked, move on to the next question. If ideas for dealing with the question pop up while working on another one, jot them down before you forget them.

• With mathematical questions it pays to stick with the problem a bit longer, say 10 minutes. Try thinking back to first principles or representing the problem diagrammatically or more concretely, or think laterally about related issues.

• Adjust your timetable and still attempt all the required questions.

What if I panic during an exam?

If you start panicking in the exam, and you find that the harder you try to work the worse you feel, practise “Stop the Wasp”:

• **STOP** – the self-defeating thoughts that are buzzing around like wasps. Tell yourself instead that you are going to survive this experience, come what may. Go through the following “W-A-SP” squashing procedure, which you’ll need to practise during milder forms of anxiety in the revision period (so you can learn to recognise the early stages of panic, which are easier to neutralise).

• Familiarity with the procedure, through practice and mental rehearsal is essential emotional preparation.

• **WAIT** – switch off and unwind for a few moments. Focus on breathing and then relax with eyes closed. This will help you return to the task afterwards with a calmer, clearer mind and a more constructive perspective.

• **ABSORB** – taking in the relaxation, flood your mind with constructive self-talk (ideally from a repertoire of previously prepared and practised phrases), then slowly open your eyes and calmly bring yourself to face the exam situation.

• **SLOWLY PROCEED** – calmly get going again with the paper, as best you can, one step at a time.

Keep in mind:

• When focusing on your breathing, take a long, slow, deep breath, and allow the air to flow out slowly and smoothly. Sit back comfortably, dangling your arms by your side, and imagine any tension flowing out through your hands and feet. Try any relaxation strategy that works for you.

• If your breathing pattern has been rapid and shallow, you may be at risk of hyperventilating. Instead, pause after long exhalations, and breathe your’re stomach, rather than upper chest, movements. If you continue to hyperventilate, breathe into
cupped hands (or even a paper or plastic bag – take one along if you think you’ll need it).

- It may help to reframe your attitude towards the examiner. Instead of some sadistic, persecuting figure, imagine him or her as a friend, or someone who just wants some help with the question.

Repeat “Stop the Wasp” if necessary – you may have rushed back too soon the first time. Stay longer “waiting” and “absorbing”. If the panic continues or escalates, tell the invigilator without delay.

**After the exam**

Don’t indulge in post-mortems and comparisons with others. Review what went well in your overall approach, including how you handled anxiety, and aim to improve upon it in your next exam.
Appendix D: Cheating Offences: Policy and Procedures

The Policy and Procedures contained in this document apply to all students and former students at Imperial College registered for Imperial College or University of London awards. A complete copy of the College regulations governing Cheating Offences: Policy and Procedures, under which Plagiarism is categorised, is available to download from the following link:

In any proceedings under these Policy and Procedures, the student shall be presumed to be innocent until the contrary is established beyond reasonable doubt.

Where the offence is an instance of suspected plagiarism, it shall be dealt with in accordance with the following procedures, commensurate with the severity of the suspected offence.

If you are not sure, please ask. Useful reference points are academic and library staff.

**Plagiarism** is defined as the presentation of another person’s words, ideas, judgement or data as though they were your own. For example; not referencing the source of your ideas or arguments when they have derived from your reading; taking verbatim the words of someone else’s work and putting it into your project without quotation marks and referencing; taking whole sections out of books, the internet, articles, lecture notes, other reports or other students’ work, and including them in your report uncited. It may also occur in formal written examinations, the above document addresses this possibility. An example might be where candidates have been able to learn text by heart (by rote) and simply reproduce this without acknowledgement of source. Where the examination is based on technical knowledge, this may be acceptable and not regarded as plagiarism. In other subjects where candidates are asked to write essay-type questions, the examiners may regard text reproduced without reference or critical analysis as plagiarism. This will be clarified, where appropriate, in the examination rubric on the front page of the examination paper.

You should be aware that you have a collective responsibility for the integrity of group work submitted for assessment. This means that if part of the work is plagiarised, all group members will be held accountable unless proof can be provided by each individual member of their contribution. You should, therefore, retain an audit trail of your contribution for this purpose.

When submitting (both individual and group) assessed coursework you will be required to complete and attach a Coursework Cover Sheet (examples on the following page) confirming that you have read and understood the definition of plagiarism. Submitting this form will certify that the work presented is entirely your own, except where indicated.

Plagiarism is a serious offence. The Examination Board reserves the right to take further action as it deems appropriate to protect the name of the Department and the College, and this may involve expulsion of a student from the programme or delay or withdrawal of a degree award.

INTRODUCTION

The Health and Safety of all students whilst studying at Imperial College is a primary concern to the Staff and College. There are several major pieces of legislation that dictate the implementation of Health and Safety Policy and Practise. We must ensure that students are not put at risk during their study at Imperial College. However, there is also a responsibility upon yourself to follow, to the best of your abilities, all instructions and guidance provided. This booklet has been written to provide an outline of Health and Safety arrangements within the Department and to provide you with guidance to your own responsibilities.

GENERAL INFORMATION

Health and Safety within the Department is organised and managed by the Departmental Safety Officer, Dr G. Fowler (room 413, ext. 45973). He is always available to provide advice and guidance on all aspects of Health and Safety. All major Health and Safety decisions are made by the Skempton Building Safety Committee, which meets every term. The committee comprises representatives from all the Sections in the Department, Users of the Building, Student representatives (UG & PG), plus staff with specialist advisory roles for particular activities that may present a risk.

The Orange Health and Safety and Green First Aid/Lifesaver notices provide Health and Safety guidance and list the members of staff with specific safety related duties and responsibilities. Copies of these notices are included inside this book and further copies are spread throughout the Department. These signs are updated regularly. You must yourself familiar with their content.

The College has a significant amount of safety-related information available via its web site: http://www.imperial.ac.uk/safety.

YOUR RESPONSIBILITIES

Each student is responsible for looking after their own health and safety and that of others affected by their College-related work and leisure activities. To this end, each student must:

a. Comply with all local and College policies, procedures and codes of practice and with the arrangements which the College has in place to control health and safety risks.

b. Ensure that their activities do not present unnecessary or uncontrolled risks to themselves or to others.

c. Attend appropriate induction and training.
d. Report any accidents, unsafe circumstances or work-related ill health of which they become aware to the appropriate person.

e. Not interfere with any equipment provided for Health and Safety reasons.

f. Where a student is not confident that he or she is competent to carry out a work or leisure activity safely, inform his or her supervisor or the person in charge of the activity rather than compromise his or her own safety or the safety of others.

DEPARTMENT SAFETY SHAREPOINT SITE

The Department operates an electronic safety registration and risk assessment system. It is based around an online resource for H+S using the Microsoft SharePoint platform. This system provides a single resource for safety management, including: risk assessment creation and final approval and laboratory safety information. Appendix 1 in this booklet provides a summary of the how you can access the system and complete a risk assessment. As taught students, you will only need to use this system for the research project element of your course where your work may include laboratory or fieldwork activities. Risk assessments will not be needed for desk or computer-based projects. Appropriate training in using this system will be provided when required.

DEPARTMENT SECURITY

Security and safety are closely linked. Please help us keep the building secure and safe by following the following simple rules:

**ALWAYS** wear your College Security/ID card whilst at College. Belt clips or neck lanyards are available from the department General Office.

**DO NOT** allow strangers to enter the building out of hours (deliberately or via tailgating)

**NEVER** lend your ID card to anybody, if they cause damage or present a risk to security or safety, **YOU** will be liable.

DEPARTMENTAL WORKING HOURS

The nature of the College is such that it appears to operate 24 hours per day – research never stops. Nevertheless, there are times of the day which the College considers are “outside normal hours” or access is limited and so special safety procedures including specific risk assessments and or lone working approval may be needed for your work to continue. In addition, there are times of the day when the College is “closed”. The Department open and closed hours are as follows:

<table>
<thead>
<tr>
<th>Normal opening hours:</th>
<th>8am – 6pm Monday to Friday</th>
</tr>
</thead>
<tbody>
<tr>
<td>Swipe card access only:</td>
<td>7am – 8am &amp; 7pm – 12pm, Weekdays</td>
</tr>
<tr>
<td></td>
<td>7am- 12pm Weekends and Public Holidays</td>
</tr>
<tr>
<td>College “Closed” (swipe inactive):</td>
<td>12pm to 7am every day and during selected whole days during College Closure at Christmas.</td>
</tr>
</tbody>
</table>

Please make sure that you leave the Department before midnight. College Security patrol the buildings out of hours and any persons found on the premises will be removed from the building and have their access rights curtailed.
SAFE BEHAVIOUR IN THE DEPARTMENT

This is a large and busy building where many varied and potentially dangerous processes occur. You should always be careful when in the building, to ensure that you do not put your self or others in way of harm. For example, be aware of people around you when walking down corridors, so that you do not obstruct them or inadvertently release a door into their path. All doors on the corridors are fire doors and have automatic closer devices fitted which cause the door to swing back, almost instantaneously, to the closed position. Please note that some of these doors (mainly on Level 5) have a delayed close and should not be forced to close – this will damage the closer device. Fire doors must never be propped open with a wedge or other heavy object.

Also, please note:
- Do not run in the corridors.
- The wearing and use of roller blades, inline skates and the use of scooters in the building is forbidden. They are a hazard to other people and damage the floors.
- You must not enter any of the laboratories or workshops without prior permission.
- **Bicycles are not allowed** in the building – this is a College-wide policy. Bicycles must be stored in the racks provided on Campus.

WASTE DISPOSAL

There are very strict laws governing waste disposal. The College is proactive with regard to waste management and recycling, there are numerous recycling points around the building. Certain wastes generated in the department are separated for recycling/safety reasons. The following is a brief guide to the recycling and waste disposal mechanisms operating throughout the campus and applied within the department.

The College is striving to recycle as much of the waste it generates. One way to achieve this is by segregating waste at source. To achieve this the College has a number of different waste bins in use, which are colour-coded, each one designated for different wastes:

- **Waste domestic Glass (not broken glass):** Use the red-topped bins
- **Paper and Card (no paper cups or food wrappers):** Use the blue-topped bins
- **Cans and plastic bottles:** Use the green-topped bins
- **Non-recyclable waste:** Use the black-topped bins

Special arrangements exist for non-domestic, electronic and laboratory wastes:

- **Batteries**  
  A dedicated bin for batteries is located on level 2 (BOSS area) in the area near the photocopiers.

- **Chemical wastes**  
  Any waste arising from laboratory activity which is contaminated or classified as hazardous (laboratory staff will advise you if you are unsure) must be disposed of in a controlled manner. Each Laboratory has special containers for segregating these wastes, including solvents, flammable waste, oils, corrosive materials, powders, etc. Please follow the guidance in each laboratory appropriate for the waste requiring disposal.
Clinical waste: Of main concern are syringe needles and any bodily fluids. If you find anything which may fall into this category around the department, please contact the Department Safety Officer (DSO) immediately.

Electrical equipment: Waste electrical equipment must not be disposed of via the non-recyclable waste route. Please contact the DSO for details of the procedures which exist for disposing of these materials.

Laboratory waste: Every laboratory has rules regarding the disposal of laboratory waste. You will be advised by laboratory staff what is expected in each laboratory.

Laboratory Glass: The College operates special disposal systems for laboratory glassware which is contaminated or made from Pyrex – it MUST NOT be put into the red recycling bins in communal areas.

Toner cartridges: There is a bin on L2 (BOSS area) and L4 outside room 415, dedicated to printer and toner cartridges.

If you have any doubts regarding the best way to dispose of a laboratory waste, ask the Laboratory staff, your Supervisor or the Department Safety Officer. Your risk assessment should specify all waste disposal procedures required for your work.
FIRE EQUIPMENT AND ESCAPE ROUTES

The Department has several means of escape in an emergency. The plan below shows the building in relation to the rest of Imperial College.

Emergency exit locations and Assembly point for Skempton Building

There are four primary exit routes from the upper levels of the Skempton Building:

- The East Stairs adjacent Mechanical Engineering/Unwin Road
- The West Stairs which are part of Electrical Engineering
- The Main (Central) Stairs beside the lifts, through reception
- Through the BOSS area on Level 2 into the City and Guilds Building

The emergency evacuation assembly point is the stepped area at the base of the Queen’s Tower.

All the corridors in the building must be kept clear. Do not put chairs or tables into corridors, as they reduce the width and cause an obstruction. Similarly, because all the doors in the Department corridors are fire doors, they must NEVER be propped open with wedges, fire extinguishers or by any other means.

You MUST know which way is the quickest emergency escape route from your location in the building. All the emergency escape routes are indicated with an “arrow and running directional figure” green sign. The evacuation alarm is a Claxon sounder with voice
instructions. If this activates you must stop what you are doing and leave the building IMMEDIATELY by the nearest emergency escape route in an orderly manner, making sure that you close any doors behind you.

There are evacuation notices in every room in the building (please following for an example) indicating with a green arrow the preferred exit route from that part of the building. Please follow these arrows as they will ensure that you can evacuate from the building with the minimum of delay. Please try to avoid using the main staircase during an emergency evacuation. The congestion on the Main Staircase can be significant and your evacuation will be much delayed.
THERE WILL BE A FIRE DRILL DURING THE FIRST TERM, TO FAMILIARISE YOU WITH EMERGENCY PROCEDURES.

**Direction of the nearest escape route**

The assembly point is adjacent the base of the Queens Tower

For further details see the Department Safety notices

**IF THE FIRE EVACUATION ALERT SOUNDS, DO NOT:**

- Wait or return to collect any belongings
- Leave the assembly point until instructed to do so
- Return to the building until the all-clear is given

For all Emergencies dial 4444

This notice must NOT be removed from this room

THERE WILL BE A FIRE DRILL DURING THE FIRST TERM, TO FAMILIARISE YOU WITH EMERGENCY PROCEDURES.
FIRE PREVENTION & SAFETY

The consequences of a fire in any building can be several fold. Apart from the unacceptable loss of life which may result, there are the lesser consequences of damage to the building, the cessation of activities in the damaged area (or the whole building) and the loss of research and data in an Academic building. None of these outcomes are acceptable.

There is a responsibility upon all users of the building to ensure that fire prevention is a core part of all risk assessments and our day-to-day activities. The College has suffered several fires in recent years. The most serious occurred in the Department of Chemical Engineering and resulted in three laboratories being destroyed. The consequence of the lost research, equipment and data was very costly to the students and staff concerned, irrespective of the fiscal implication for the College and Department.

Current UK Fire Brigade policy is to not place fire fighters at risk, if there are no members of the public (College personnel) in the burning building. Thus, they could allow the building to be destroyed.

There have been several fire incidents in the Skempton Building, mostly caused by faulty electrical equipment. Most recently there have been several incidents involving the communal microwave ovens. When using the microwave ovens, the instructions on the ovens must be followed. **Failure to use the ovens responsibly and safely may result in them being removed.**

<table>
<thead>
<tr>
<th>MICROWAVE OVEN SAFE USAGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Follow the instructions on the front of the microwave oven</td>
</tr>
<tr>
<td>• Never microwave loose food – always place it in a container</td>
</tr>
<tr>
<td>• Only use “microwave oven safe” containers</td>
</tr>
<tr>
<td>• Do not use metallic containers or utensils in the microwave</td>
</tr>
<tr>
<td>• Loosen/open the lid on the container</td>
</tr>
<tr>
<td>• Do not leave food cooking unattended</td>
</tr>
<tr>
<td>• If food spills in the microwave, please clean it up.</td>
</tr>
<tr>
<td>• Report any problems with the microwave to the Technical Services Manager</td>
</tr>
<tr>
<td>(<a href="mailto:b.whiting@ic.ac.uk">b.whiting@ic.ac.uk</a>)</td>
</tr>
</tbody>
</table>

The College has a policy that ALL accidents or dangerous occurrences, however small, **MUST** be reported. This is because there is a very strict law with regard to reporting accidents to the authorities. There is an online system “SALUS” available for reporting all accidents or dangerous occurrences. A dangerous occurrence is an incident that **does not** result in personal injury.

SALUS is accessible from the Safety department web page via a quick link:

http://www.imperial.ac.uk/safety
Typical accidents in the Department tend to occur due to “slips, trips, falls” and poor lifting practise. Many of the corridors in the Department are linoleum or terrazzo. When wet, the floors are slippery. If you see a wet floor, or cause a floor to become wet, for example by spilling coffee or tea, please do not walk away, clear it up with paper towels (these are available from the General Office).

FIRST AID & LIFESavers

The College has a very well organised First Aid system. There are several qualified First Aiders working within the building. The offices of these staff are identified by the Universal first aid sign (a Green & White cross). If you feel unwell or need First Aid assistance please contact any of the staff identified on the list in the front of this book for assistance. In addition, most of the College Security staff are trained in First Aid and can be contacted by calling the College emergency number 4444 or 020 7589 1000. There are supplies of sticking-plasters and bandages available to treat minor injuries (cuts, scrapes and bumps). Any injuries which cannot be readily treated by a First-Aider must be looked at by the Health Centre, who may decide that hospital treatment is necessary.

ELECTRICAL EQUIPMENT

The Department has a very strict policy regarding mains-powered portable and desk-based electrical equipment brought onto the premises. This is detailed below. The key aspect of this policy requires that any electrical equipment in the building must be either new or safety tested prior to use. The periodic testing of electrical equipment in the Department is undertaken by external contractors. Thus, unless your electrical equipment meets any of the conditions below, you are NOT PERMITTED to plug it into the department electrical 240V sockets.

All equipment which has been tested and passed the electrical safety test will have attached a green sticker indicating that it may be used in the department (see image following). Any equipment not displaying this sticker or meeting the exceptions criteria described below the image, will be confiscated.
New equipment brought into the Department

New equipment brought into the Department may be used for the first year without the need for a Portable Appliance Test (PAT). The user is asked to perform a simple visual check on all equipment prior to use. Records of the equipment purchase, usually through the College finance system or a receipt from the supplier, must be kept to be able to prove the date of purchase. It must also be marked with a European CE mark or an otherwise equivalent international directive.

Personal electrical equipment brought into the Department

Personal electrical equipment brought into the Department will be PAT tested as Departmental equipment. To ensure that personal electrical equipment is tested within an acceptable timeframe (limit of one year of safe usage), only new personal equipment may be brought into the Department. Proof of date of purchase will be required. Under no circumstances may old equipment be brought into the Department. If old equipment is found then it will be confiscated and may be destroyed. The exception to the above is personal mains chargers for devices such as laptops, tablets and phones, etc. for which there is no age restriction.

Unauthorised electrical equipment

The list below gives some examples of unauthorised electrical equipment which must not be brought into the Department:

- Electric fires and heaters of any form.
- Any form of equipment used for cooking or warming food (kettles, toasters etc.).
- International equipment which is not compatible with the UK mains voltage (220-240V).
- International equipment which is not marked with either the European CE mark or an equivalent international standard.
Electrical equipment belonging to visitors

Electrical equipment belonging to visitors and brought into the Department will be subjected to the normal Departmental rules.

Electrical equipment belonging to third parties

Electrical equipment belonging to third parties, such as contractors working within the Department, are the responsibility of the third party who will be required to demonstrate that their policies and procedure are at least in accordance with and of a standard compatible to those of the Department.

Design, construction, checking and testing of electrical equipment

Those involved in the design and construction of electrical equipment will be required to ensure that such equipment is suitably tested to ensure that it performs within the general conditions of the Department’s “Electrical Equipment – Policy and Code of Practice”.

Repair, installation or modification of electrical equipment

Unless otherwise directed, staff and students in the Department are not allowed to undertake any repair, installation or modification to electrical equipment.

Disposal of electrical and electronic equipment

Consult the Facilities Management web pages to arrange for the collection and disposal of unwanted College Equipment (there may be a charge for this service).

http://www.imperial.ac.uk/estates-facilities/buildings/services/waste-disposal/waste-disposal-forms/weee-forms/

LABORATORY COURSES

There may be several occasions when you will undertake laboratory work as part of your course. The Department is very unusual within the College in that it operates all major classes of laboratories with many diverse activities, which include the traditional mechanical and engineering testing through to specialised chemical and biological work. Each laboratory has their own specific safety procedures which will be explained in detail before any work commences, you MUST abide by the following general rules for any laboratory behaviour/work.
Work in any laboratory must only be conducted during normal College hours (9am-6pm), with at least one other person in sight at all times. Lone laboratory working is NEVER PERMITTED. Additionally, the other person in the laboratory must know the College emergency procedures and be familiar with the working environment so that if they need to isolate a service or make safe an experiment in an emergency, they know what to do.

RISK ASSESSMENTS

Risk assessment is the cornerstone of Health and Safety management. No activity should be started before a risk assessment has been completed. To be able to perform a risk assessment you need to know what you are going to do and have an understanding of the steps and processes required in the task being assessed. If all the information is at hand, the assessment should be a straightforward task. If the risks are considered to be too high, this does not mean that the activity cannot be completed but it may mean that a different approach or better control measures are required to reduce the potential risks.

For most laboratory classes, the assessment will have been undertaken by the course or laboratory organiser. They will explain the assessment to you and indicate the main risks from the work to be conducted and advise you how to avoid these risks. However, some laboratory or fieldwork classes will require you to complete your own assessment (particularly for project work). The Department has standard online forms for this purpose, accessed via the SharePoint site mentioned earlier. Guidance on the completion of these forms will be provided in special introductory sessions prior to you undertaking the projects requiring assessments.

When completing risk assessments, if you need further information or require advice, you must ask the staff supporting your work (Academic or Technical). If they cannot provide the necessary answer or information, please do not hesitate to ask the DSO.
FIELD COURSES

During the time of your studies within the Department of Civil and Environmental Engineering, there are several major courses of varying duration that require you leave the Department and College premises. Whilst away from these premises, your Health and Safety is still our responsibility. We take this responsibility very seriously. The College is covered for most events by its insurance, but there is an important onus (and a legal responsibility) upon you to abide by College Health and Safety rules. Every field course has its own specific set of instructions which detail the risks and methods for minimising these. Copies of these instructions will be given to you prior to your undertaking of the course. The following information is meant as a general benchmark for you to use and apply at all times when away for course purposes.

When we organise any field course, the course co-ordinator carefully considers all the potential risks that may occur and are attributable to the particular situation. For example a visit to a quarry has particular dangers which are different to a visit to a bridge or road, but there are several common risks which can be controlled and minimised if not entirely eliminated by applying several basic rules.

1. Whilst on any field course, the most important rule is that you MUST follow the instructions of the course leader. Pay particular attention to guidance on safe practices whilst on that trip.
2. Do not try to take too much luggage with you, heavy bags can be difficult to carry and cause back strain, as well as being a potential danger if they fall from luggage racks in buses.
3. Ensure that you are suitably dressed for the trip or course i.e.: a hard hat, warm and waterproof clothing and stout shoes would be a minimum requirement for a winter visit to a site – forget fashion!
4. Take particular care when crossing roads checking in both directions for traffic before crossing. When walking alongside roads not designed for pedestrians try to stay at least 1m from the traffic at all times.
5. Make sure that you inform the course leader of any medication which you use or any ailment which you suffer from that may be a problem during the course. For example if you are a diabetic or have food allergies, it is vital that the course leader of a residential trip is aware of this in advance for dietary purposes or in case you require medical assistance on the course. Ensure that you are carrying sufficient medication for the duration of your course. A less obvious condition, but equally dangerous would be if you suffer from vertigo and visits to a bridge or tall building may be a problem or conversely, claustrophobia would be an issue for a visit to sewers.
6. Be aware of problems like dehydration and sunburn which may occur on summer field trips.
7. Any accident or dangerous occurrence, however minor, must be reported immediately to the course leader.
8. The evenings of residential courses may seem like a ideal opportunity to relax and have fun, but alcohol abuse can be dangerous and antisocial behaviour resulting from this will **NOT BE** tolerated.
9. You are representing Imperial College whilst on the course. Any public nuisance or criminal prosecution resulting from disreputable behaviour whilst on the course will be your liability and not the College’s. For example, some sites are classified as SSI’s (Special Scientific Interest), damaging them by even walking across them can result in prosecution.
10. Visits to sewers, building sites or other outdoor environments may expose you to pathogens such as Tetanus or Leptospirosis (Weil’s Disease). It is recommended that your tetanus jab is kept up to date. It is usually valid for 10 years.

The course leader or coordinator must provide you with course details and risk assessments before commencing the field work activity. If you do not receive this information, ask the coordinator for it. **MEng Students must take the supplied PPE on all the field courses.** Failure to do this will result in you being refused participation in the course which may mean you fail that element and hence the year.

**Visits Abroad**

Trips outside the UK are a feature of some of the courses. However, depending on the reason for your trip abroad, the College’s insurance may not provide full cover in all eventualities (i.e. terrorism and war zones). There may be particular risks which must be considered alongside the normal risks discussed above.

The most obvious hazards are from disease, both insect and water-borne, which will generally be regional specific i.e. tropical climates – Malaria, so advice on the require vaccinations will be needed. The availability of clean drinking water cannot be overlooked.

There may also be hazards due to wildlife, for example, predators such as large cats, venomous creatures (snakes, spiders, fish etc.), sharks, polar bears and so forth.

Despite the growth of global communications, some parts of the world do not have very comprehensive satellite or mobile phone coverage, so communications with other part of the country or globe may be limited. In addition, battery life on mobile telephones must be carefully managed as you cannot guarantee to be able to find a suitable electrical supply to boost your telephone’s charge.

A further factor to consider is the political stability of the country you will be visiting. The risk of kidnap is a real threat in some countries. It is advisable to register with your national Embassy when you arrive in a foreign country, so that they know you are there. There are some countries around the world where organised society has broken down or is badly eroded due to Civil war or natural disasters. There must be very compelling reasons to travel to countries with these particular problems and comprehensive risk assessments will be required. In addition, approval for trip to countries which fall into this category will need to be given by the Head of Department. Your supervisor or course leader should make all the necessary arrangements to cover your trip. This includes activating the College insurance, which is a comprehensive policy. Nevertheless, it is very important to recognise that **no travel insurance** is truly and fully comprehensive. There are limits to what an insurance company can do to recover you from danger or protect you from harm. [International Rescue (“Thunderbirds”) do not exist].

There are several sources of information relevant to trips abroad:

The UK Foreign & Commonwealth Office web pages contain all the information to help make your trips as safe and enjoyable as possible: [http://www.fco.gov.uk/](http://www.fco.gov.uk/). Follow the links for “travel advice”.

If you need to undertake international trips for projects etc., please plan ahead. Discuss the project needs with your supervisors and the DSO, as required and submit the risk assessment form at least three weeks before you intend to travel.

College Occupational Health will provide advice on travel medication, injections etc., and will also undertake immunisation injections for College-required trips. However, you must arrange these well in advance of your trip (ideally, at least 1 month before travel).

PERSONAL PROTECTIVE EQUIPMENT

Personal Protective Equipment, (PPE) is an essential part of Civil Engineering site safety. In recognition of this PPE is an essential requirement for the field courses run by the department.

All first year undergraduate (MEng) students will be issued with a personal safety pack after Christmas, just prior to the commencement of their first fieldtrip. This safety equipment must kept safe and looked after because the items will be needed throughout the four year MEng degree. If you lose any items you will be charged for replacements. If you do not bring them to your course when required, you will not be permitted to undertake the module and may fail the course as a result.

The safety pack will comprise the following items:  

- Hard Hat
- Safety Glasses
- Site Gloves
- High-Vis Vest

Hard Hat

British Standard Hard Hats must be thrown away after four years, as their safety performance cannot be guaranteed after this time. MSc students will be issued with hard hats during field courses and other times as required, but these must be returned to the Department. The Department issues Hard Hats as part of the safety pack above for all undergraduate students in the Department. The Hats will be needed for most field courses over the 4 year course and must be looked after.

Safety Glasses

MSc students will be issued with safety glasses as required for laboratory and field courses. These are issued as part of the safety pack to the undergraduate students. Safety Glasses are required for all laboratory courses and most field courses. If you do not have a pair of safety glasses, you will be unable undertake the course.

IMPORTANT

The College Insurance Policy is NOT VALID if you take personal holiday whilst away for College purposes. YOU MUST ensure that you have separate, personal travel insurance for recreational activities, holidays and non-College related travel whilst away.
Gloves

Increasing concerns over dermatitis (from cement) and cuts and grazes from construction site activity has seen the compulsory wearing of gloves on all construction sites. A pair of cotton gloves suitable for site are included in the safety pack issued to the undergraduate students and these are needed for all site visits. MSc Students will be issued with a suitable type of glove for laboratory and fieldwork courses.

High-Viz Vests

Site visibility is a key part of safety management, hence all site visits require the wearing of high-viz vests or jackets. A high-viz jacket forms part of the Safety Pack, for UG students whilst MSc students will be issued with them as required.

Safety Boots

All undergraduates and some MSc students (Check your course information) must own a pair of safety boots. The footwear needs to be classified as complying with EN ISO 20345, which provides the highest level of impact resistance in the toe area and be fitted with a steel mid-sole with steel toe caps and offer ankle support.

Not only are safety boots essential for any visits to construction sites, but some laboratories within the Department require that they be worn at all times and they are needed for the Surveying, Geology and Constructionarium field trips during the 1st and 2nd years of the MEng degree respectively.

The Department will be arranging for a specialist supplier to attend the Skempton Building during the first week of term to sell these boots (check your course information for more details). The wearing of safety boots is compulsory during certain courses and failure to abide by this rule will result in you being barred from the course and possibly failing that module (and hence the year). Safety boots can be readily purchased from many high-street suppliers, but these must meet the minimum requirement described above.

Some MSc courses will issue the safety equipment as the class need arises, but this must be returned to the Department at the end of the class.

WEB RESOURCES FOR HEALTH AND SAFETY AT THE COLLEGE

The College Intranet, which is accessible for all College networked PC’s, has comprehensive health and safety information covering most aspects of the activities undertaken by the College. This information can be readily accessed from either the Safety Department or the Occupational Health web pages, which can be reached under the “A-Z” tab (admin and Services) on the right-hand side of the College main menu bar of the Home Page.

Some of this information is protected and you will need your College username and system password to view all the information contained within. You can access SALUS for reporting accidents and dangerous occurrences (as described above) from this site, plus view the College policy on health and safety and guidance on many aspects of safety.
COMPUTER USE

The Department is particularly well equipped with open access computing laboratories on levels 2 and 3 that are used for teaching as well as research purposes. However, it is becoming increasingly common for people who use computers or “display screen equipment” (DSE) for long hours to start to suffer from eye and skeletal/musculature problems, particularly if you use a laptop rather than a “fixed” desk computer. This may result in eye strain, back, neck and shoulder pain, problems with wrist and arm joints. The College has produced detailed guidance on ways of minimising/eliminating potential problems from DSE use. A copy of this information sheet is appended to this booklet. Please read and apply this information, it may save you much discomfort later in life.

If you undertake a project which involves long hours of computer use then you should follow the guidance below and undertake a DSE assessment of the workstation you are using. The “Computer Health & Safety Checklist” (DSE assessment) form is available to download from the following link:

http://www3.imperial.ac.uk/OCCHALETH/formsandchecklists

Computer Use – Healthy Working

All members of the college community use computers to a greater or lesser extent. You should undertake a simple DSE assessment of the workstation you are using.

It is becoming increasingly common for people who use computers or “display screen equipment” (DSE) for long hours to start to suffer from eye and skeletal/musculature problems, particularly if you use a laptop rather than a “fixed” desk computer. This may result in eye strain, back, neck and shoulder pain, problems with wrist and arm joints. This is called “Cumulative Trauma Disorder”. The set-up of your computer workstation is very important. A poor set-up may cause the above health issues. If you start to suffer from any of the above symptoms from using computers, you must contact the departmental Display Screen Assessor (Dr Fowler) for any questions or concerns you have with regard to healthy computer usage.

The following guidance will help you in minimising the likelihood of the symptoms developing indicative of Cumulative Trauma Disorder.

Staying Healthy With Your Computer

Avoiding Cumulative Trauma Disorder

Computers can damage your health. Every year we see several cases of Cumulative Trauma Disorder (CTD) formerly called RSI or Repetition Strain Injury in staff & students and the problem is becoming more common. Avoid it happening to you by taking care to organise your work-station and organise your time spent using a computer both at work and at home.

Follow these simple rules and find that your computer can work for you without causing harm.
Take Breaks - The Key Issues

1. Intersperse with other work (take note laptop users!): phone calls, writing/reading work, filing, proof reading, photocopying, talking with colleagues. Even coffee breaks!
2. Five minute break every hour and don’t spend a whole day on computer-based activities (applies equally to work at home). Web-surfing, updating Facebook, blogging or online gaming do not count as a break!

Keep Your Desk Tidy

Avoid cluttering it up with books, papers etc. Make sure you have enough clear space to operate your mouse easily and to access your keyboard. Keep most frequently used items close to hand to avoid stretching.

Adjust Your Computing Equipment to Suit You

1. Set your screen to a comfortable height, usually with the top just below eye level, so you do not have to stretch your neck. Avoiding any twist in your spine, sit face-on to your screen.
2. Ensure sufficient room to rest your hands in front of keyboard when not keying. Interchange position of keyboard and mouse depending on data input device predominantly in use at the time.
3. Adjust your seat height so your arms are horizontal to the keyboard and avoid flexing/extending wrists. If you use a laptop, work with it on a table, never on your lap.
4. Ensure room for your feet to rest under your desk. A footrest may be beneficial for small people.
Get Comfortable

Make use of the illustrations below to see whether you’ve organised your desk and your work to avoid unnecessary problems. The rules for desktop users apply to work with laptops; whenever possible the same advice should be followed.

Don't ruin your work by poor practice. Be organised, be sensible with your work-time & be successful—without damaging your health.

1. Adjust the seat height & back tilt/height to fit you. Twisted or cramped posture to be avoided.
2. If you are copying documents, use a document holder.
3. Sit back when you are thinking, rather than staying hunched over your screen.
4. Use a soft touch when keying and avoid flexing your wrists. Try to adopt a neutral position. If possible, learn how to use short cut keys and touch typing.
5. Give your eyes a comfort break too. Look away from your screen or close your eyes when thinking. Avoid staring at the screen & throw in a few extra blinks as natural blink reflexes are often unconsciously suppressed.

DON'T IGNORE SYMPTOMS

If your arms or shoulders start aching/tingling, follow steps below.

1. Take a break and re-organise work to give yourself more breaks in future.
2. If symptoms persist or keep recurring, contact your occupational health (OH) service for help.
Make Use of the Experts

1. All College departments should have a DSE (Display Screen Equipment) Assessor who knows about computer ergonomics and can help you check your workstation. They’ll help you with the computer checklist if you don’t feel confident to complete it yourself. Also if you identify problems through the checklist which you can’t solve yourself or which may affect your or other’s safety.
2. Your local OH service can assess and advise on CTD problems.
3. Students can arrange vision screening with the OH service.

Personal Safety for Laptop Users

1. Do not endanger your health by carrying too heavy a total load with the addition of your laptop.
2. Take precautions to avoid theft while your laptop is in transit and check your insurance cover. Your personal safety is more important than loss of your laptop.

Dr G. D. Fowler
Departmental Safety Officer
August 2018
An Introduction to using the SharePoint Site

Dr Geoff Fowler
Departmental Safety Officer

Risk Assessments

- All research activities undertaken in the College MUST have a risk assessment.
- Risk assessments MUST be done BEFORE the work starts.
- All the necessary forms and processes are available via a SharePoint system.
- Academic Supervisors must approve the assessment and electronically sign it off.
- Secondary Checker also approves (Lab manager or DSO)
The SharePoint Site

- An automated system to enable the creation of risk assessments and manage their approval and archiving
- Accessible from any Networked PC or VPN connection – use College ID and Logon
- Works with most internet browsers. It does not work in Linux

The SharePoint site allows you to attach extra information linked to your General Risk Assessment:

- COSHH Assessment
- Computer use (DSE)
- Fieldwork Risk Assessment
- These separate Word forms are all on Blackboard & SharePoint for download
Risk Assessment – A Step-by-Step guide

• Log onto SharePoint:
https://imperiallondon.sharepoint.com/sites/foe/CivilEng/HealthandSafety/default.aspx

• The Microsoft SharePoint logon page may open first, asking for your College username (“USERNAME”@ic.ac.uk). Enter your details and then you will be transferred to the Imperial College SharePoint logon page. Enter your College Password and then:

• The Department H&S SharePoint site will open

Use Explorer v10, Firefox or Chrome. It does not work in Linux or Explorer v11

Logging on to SharePoint – Initial 365 sign in

Enter your College username. Use “@ic.ac.uk” as the address identifier. The site will automatically forward you to the Imperial College SharePoint Office 365 (cloud-based) main login page.
Logging into SharePoint – Imperial 365 site

Enter your College password
Then click the "sign in" button.
The department Health and Safety site should open.

Department SharePoint Site

The menu on the left hand side of the page shows the site structure and the site functionality. Use this to navigate around the site.

Welcome to the Department Health and Safety site. On this site, you will find links to safety forms and places to store records. To start using the site please follow the guide below:

- New starters: Registration contains a link to the Day 1 induction, which your supervisor or导师 will take you through. When you have seen everything, you must then complete the Departmental induction form. The Departmental Code of Practice must be read and followed by all.
- Risk Assessment: To do "Create a Risk Assessment" - click "General Risk Assessment Form" to start. If you have uploaded existing risk assessments and uploaded operating procedures (OPs), you can upload a risk assessment form. Click on "General - OSRA" - biological work - "OSRA 1" then click "Risk Assessment and SOP Publishing".
- Incident: You can access your own risk assessments, record your equipment details and view other users' details."
Using the Site

• 1st step: Complete a General Risk assessment:
  - This covers many activities, but occasionally you will need to use special forms for certain tasks (COSH, Fieldwork, Biological work)
  - You need to identify all the risks and quantify them
  - Attach extra information including Engineering/experimental designs, SOPs etc.

• 2nd Step: submit your form(s) for approval:
  - Approvers may include: Your Supervisor, the Laboratory Manager, A qualified 2nd engineering academic (for Structures), the HoD (for hazardous fieldwork) & the DSO.

• 3rd Step: Forms are assessed and approved (or rejected) by your Supervisor & Lab Manager

SharePoint General Risk Assessment
How to complete the form (1)
Starting the form & selecting the assessors
SharePoint General Risk Assessment
How to complete the form (2)
Lone Working & Hazard Identification

Lone working is a significant issue of concern for the College. This section must be completed accurately & honestly.

Use these options to help identify hazards. Ticking a box opens a guidance section with links to a specific specialist risk assessment forms. The specialist forms (COSHH, Fieldwork etc.) must be completed too and attached to this form for submission and approval as part of this risk assessment process.

Complete all the sections. Any unanswered parts will prevent submission of the form.

Read the guidance & advice to understand what is needed here.

SharePoint General Risk Assessment
How to complete the form (3)
Risk assessment

Raw risk: Probability is always 4
Severity is selectable (1-4)

Use the help box to understand what severity and probability mean and the difference between each numerical value (1-4).

Identify each hazard on a separate line (dives can be added using the "insert another hazard box")

Attach all supporting documents here. These can include: COSHH forms, Fieldwork Forms, method descriptions, Biot approval forms, experiment design notes and other supporting documents.

Raw risk: Probability is always 4
Severity is selectable (1-4)

Use the help box to understand what severity and probability mean and the difference between each numerical value (1-4).

Identify each hazard on a separate line (dives can be added using the "insert another hazard box")

Attach all supporting documents here. These can include: COSHH forms, Fieldwork Forms, method descriptions, Biot approval forms, experiment design notes and other supporting documents.

Residual risk: Probability should have reduced
Severity is unlikely to change

Do not leave an empty line in this table – it will prevent the form from being submitted
SharePoint General Risk Assessment
How to complete the form (4).
Completion and Submission

Answer all these questions. Use the risk analysis outputs to ensure that you do not overlook any required measures.

Select a review period longer than the planned length of the project. If the assessment is for a 3 month MSc project, pick at least 6 months as the review period etc.

You do not need to complete the form in a "single sitting." You can save the form at any time and return to it later.

This box will remain unavailable until you have completed all the required sections/boxes.

Once you have completed the form and are happy with the content, you should submit it and await the assessors' opinion. Hopefully, they will approve it. If they do not, you should receive feedback on the rejection email stating what improvements are required. You will need to make the changes and resubmit the form.

You CANNOT start work until the form has been approved.

The SharePoint site allows you to attach extra information linked to your General Risk Assessment:

- **COSHH Assessment (Dept specific form)**
  - Legally required for any work involving harmful substances: Acids, gases, solvents, dyes, etc

- **BIO1 form**
  - College requirement for any work involving biological agents. Any Biological work MUST be discussed with the DSO before you do any preparation work

- **Fieldwork Risk Assessment (FW1)**

- Each of these forms are separate WORD documents available through SharePoint
5 Steps for undertaking a risk assessment

- Step 1: Identify the hazards
- Step 2: Decide who might be harmed and how
- Step 3: Evaluate the risks and decide on precautions
- Step 4: Record your findings and implement them
- Step 5: Review your assessment and update if necessary

Hazard & Risk Defined

- HAZARD: anything that may cause harm, such as chemicals, electricity, working from ladders, an open drawer etc;

- RISK: the chance, high or low, that somebody could be harmed by these and other hazards, together with an indication of how serious the harm could be.
Lone Working

- There must be at least one other person in a laboratory with you outside of normal hours.

- That person must know what to do in an emergency (A “BUDDY”).
  - How to stop the experiment
  - Emergency procedures
  - Who to call

- The best way to avoid lone working concerns is to plan your work

Research Specific Training

- It is essential that you know how to perform your research competently and safely.

- You are forbidden to use any item of Laboratory equipment or undertake a procedure until you have been appropriately trained

- If you have any doubts or concerns about the equipment or methods, even after training, then you must ask for more instruction.

- Failure to do this may result in harm to you, your colleagues and/or the equipment.

- This may result in prosecution of the College, your Supervisor and you.
FINALLY…

- If in doubt about any safety issue, ALWAYS ask somebody:
  1. Your Supervisor
  2. Laboratory Staff
  3. Department Safety Officer

If you have any questions about using the SharePoint Site, need assistance to complete a risk assessment or have any other safety-related questions, please contact the department Safety Officer:

CI9-STR-01 Concrete Materials

Course leader: Dr Hong Wong

Other contributors:

Module status: Core H2A2 (CS), H2U2 (CSBM), H2U6 (CSSD); Elective H2A1 (GSE)

Pre- or co-requisites: Spring

Term: Spring

Contact hours: 30

ECTS units: 5

FHEQ Level: 7

Assessment: Coursework, written examination

1.0 Aims

- To provide a good understanding of a range of topics within the field of concrete technology, including constituent materials and mixture proportioning, properties of concrete in the fresh and hardened state, microstructure, strength, volume changes, sustainability and durability.
- To understand the key physical and chemical processes influencing the behaviour and performance of concrete in service.

2.0 Syllabus

- Constituent materials used in concrete (cement, supplementary cementitious materials, aggregate, water and admixtures) with emphasis on their influence on the microstructure of concrete.
- Properties and behaviour of concrete including early age properties, mechanical properties, volume changes and durability.
- Typical problems affecting concrete and their prevention strategies.
- Design and selection of mix proportions to produce concrete with specified performance.
- Sustainability of cements and concretes

3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Understand how the constituents and mix proportion of concrete influence its early age properties, mechanical properties, volume changes and durability, via an appreciation of their influence on concrete microstructure.
- Gain the ability to design and proportion concrete mixtures to a specified performance.
- Become familiar with common problems affecting concrete in construction and their prevention.
- Appreciate the issues concerning sustainability of cements and concretes.

4.0 Teaching methods

The module is taught as a series of lectures, group discussions and embedded informal tutorials. Throughout the module, students work in teams on a project closely linked with the taught material. The module ends with a laboratory session to demonstrate the process of concrete production and tests methods for fresh and hardened concrete.

5.0 Assessment

The module will be assessed by a written examination and coursework. The split of the marks will be 80% for the exam and 20% for the coursework. The exam consists of essay and multiple-choice questions. The coursework requires students to work in small groups to produce a technical report and a lecture on a selected topic related to concrete technology. Detailed written and oral feedback will be given to students.

1.0 Aims

- To give students a good understanding of the design and behaviour of reinforced concrete structures at the design ultimate limit state.
- To look at the design of framed building structures in some detail, with particular emphasis on design for flexure, shear and torsion.
- To consider the design of shear walls.

2.0 Syllabus

This module will be delivered in a series of 3-hour slots. Topic covered will include:

<table>

3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:
• Understand structural behaviour and the background to the design methods in EC2 and other codes where appropriate.
• Have a good understanding of the design and behaviour of reinforced concrete structures at the ultimate limit state.

4.0 Teaching methods
A combination of lectures, tutorials and progress tests.

5.0 Assessment
There is one piece of design related coursework which draws upon the taught material which is worth 20%.

1.0 Aims

- To introduce the fundamental principles about the structural behaviour and design criteria of Prestressed Concrete Structures.
- To introduce the fundamental mechanics to define the internal forces.
- To review the current technology available to prestress concrete structures.
- To introduce the formulae to estimate the initial and time-dependent losses.
- To emphasise the fundamentals but reference is made to Eurocode 2.
- To present the serviceability limit states that are critical for the design of conventional prestressed concrete structures and the inequalities to fulfil such limit states are derived, allowing the prestressing force and its eccentricity to be determined.
- To cover the specific implications for the ultimate limit states.

2.0 Syllabus

- Concept of prestressing (historical approach, and prestressing types).
- Structural analysis of prestressed statically determinate structures including: Anchorage and deviating forces introduced by the tendons; Internal forces and strains due to prestressing; Tendon centroid, and prestressing layouts; Mechanical properties before and after grouting; Introduction of self-weight during prestressing in post-tensioned structures; Introduction of lateral bending during prestressing in post-tensioned structures.
- Structural analysis of prestressed statically indeterminate structures including: methods for the analysis of prestressed statically indeterminate structures: Primary, secondary and total internal forces due to prestressing.
- Prestressing technology including: Steel products and technologies for prestressing (strands, tendons, bars); Anchorage systems, ducts, couplers; Technological requirements for the prestressing layouts; Threading, prestressing, and grouting; External prestressing technology.
- Prestressing losses: Concept of loss and classification of losses (initial and long-term losses); Frictional losses; Elastic shortening losses; Anchorage drawn-in losses and transmission lengths;
Prestressing strategies; Prestressing losses due to concrete creep, concrete shrinkage and steel relaxation.

- Serviceability limit state including: SLS of normal tension stresses (decompression, cracking, and crack opening limit states); SLS of normal compression stresses; SLS deformation, SLS vibration; Prestressing approaches and classes.
- Design of prestressed structures: Central kern; Inequality equations for the design of prestressed concrete structures; Magnel diagrams; Regions where the centroid of the prestressing layout has to be located; Relation between section efficiency and amount of prestressing.
- Specific implications for ultimate limit states.
- Anchorage zones.
- Prestressed concrete slabs.

3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Obtain the internal forces due to the prestressing in a prestressed concrete structure, being able to identify the primary and secondary components of the total internal forces.
- Evaluate the initial and time-dependent losses.
- Propose an appropriate system to prestress a particular structure.
- Design the prestressing layout and the prestressing force that fulfils the relevant limit states.

4.0 Teaching methods

A combination of lectures and tutorials.

5.0 Assessment

Assessment will be 75% written examination and 25% coursework (MSc)/100% written examination (UG).

6.0 Recommended textbooks

CI9-STR-06   Finite Element Analysis

Course leader: Professor Bassam Izzuddin

Other contributors:

Module status: Core: H2A3
Elective: H2A2, H2U5, H2U6, H2A1, H2U5, H2U7, H2U9

Pre- or co-requisites:

Term: Autumn
Contact hours: 30
ECTS units: 5
FHEQ Level: 7
Assessment: Coursework, written examination

1.0 Aims

- To present the finite element method for structural analysis, to investigate the accuracy and convergence characteristics of various finite elements.
- To consider modelling strategies for improved accuracy and efficiency.
- To encourage the use of finite element software for advanced structural analysis.

2.0 Syllabus

- Introduction to the finite element method.
- One-dimensional element formulation for beams and frames.
- Two-dimensional plane stress/strain formulations.
- Higher-order formulations for plane stress/strain analysis.
- Error estimation and adaptivity in finite element analysis.
- Plate bending elements.
- Application of finite element analysis program ANSYS to structural engineering problems.

3.0  Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Appreciate the use of hierarchic subdivision processes in tackling complex problems.
- Understand the formulation of typical finite elements for structural analysis and the associated sources of approximation.
- Use finite element analysis software.
- Use computers for simulations.
- Apply techniques of linear algebra.

4.0  Teaching methods

Handouts are provided for the various topics, and extensive use is made of interactive PowerPoint to elaborate on concepts and application issues. All material, including handouts, PowerPoint lecture notes and solutions to tutorial problems, are placed on Blackboard Learn for student access. Computer laboratory sessions are also provided making use of screen projection to introduce finite element analysis software.

5.0  Assessment

Assessment is by written examination and project coursework, with respective marks split of 80:20.

6.0  Recommended textbooks

1.0 Aims

- To provide students with a general grounding in the basic concepts and principles of dynamics as applied to structural engineering problems.
- To introduce the students to the most common dynamic phenomena in structural engineering and train them in the application of appropriate idealization approaches, their analytical formulation and their mathematical solution.

2.0 Syllabus

- Undamped free vibrations. Damped free vibrations. (CM)
- Forced vibration response to harmonic excitation. Dynamic magnification factor and response spectra. (CM)
- Introduction to non-linear dynamics of single-degree-of-freedom systems. Dynamic characteristics of non-linear systems. Friction damping. Simplified approximations and ductility-reduced spectra. (CM)
- Multi-degree-of-freedom models. Formulate equations of motion in both a stiffness and flexibility format and determine natural frequencies. (LL)
- Use orthogonality to uncouple equations of motion to format series of SDOF models using generalised coordinates. (LL)
- Use of response spectra to solve MDOF systems subjected to either pulse loads or a ground motion. (LL)
- Use conservation of energy to formulate pressure impulse diagrams for idealised systems subjected to blast loads. (LL)
3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Analyse and interpret the dynamic response of conventional structural systems and gain insight into their time-dependent nature.
- Formulate appropriate models of simple structural systems under dynamic conditions and apply them to the solution of engineering problems.
- Estimate the natural frequencies and vibration modes of elastic and multiple degree of freedom systems.
- Evaluate maximum values of significant structural response parameters for systems subjected to the most usual forms of dynamic excitation.
- Appreciate the phenomena involved in the loss of linearity in the dynamic response of simple structures as well as the engineering approaches employed to model them appreciating their limitations.

<td>03</td>
<td>Serviceability limit states of deflection. Issues such as choice of material properties, the influence of construction loading on long term deflection and input parameters for FEA will be considered.</td>
<td>RLV</td>
</tr>
<tr>
<td>04</td>
<td>Serviceability limit states of cracking. Issues such as load induced and early age thermal cracking will be considered.</td>
<td>RLV</td>
</tr>
</tbody>
</table>

### 3.0  Intended learning outcomes

On successfully completing this course unit, students will be able to:
• Build upon the material covered in Reinforced Concrete I.
• Have an in depth understanding of the design and behaviour of reinforced concrete structures and the related design clauses of Eurocode 2.

4.0 Teaching methods
A combination of lectures and tutorials.

5.0 Assessment
Assessment is through coursework and examination. There will be one piece of coursework which will involve the application of the taught material.

1.0 Aims

- To present systematic procedures for geometric and material nonlinear structural analysis.
- To introduce and encourage the use of advanced nonlinear analysis software and to explore the significance of common nonlinear phenomena, particularly in relation to the structural response under extreme events.

2.0 Syllabus

- Fundamentals of geometric nonlinearity for discrete structural systems.
- Principles of stability and buckling analysis for discrete structural systems.
- Nonlinear solution procedures for tracing equilibrium paths.
- Geometrically nonlinear finite elements for one-dimensional structural systems.
- Materially nonlinear finite elements for one-dimensional structural systems.
- Nonlinear dynamic analysis of discrete structural systems (only MSc).

### 3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Distinguish between linear and nonlinear structural analysis.
- Recognise types of problem for which nonlinear structural analysis is necessary.
- Understand principles of stability for multi-degree of freedom structural systems.
- Appreciate the basis of sophisticated and simplified buckling analysis methods.
- Use equilibrium paths to characterise the nonlinear structural response.
- Understand basic incremental iterative solution procedures for tracing equilibrium paths.
- Appreciate the fundamentals of nonlinear finite element discretisation, including geometric and material nonlinearity.
- Appreciate the use of hierarchic processes in tackling complex problems.
- Recognise the role of analogies in gaining greater understanding.
- Use nonlinear structural analysis software.
- Perform simplified buckling analysis.
- Use computers for simulations.
- Solve a nonlinear system of equations.
- Apply techniques of linear algebra.

### 4.0 Teaching methods

Handouts are provided for the various topics, and extensive use is made of the visualiser to elaborate on concepts and application issues. All material, including handouts, visualiser lecture notes and solutions to
tutorial problems, are placed on Blackboard for student access. Computer laboratory sessions are also provided making use of screen projection to introduce finite element analysis software.

5.0  Assessment

Assessment will be via written examination and project coursework, with respective marks split of 70:30.

CI9-STR-13 Seismic Design of Concrete Structures

Course leader: Professor Ahmed Elghazouli
Other contributors: Dr Lorenzo Macorini, Dr Damian Grant, Edmund Booth
Module status: Core H2A3 (EQ)
Elective H2A2 (CS), H2U2 (CSBM), H2U6 (CSSD)
Pre- or co-requisites: 
Term: Spring
Contact hours: 30
ECTS units: 5
FHEQ Level: 7
Assessment: Written examination

1.0 Aims

- To introduce the students to the fundamental concepts and principles required for the seismic design of reinforced concrete and masonry structures.
- To enable the students to develop an understanding of the seismic behaviour of concrete and masonry materials, components and systems under typical earthquake loading conditions.
- This knowledge can then be applied in practical earthquake resistant design of frame and wall systems according to modern codified regulations, with particular emphasis on the European seismic design code, Eurocode 8.

2.0 Syllabus

- Introduction to the design of earthquake-resistant building structures in relation to the characteristics of different structural forms in reinforced concrete.
- Overview of codified procedures for the seismic design of concrete structures with emphasis on the provisions of Eurocode 8.
- Assessment of curvature, rotational and displacement ductility supply and demand in reinforced concrete members.
- Design and detailing of concrete members and joints in moment frames according to the recommendations of Eurocode 8.
- Behaviour and design of reinforced-concrete shear wall systems under seismic loading conditions with application to Eurocode 8.
- Performance and design of masonry structures and masonry-infilled frames under lateral seismic loads.
- Estimation of the flexural stiffness of concrete elements under seismic loading.
- Introduction to displacement-based seismic design.
Overview of key concepts relating to the seismic design of concrete diaphragms and foundations.

Overview of key concepts relating to the seismic repair and upgrading of reinforced concrete and masonry structures.

</tr>
</tbody>
</table>

3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Understand the response characteristics of typical materials, members and components under cyclic and earthquake loads.
- Estimate the curvature and deformation ductilities of critical structural members and components, and their use within seismic design procedures.
- Understand the concept of performance based seismic design and the means of achieving performance goals in buildings.
- Appreciate the key behavioural characteristics of concrete frame and wall systems under cyclic and earthquake loads.
- Understand basic concepts of scheme design of concrete and masonry buildings for earthquake resistance.
- Understand basic concepts of seismic design of concrete diaphragms and foundations.
- Apply the main design rules and detailing requirements for frame and wall systems according to the provisions of Eurocode 8.
- Have a general understanding of the methods adopted for the seismic repair and strengthening of building structures.

4.0 Teaching methods

The module involves a series of lectures and tutorials, with additional practical exercises to be completed by the students in their own time.
### 5.0 Assessment

Assessment is by written examination only.

1.0 Aims

Undertaken over the final four months of the course, students will aim to complete either:

1. One group-based conceptual design project and a detailed individual design project, or
2. One group-based conceptual design project and a research-oriented dissertation

Both the Conceptual and Detailed Design projects may be undertaken in the design of a steel or concrete building, or a bridge.

The principle aim of the Design Project – Dissertation is to assess the capability of students to undertake independent research-based work. While the research focus of the dissertations is relatively clear, the detailed individual design projects also include a significant component of research.

2.0 Syllabus

During the course of this module students will complete the following projects:

**Conceptual design project:** a group exercise conducted over a two-week period that requires teams of students to propose conceptual designs for particular problems dictated by a given brief. All students are required to complete one of these projects prior to commencing their detailed design project or research dissertation.

**Detailed design project:** a major design project involving detailed design of a complete structure. Students are required to submit a detailed written report and give an oral presentation. The aim of this project is to give students the opportunity to apply the knowledge they have accumulated from the taught modules and to gain experience in tackling the design of a complete system. The projects also include a research component that accounts for 30% of the final grade.
**Research dissertation:** the purpose of this work is to develop skills in tackling challenging technical problems at a fundamental level, under the supervision of a member of the academic staff and culminating in a formal dissertation and oral examination. The standard of work required is similar to that for a refereed publication.

Part-time students can start preparing for their dissertation/project (reading, collecting information, learning tools, etc.) at any stage during their studies. However, we expect the main part of conducting the work to be during the last year of the course, including the submission/assessment, as only then will these students have completed all of their taught components.

Part-time students should follow exactly the same timetable for design projects, including submission date, as full-time students.

**Information Note:**

Unlike plagiarism, which equates to copying, collaboration is a professional skill that is encouraged: it should involve mutual effort. Where coursework is specifically set as Group Work, the collaboration will involve the presentation by two or more students of a single report, together with related drawings and calculations, as the joint work of the group. Most coursework, however, is intended to be Individual Work, submitted under the name of a single student. Collaboration may involve you discussing with other students the intention of the project brief, ways and methods of carrying out the investigation and possible sources of reference. However, the obtaining of results, by observation or calculation, must be your own individual work, as must be the report, drawings etc. in which you present the results of your investigation.

The Conceptual Projects are joint- or group work whereas the Detailed Design Projects and Research Dissertations are individual.

### 3.0 Intended learning outcomes

Students should finish this module having gained a deep understanding of the topic on which they have decided to write their dissertation/project. They will have developed skills in overcoming technical problems, presenting their work and in applying the knowledge they have learnt in taught modules to conduct research and compose their own work. In addition to students applying material they have been exposed to during their taught modules, the students will almost certainly develop new skills relevant for their particular topic that will extend far beyond the taught modules. This may include learning new pieces of software, programming languages, analytical approaches, and experimental techniques, among others.

### 4.0 Teaching methods

**Conceptual design project:** Students attend a project induction session and two tutorial workshops over the two weeks of the project, which culminates in a presentation attended by all students and a minimum
of two assessors, one being the project coordinator. Attendance at all sessions is compulsory and all students are required to attend the presentations on the final day and also to take part in the presentations.

**Detailed design project:** Students undertaking these projects commit to a rigid framework of attendance, starting with the project induction and then weekly tutorial workshops for the first (normally) five weeks of the project. Attendance is compulsory. For those students undertaking the Detailed Design of a Tall Building (Steel) project, students must demonstrate to the project leader a good foundation in Structural Dynamics at undergraduate level or attendance at the autumn term Structural Dynamics module as a compulsory pre-requisite.

**Research Dissertation:** You will be supported by your personal supervisor who will oversee your progress and offer any assistance you may require.

A training workshop is provided by the Library staff on the use of referencing software and the avoidance of poor academic practice.

**Information Note: Attendance**

*Students are subject to the same attendance requirements during the course of the project element of the programme as with the taught element.*

### 5.0 Assessment

<table>
<thead>
<tr>
<th>Total Marks Allocated</th>
<th>300</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Conceptual Project</strong></td>
<td>30</td>
</tr>
<tr>
<td><strong>Detailed Project or Dissertation</strong></td>
<td>270</td>
</tr>
</tbody>
</table>

A single mark is returned on your degree transcript which will be in percentage format.

**Conceptual Design Project** students will present their design to an audience of academic staff and their peers. All students within each group must present and participate.

**Individual Design Project** students will present their design to an audience of academic staff and their peers.

**Dissertation students** will undertake an oral *(viva voce)* exam involving the supervisor and an internal examiner drawn from the Board of Examiners.

All work is double-marked and subject to review by both External Examiners for the Advanced Structural Engineering MSc cluster.
Information Note ~ Failure in Project-Dissertation

This is potentially more serious than examination failure for the following reasons:

- Access to further supervision is not offered to the same level as during the first attempt;
- Access to College facilities, i.e. libraries, computing and software, is likely to be limited;
- Visa restrictions may complicate interaction with staff;
- Peer support will normally not exist.

Criteria for the Marking of Projects, Dissertations and Coursework Exercises

In the case of major projects/dissertations, assessment should first be made under four general categories:

1. Evidence of enquiry, creative ability, critical thought
2. Level of understanding
3. Level of effort, competence and quality
4. Clarity and style of presentation (including Viva-Voce)

Particular value should be attached to work that is regarded as intellectually challenging. The project/dissertation should then be considered as a whole and its features matched against the written criteria as a benchmark.

Note: The projects also include a research component that accounts for 30% of the final grade. Marks in brackets () denote the breakdown in mark allocations to be awarded for work of an investigative nature.

Selection Process

Conceptual Design ~ your choice of project is nominally free, although there are limits in place on total numbers and preferred group sizes. You will be asked to indicate your choice of project in order of preference. In the event that a project is over-subscribed your Student Course Representatives or staff will be asked to assist with the final allocations.

For those of you who will be undertaking a Detailed Design Project rather than a Research Dissertation, there is NO requirement that you take the related Conceptual project, i.e., concrete detailed design students need not have taken the concrete conceptual project. In fact, it is an opportunity for you to cover a broader syllabus.

The nominal caps and group sizes are:
- Steel Conceptual (Groups of 5 students, maximum 6 groups) - Cap of 30
- Concrete Conceptual (Groups of 4 members)
- Bridge Conceptual (Groups of 5 students, maximum of 6 groups) - Cap of 30

Dissertation-Design Project ~ the allocation of students to either the detailed design project, or to a dissertation topic takes place towards the end of the spring term. Each year three detailed design projects are offered, with a nominal cap on student numbers of 12 students per project. The particular brief for each of these projects varies each year. The research dissertations naturally vary more significantly from year to year. The particular topics that can be undertaken can be defined in two ways. The principle way is that
academic staff provide a list of topics that is circulated to the students. The students may then express interest in particular topics, and for a limited period of time there is an opportunity to reach an agreement with the relevant academic for a student to be allocated to this topic. Students can also, through discussion with an appropriate academic, propose their own area of investigation. Input from a member of academic staff is crucial if following this route in order to ensure an appropriate scope and level of difficulty is targeted from the outset.

<td>Refer to Supervisor</td>
</tr>
</tbody>
</table>

Students that are unable to secure an agreement with a particular academic to undertake one of the design projects or dissertation topics are then allocated to topics following a system that considers the preferences of the students, among other constraints. The overwhelming majority of students tend to be allocated the topic that they are most interested in.

Specific details about the above process are circulated during the spring term and the process is also described verbally at an earlier date.

### 6.0 Recommended textbooks

There are no specific textbooks, but detailed guidelines will be provided for the layout, presentation and submission of dissertations.

Specification Documents (Project Briefs) are provided for the Detailed Design Projects. These include all instructions on layout and presentation. Submission information is also provided.

All students are required to submit electronic copies of their submission to a Turnitin-enabled Dropbox via the Blackboard Learn VLE. These are set up in advance and will give students the opportunity to undertake multiple submissions in advance of final submission. Library staff provide backup and clinics for students in the interpretation of the Similarity Indices generated by the Turnitin software.
7.0 Subject threads

CI9-STR-21 Seismic Design of Steel Structures

Course leader: Professor Ahmed Elghazouli

Other contributors:

Module status: Core H2A3 (EQ)
Elective H2U5 (SSD), H2U7 (SSDBM), H2U9 (SSDS)

Pre- or co-requisites:

Term: Spring
Contact hours: 30
ECTS units: 5
FHEQ Level: 7
Assessment: Coursework, written examination

1.0 Aims

- To introduce the students to the fundamental concepts and principles required for the seismic design of steel structures.
- To enable the student to develop an understanding of the seismic behaviour of steel members, connections and systems under typical earthquake loading conditions. This knowledge can then be applied in practical earthquake resistant design of common forms of steel structures according to modern codified regulations, with particular emphasis on the European seismic design code, Eurocode 8.

2.0 Syllabus

- Observations from post-earthquake field observations with emphasis on common damage patterns in steel structures.
- Brief revision of structural dynamics principles for single and multi-degree of freedom systems for the case of applied base excitations.
- Structural analysis methods for the seismic response assessment of building structures including review of fundamental structural dynamics concepts.
- Overview of the principles of performance-based seismic design, failure mode control and capacity design.
- Introduction to the design of earthquake-resistant building structures in relation to the characteristics of different structural forms in steel structures.
- Assessment of the seismic behaviour of steel materials, members and connections to cyclic and seismic loading conditions.
- Overview of codified procedures for the seismic design of steel structures with emphasis on the provisions of Eurocode 8.
- Design of moment resisting steel frames according to the provisions of the European seismic code, Eurocode 8.
• Design of concentrically braced steel frames according to the provisions of the European seismic code, Eurocode 8.
• Design of eccentrically braced steel frames according to the provisions of the European seismic code, Eurocode 8.

</tr>
</tbody>
</table>

3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

• Determine seismic actions on typical steel structures using simplified methods derived from fundamental structural dynamics concepts.
• Identify suitable lateral resisting systems which are capable of providing effective earthquake resistance for steel building structures.
• Understand the response characteristics of typical steel members and connections under cyclic and earthquake loads.
• Appreciate the typical damage patterns that are observed in steel structures on the basis of experience from previous seismic events.
• Understand the concepts of capacity design and failure mode control and their deployment in modern codes of practice including Eurocode 8.
• Understand the main behavioural features of moment and braced steel frames under seismic loading conditions.
• Apply the main design rules and detailing requirements for moment resisting and braced steel systems according to the provisions of Eurocode 8.

4.0 Teaching methods

The module involves a series of lectures and tutorials, as well as design examples and exercises covering the practical aspects of the subject.

5.0 Assessment

Assessment will be via coursework and written examination.

CI9-STR-24 Structural Stability

Course leader: Professor M. Ahmer Wadee
Other contributors: GTAs
Module status: SSD (Core) – General (Elective) – Concrete (Elective)
Pre- or co-requisites: N/A
Term: Autumn
Contact hours: 30
ECTS units: 5
FHEQ Level: 7
Assessment: Written examination

1.0 Aims

- To give students a rigorous grounding in the behaviour of structural components that suffer from failure due to geometric, rather than material, nonlinearity; the principal features being that failure primarily occurs in the elastic range and due to buckling. It is a course based on fundamental mechanics that is designed to give the theoretical background to the more practical design-based modules.

2.0 Syllabus

- Instabilities in struts and columns: direct equilibrium and energy formulations; Euler load and the elastica; effective length concept. Approximate methods of analysis: Rayleigh and Timoshenko methods. Ultimate strength of real columns using the Perry-Robertson formulation and the development of methods for designing steel columns up to and including Eurocode 3.
- Multiple degree-of-freedom elastic systems: diagonalised systems; elimination of passive coordinates; non-trivial fundamental paths; introduction to mode interaction.
- Instabilities in beams: direct equilibrium and energy formulations, critical moment for lateral-torsional buckling, general loading cases and effective lengths. Description of the method for designing steel beams in Eurocode 3.

</tbody>
</table>

### 3.0 Intended learning outcomes

On successfully completing this course unit, students will have:

- A rigorous grounding in the theory of structural stability and nonlinear structural behaviour.
- An appreciation of the potential failure modes that can occur due to geometric nonlinearity.
- The techniques to classify post-buckling phenomena.
- The techniques to analyse geometrically perfect and imperfect systems for structural stability.
- An appreciation of the differences between linear and nonlinear buckling analysis.
- An understanding of how basic structural components behave when they are subject to instability.
- The techniques to analyse basic structural components that are susceptible to instability.
- An appreciation of the fundamental basis of design rules concerned with structural instability.
4.0 Teaching methods

Each session is 3 hours long. The course has lectures and supporting tutorials. Staff and GTAs will be available to answer specific questions.

5.0 Assessment

Assessment is by written examination only.

CI9-STR-25 Design of Steel Buildings

Course leader: Dr Luke Louca

Other contributors: 

Module status: Pre- or co-requisites: CI9-STR-24, CI9-STR-19, CI9-STR-34

Term: Spring

Contact hours: 30

ECTS units: 5

FHEQ Level: 7

Assessment: Coursework, written examination

1.0 Aims

- To teach the fundamentals of the conceptual design of a range of structural framing systems used in the construction sector. This is achieved through issues related to structural form and behaviour, analysis, practical considerations in steel fabrication and codification using EC3.
- To integrate some of the structural analysis studied previously such that it can be used to provide approximate and quick design methods for guidance on initial sizing.

2.0 Syllabus

- Introduction – steel construction and design.
- Case studies of structural failure.
- Simple Building Frame Design: Floor Systems; Behaviour of Bracing systems; Beam Column Behaviour.
- Trusses – Basics.
- Composite beams.
- Floor systems – morphology and vibrations.
- Tall Building systems.

3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Develop stable framing schemes for both low and high rise steel structures.
- Determine deflections of braced framed systems.
- Design braced frame systems using simple connection details.
- Understand the behaviour of composite floor morphologies.
- Carry out simple structural design computations for beam and column framed systems.

4.0 Teaching methods

The application of the design issues is assessed through a group based coursework exercise and an examination.

5.0 Assessment

Assessment will be via coursework and written examination. The weighting of exam to coursework is 70:30. Students are required to bring BS EN1993-1-1:2005 and the Section Table Booklet to the examination.

6.0 Recommended textbooks

3.0 Intended learning outcomes

By the end of the course, students should be able to:

- Understand the elastic buckling and post-buckling of plates under in-plane loading.
- To design stiffened compression flanges and plate girders.
4.0  Teaching methods

A mixture of lectures and tutorials focusing on:

- Large deflection plate theory; laterally loaded plates; elastic post-buckling of axially compressed perfect and imperfect plates.
- Collapse of plates in compression: effective width concept, effect of imperfections and residual stresses; code design.
- Stiffened plates in compression and bending: elastic buckling analysis, beam-column behaviour orthotropic action, local and overall buckling; design of compression flanges, slenderness limitations for stiffeners.
- Plate girders: critical buckling of plates in shear, tension field theory; design of plate girders under bending and shear.
- Box girders: plates under combined loading, web panel design, treatment of web stiffeners.

1.0 Aims

- To understand structural steel physical metallurgy.
- To apply this knowledge to the manufacture of steels, including welding.
- To understand the factors leading to corrosion and brittle fracture of steel.

2.0 Syllabus

Underlying chemistry of steel alloys; steel manufacturing methods; microstructure development and the effect of heat treatments; properties of steels, including a qualitative treatment of brittle fracture; quality control principles; methods of fabrication; tolerances and workmanship; connection philosophy; welding technology; corrosion; non-destructive testing; use of relevant codes.

3.0  Intended learning outcomes

On successfully completing this programme, students will have:

- Knowledge of the basics of steel metallurgy.
- An understanding of how to change the mechanical and corrosion properties of structural steel, including a basic understanding of how to assess steel for flaws.
- Knowledge of the manufacturing processes for steels and their effect on steel properties, including the effect of welding.
- Knowledge of corrosion processes and corrosion prevention techniques for steel structures.

4.0  Teaching methods

Teaching is primarily by lectures. There will be a visit to a university lab to illustrate some of the mechanical testing techniques used.

1.0 Aims

This module is intended to bring all students to a similar level as far as fundamental structural analysis is concerned. It comprises two distinct parts: mechanics of materials and physical behaviour of structural elements; and common structural analysis methods. The material is viewed as the ideal core knowledge that would be expected of postgraduate students with an undergraduate background in civil, mechanical or structural engineering.

2.0 Syllabus

- Beam biaxial and asymmetric bending
- Twisting on thin-walled beam cross-sections
- Shear flow in thin-walled beam cross-sections
- Elasticity including plane stress and plane strain and the Airy stress function
- Plasticity including common yield criteria
- Plate bending
- Plastic analysis
- Virtual work and static indeterminacy
- Flexibility method for single and multiple static indeterminacy
- Kinematic indeterminacy
- The stiffness method
- Computational implementation of the stiffness method
3.0 Intended learning outcomes

It is intended that by the end of the course students should be able to analyse common structural forms using the flexibility and stiffness methods. Students should be aware of how to implement the matrix stiffness method using software such as Matlab, as well as being able to check their analyses using software such as Oasys GSA.

Students should have an appreciation of the elastic behaviour of structural elements, including definition of sectional properties, response to axial and shear force, biaxial and asymmetric bending, and twisting moments. Students should appreciate the difference in formulations when operating in principal and non-principal axes. Students should have an appreciation of the existence of alternative beam theories and be aware of the implicants of assumptions adopted when using Euler-Bernoulli beam theory.

Students should appreciate the three dimensional behaviour of materials, including formulation of stiffness and compliance matrices, and implications of plane strain and plain strain assumptions. Students should also appreciate plastic yield criterion and implement plastic analysis with upper and lower bound methods at a basic level.

4.0 Teaching methods

The module is delivered through a blend of traditional lectures, private study to be completed prior to lectures, small group tutorials and individual exercises. It will be difficult for you to keep up with the course if you do not participate and engage with the active learning exercises on it.

5.0 Assessment

Examination 80%, Coursework 20%

1.0 Aims

- To introduce students to the design and construction of bridges. This module covers the structural behaviour of the main longitudinal and transverse bridge typologies, the fundamental design principles, and main construction procedures for short, medium and long span bridges.
- To provide the students with the minimum knowledge threshold to be able to participate in the Conceptual Project on Bridges, and the Bridge Detailed Project, offered as part of the MSc programme over the summer term.

2.0 Syllabus

- The structural behaviour and design principles for the main longitudinal (such as beams, portal frames, arches, cable-stayed bridges, and suspension bridges) and transverse (such as beams, slabs, and box girders) bridge typologies.
- The preliminary design of prestressed concrete composite bridge decks, and steel-concrete composite bridge decks.
- The design of different bridge components and elements (such as parapets, waterproofing, drainage, bearings, joints, abutments, piers, etc.).
- The main bridge construction procedures.

</tr>
</tbody>
</table>
### Advantages and disadvantages of this transverse scheme

- Transverse load distribution
- Structural behaviour under uniform distributed loads
- Structural behaviour under point loads

#### Transverse schemes. Slabs

- Section types (solid and voided slabs)
- Advantages and disadvantages of this transverse scheme
- Transverse load distribution
- Voids geometry
- Transverse sections in both variable-depth decks variable-width decks
- Diaphragms at support sections

#### Transverse schemes. Box girders

- Sections types for prestressed concrete, composite, and steel decks
- Advantages and disadvantages of this transverse scheme
- Structural behaviour under uniform distributed loads
- Structural behaviour under point loads
- Effective width
- Diaphragms

#### 04 Longitudinal schemes. Beams

- Types
  - Statically determinate beams (uniform depth, fish-belly shape, Gerber; advantages and disadvantages)
  - Statically non-determinate beams (constant/variable depth; advantages and disadvantages)
  - Appropriate transverse types for different span lengths
- Geometry of continuous bridges (constant/variable depth)
- End spans in continuous bridges
- Coupled torsion and bending responses in curved beams

#### Longitudinal schemes. Portal frames

- Advantages and disadvantages of this longitudinal scheme
- Types

#### Longitudinal schemes. Arches

- Span ranges
- Types
- Antifunicularity
- Superior deck arch bridges (links between elements; geometry; arch cross-sectional section; rigid and deck-stiffened arches)
- Inferior deck arch bridges / Tied arch bridges / Bow strings (behaviour; stays / hangers)

#### 05 Longitudinal schemes. Cable-stayed bridges

- Span ranges
- Types
- Structural behaviour under permanent and live load
- Efficiency of cable-stayed bridges

---

ART
Longitudinal and transverse stay cable arrangement
Deck cross-sectional sections (for different stay cable configurations; for different spans)
Tower types
Configuration of cable-stayed bridges with two, three and multiple spans
Ernst modulus
Stay cables

Longitudinal schemes. Suspension bridges

Introduction to FE models for structural analysis of bridges
Grillage models for beams, slabs and box girders
FEM

3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Develop the conceptual design for short, medium and long span bridges.
- Understand the structural behaviour of the different longitudinal and transverse bridge types.
- Select appropriate longitudinal and transverse schemes for particular cases.
- Determinate the actions to be considered for the design of a bridge according to Eurocodes.
- Propose conventional models for structural analysis of bridges.
- Design a concrete or steel composite bridge deck of medium span according to Eurocodes.
- Selection of bearings, joints, piers and abutments.
- Select the appropriate construction method.

4.0 Teaching methods

A combination of lectures and tutorials.
5.0  Assessment

Assessment is via examination.

1.0 Aims

- To introduce students to the fundamental concepts and principles of structural safety. The approach to assessing the safety of both new and existing structures is considered, with techniques relevant for the latter being emphasised.
- To introduce the students to the most common quantitative approaches of structural reliability theory as well as to enable students to understand how such quantitative probabilistic approaches manifest in codes of practice.
- While the principle aim of the course is to promote understanding of the methods of structural reliability theory, a secondary aim is for students to appreciate the power of probabilistic methods in structural engineering.

2.0 Syllabus

- Principles of Structural Safety.
- Fundamentals of Probability Theory: Univariate and multivariate probability distributions; Correlation; Bayesian inference; Probabilistic transformations; Combinations of random variables.
- Reliability Theory: Specification of limit-state functions; Cornell reliability index; Hasofer & Lind reliability index; Rosenblatt & Nataf transformations; Design points, FORM, SORM, linear and nonlinear limit state functions.
- Simulation techniques: Crude Monte Carlo, Latin Hypercube sampling, Importance sampling.
- System Reliability: Series systems, parallel systems, and k-out-of-n systems; Structure functions, cut sets and path sets; Correlated modes of failure; Failure domains for systems.
- Background to EN1990: Probabilistic formulations in codes, partial factors, safety factors, combination factors, loading levels.
- Life-cycle Analysis: Time-value of money; Cost-benefit analysis; Decision theory; Reliability profiles; Time-controlled and reliability-controlled maintenance strategies; Time-dependent capacity and loading, time-dependent reliability formulation.
### 3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Understand the framework under which structural codes are developed, with particular reference to EN1990.
- Quantitatively describe loadings, in a probabilistic manner, for a variety of circumstances.
- Evaluate the nominal probability of failure of a structure using a time-independent reliability formulation.
- Employ a Bayesian framework to incorporate information from structural testing and inspection in order to modify models for structural capacity.
- Undertake First Order and Second Order reliability analyses for structural components.
- Apply simulation techniques, including crude Monte Carlo and Importance sampling, to evaluate the reliability of structural components or systems.
- Describe the capacity of structural systems using combinations of series, parallel and k-out-of-n subsystems.
- Understand the time-dependent nature of structural reliability and develop quantitative models for the time-dependent capacity of structures.
- Understand the key concepts of life-cycle cost analysis and to make considered judgements regarding optimal maintenance and/or repair strategies.
- Appreciate the power of probabilistic methods in structural engineering.
- Identify optimal values for partial factors and load factors in order to achieve a pre-determined level of reliability.

### 4.0 Teaching methods

1.0 Aims

- To introduce the students to the fundamental concepts and principles of the analysis and design of thin-walled shelled structures.
- The module begins with an introduction to membrane theory for common shapes of axisymmetric structural shells, followed by an overview of axisymmetric bending theory for cylindrical shells and an introduction to the phenomenon of shell buckling.
- The module introduces the students to the analysis of shells using commercial finite element software including linear elastic, linear plastic, nonlinear elastic and linear buckling analyses. An introduction to the design of shells using EN 1993-1-6 is also given.

2.0 Syllabus

- Membrane theory of thin shells: Cylindrical, conical and spherical shells; Generalisation to other axisymmetric shells.
- Axisymmetric bending theory for cylindrical shells.
- Introduction to buckling of cylindrical shells.
- Introduction to the analysis of shell structures using finite element software and overview of linear elastic, linear plastic, linear buckling and nonlinear buckling analyses.
- Overview of structural design according to EN 1993-1-6.
- Overview of advanced research topics in shells.

3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Understand what is meant by a 'thin' walled assumption for axisymmetric shell structures.
- Apply shell membrane theory to analyse cylindrical, conical and spherical shells under varying load cases.
- Apply axisymmetric bending theory to perform stress analyses of isotropic and orthotropic cylindrical shells.
- Use numerical analysis to perform a series of increasingly sophisticated analyses on different types of shell structures, and to compare the outcomes to previously calculated membrane theory solutions.
- Become familiar with the design philosophy in EN 1993-1-6.

4.0 Teaching methods

The course consists of lectures and supporting tutorials.

5.0 Assessment

The final three weeks of the project consist of an advanced ABAQUS project, carried out in the computer lab. The exam consists of two questions, both mandatory and both carrying equal marks. The split between examination and coursework is 70% / 30%.

6.0 Recommended textbooks

1.0 Aims

- To introduce the students to the most basic principles of design in timber and masonry.
- To enable students to develop an understanding of the very fundamental concepts and design philosophies related to timber and masonry elements and to apply this knowledge to the design of simple conventional structural elements and assemblages.

2.0 Syllabus

This is an introductory module to the design of structures in Timber and Masonry. It is organised in two basic and distinct units.

- Design of Timber Structures:
  - Introduction to the design of timber structures. Structural properties of wood and structural design philosophy.
  - Design of complex beams.
  - Axially loaded members and design to combined bending and axial forces.
  - Design of connections.
  - Fire response and design of wooden structures.
- Design of Masonry Structures:
  - Basic components and mechanical characteristics of masonry.
  - Design of unreinforced masonry walls under gravitational and lateral loading.
  - Simplified design approach for masonry buildings.
  - Analysis of masonry arches.

### 3.0 Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Understand the basics of the structural behaviour and design of timber elements.
- Design simple structural members and conventional connections in timber.
- Understand the behaviour of unreinforced masonry structures.
- Design masonry components and bearing wall buildings.

1.0 **Aims**

- To introduce the students to the fundamental concepts and principles of structural fire safety engineering.

2.0 **Syllabus**

- Fundamentals of conductive, convective and radiative heat transfer.
- Introduction to fire science and fire dynamics – fire growth and spread.
- Mechanical and thermal properties of common construction materials under elevated temperatures.
- Structural behaviour of individual members and systems under thermal loads.
- Introduction to prescriptive fire design according to the Eurocodes.
- Limitation of prescriptive fire design and fire behaviour in large enclosures including travelling fires.
- Introduction to performance-based fire design with FE computational modelling.

3.0  Intended learning outcomes

On successfully completing this course unit, students will be able to:

- Understand the principles of heat transfer within and between structural members and the fire.
- Understand the mechanics of a compartment fire and travelling fire, and their associated thermal loads.
- Understand how common construction materials such as steel, concrete and timber degrade under the action of elevated temperatures.
- Be able to apply principles of fire science and heat transfer to perform simple design calculations using spreadsheet tools.
- Be familiar with using sophisticated numerical tools to undertake performance-based fire safety engineering computations.

4.0  Teaching methods

The module is delivered via a mixture of lectures and tutorials, with some guest lectures delivered by representatives from industry. The final three weeks of the module are comprised of an advanced Finite Element (FE) computational project, carried out in a computer lab.

5.0  Assessment

Assessment via coursework (30%) and written examination (70%).
