Learning and teaching

Module description

Learning outcomes	<p>On completion of this module you will be able to:</p> <ul style="list-style-type: none"> • work cooperatively with teachers, technicians and pupils in a school environment. • plan and teach part or the whole of a science lesson in a school with support from a host teacher • identify an area of your host school's learning and teaching environment to which you can make some improvement and design and carry out a teaching project to implement this. • critically analyse your own and others' teaching sessions, identifying strengths and areas for improvement. • provide verbal and written analysis of your experiences to an audience of peers and academics.
Module content	<p>Prior to starting your placement you will receive information and training on types of school in the UK, guidance on behaviour as a guest in a school environment, including ethical and safe practice and hints and tips on lesson planning and delivery. During the placement most of your own learning will come in the classroom with guidance from the host teacher and an academic guide; this will be bespoke as the exact environment you are in will determine the areas in which you will most benefit from guidance. At Imperial, there will be a support tutorial providing guidance on how to deliver the project and how to maximise the benefits you gain from your time at the school.</p>
Learning and Teaching Approach	<p>You will need to apply to take Communicating Physics and pass a short interview where you are asked to deliver a short teaching session to the panel. The teaching starts here as the panel provide you with feedback on the strengths and areas for improvement via this exercise.</p> <p>On the first day of term 1, the module has a training day with teaching experts both from Imperial and outside the College delivering interactive sessions on teaching tips and best practice, plus former Communicating Physics students sharing their experiences from the year before.</p> <p>Once schools have been allocated, you are assigned an Academic Guide who acts as a personal tutor for the module. They will help you at Imperial with the project and will also come and observe you teach one session at the school and subsequently provide you with rich and detailed guidance as feedback.</p>

Assessment Strategy	<p>Summative assessment for the module comprises four parts:</p> <ol style="list-style-type: none"> 1. A journal of teaching activity, worth 20% completed as a series of diary entries in the student's own time. 2. An end-of-module report (4000-word upper limit) detailing the project you have implemented during your placement, worth 40%. 3. A 10-12-minute presentation on your experience in the classroom, worth 25%. 4. A teacher evaluation, worth 15%. This is completed entirely by the host teacher and requires no administrative input by the student. <p>In addition you must complete a progress questionnaire in week 4 of term 2; this is compulsory to submit but does not count towards the grade.</p>
Feedback	<p>Formative feedback is provided in real time by the host teacher(s) and occasionally other staff in the school - they are very used to seeing people starting out in teaching and able to provide deep insight at each session. In addition, the academic-guide visit will provide you with valuable input. Peer feedback comes from the two timetabled tutorials where sections of the sessions are dedicated to open group discussion on ongoing experiences; in addition, we run an optional-attendance mixer event with past course graduates who share their experiences.</p>
Reading list	<ul style="list-style-type: none"> • Teaching Secondary Physics by David Sang • ASE guide to secondary science education by Martin Hollins
