

**Astrophysics**

Module Code	PHYS96004	FHEQ Level	Level 6
Pre-requisites	None	Co-requisites	None
Primary Department	Physics		
Module Leader	Prof Andrew Jaffe and Dr James Owen		
Additional Teaching Departments	None		
Teaching Staff	Prof Andrew Jaffe + Dr James Owen + Associate + Associate		
Programmes on which the Module is delivered			Core/Elective
All UG Physics programmes (F300, F303, F309, F325, F390, F3W3)			Elective
Learning Outcomes	<p>On completing the Astrophysics course, students will:</p> <ul style="list-style-type: none"> <li>• Be able to apply physical concepts with which they are already familiar (mechanics, thermodynamics, quantum mechanics) to explain the formation, existence and appearance of astronomical objects.</li> <li>• Know the important forces, processes and physical scales associated with the different types of astronomical objects listed below.</li> <li>• Be able to connect these phenomena with observations.</li> </ul>		
Description of Content	<p>Star Formation</p> <ul style="list-style-type: none"> <li>• why stars form out of interstellar gas</li> <li>• Jeans instability and the Jeans swindle</li> </ul> <p>Compact objects</p> <ul style="list-style-type: none"> <li>• the equation of state for degenerate gases</li> <li>• giant planets, brown dwarfs and their formation</li> <li>• end stages of stellar evolution: white dwarfs, neutron stars and black holes</li> </ul> <p>Interstellar medium</p> <ul style="list-style-type: none"> <li>• dust</li> <li>• optically thin radiative transfer</li> <li>• diffuse interstellar clouds and the formation of absorption lines</li> <li>• ionised nebulae and the formation of emission lines</li> </ul> <p>Galaxies</p> <ul style="list-style-type: none"> <li>• disk galaxies and rotation curves</li> <li>• evidence for dark matter (or alternative gravity theories)</li> <li>• observations of the Milky Way's rotation</li> <li>• central super-massive black holes</li> </ul> <p>Black holes</p> <ul style="list-style-type: none"> <li>• basic physics of light and particles near the event horizon</li> </ul> <p>Quasars</p> <ul style="list-style-type: none"> <li>• accretion disks around black holes</li> <li>• Eddington limit and efficiency</li> <li>• quasars in the early universe</li> </ul> <p>Gravitational Lensing</p> <ul style="list-style-type: none"> <li>• Newtonian deflection calculation and relativistic correction</li> </ul>		

	<ul style="list-style-type: none"> <li>• lens equation and magnification</li> <li>• multiple images, microlensing and arcs/rings</li> </ul>		
Assessment		Assessment Type	Weighting
Written exam		Exam	100%
Learning & Teaching Hours	Independent Study Hours	Placement Hours	Total Hours
47	103	0	150
ECTS Credit	6	CATS Credit	12
Date of introduction	October 2016	Date of Last Revision	May 2020
