Schools Science Competition

2019

Global Goals- What could you do to change the world?

The competition is free to enter and is open to teams of pupils from secondary schools, or home-schooled teams.

This year's theme focuses on the UN's Global Goals for Sustainable Development. Teams are asked to select a specific goal and to come up with a new and innovative scientific solution in response to this.

To enter, teams must create a 5 minute film that: briefly outlines the goal they have selected; describes their innovative solution; explains the science behind the idea; and illustrates how their idea would address the goal.

The best teams will be invited to present their idea at a showcase event at Imperial College in front of a live audience and a panel of VIP judges.
