Clinical Innovation and Entrepreneurship PROFESSOR ALISON METCALFE

OVERVIEW

- Moving beyond research: The importance of innovation and entrepreneurship.
- Clinical academic roles in creating the culture for innovation and entrepreneurship.
 - General discussion in how we facilitate innovation and entrepreneurship.

Why do we need an innovation and entrepreneurial approach?

Healthcare Workforce
Climate Change
Ageing Population

Cyber-attacks
Geographic migration
Food Security
Social and digital media influences

Antibiotic resistance
Pandemics

War and civil unrest

Mineral Scarcity

Economic decline / inequality

Extremism & Terrorism

Risks from Artificial Intelligence

Digital
Technology
&
AI

Bioinformatics

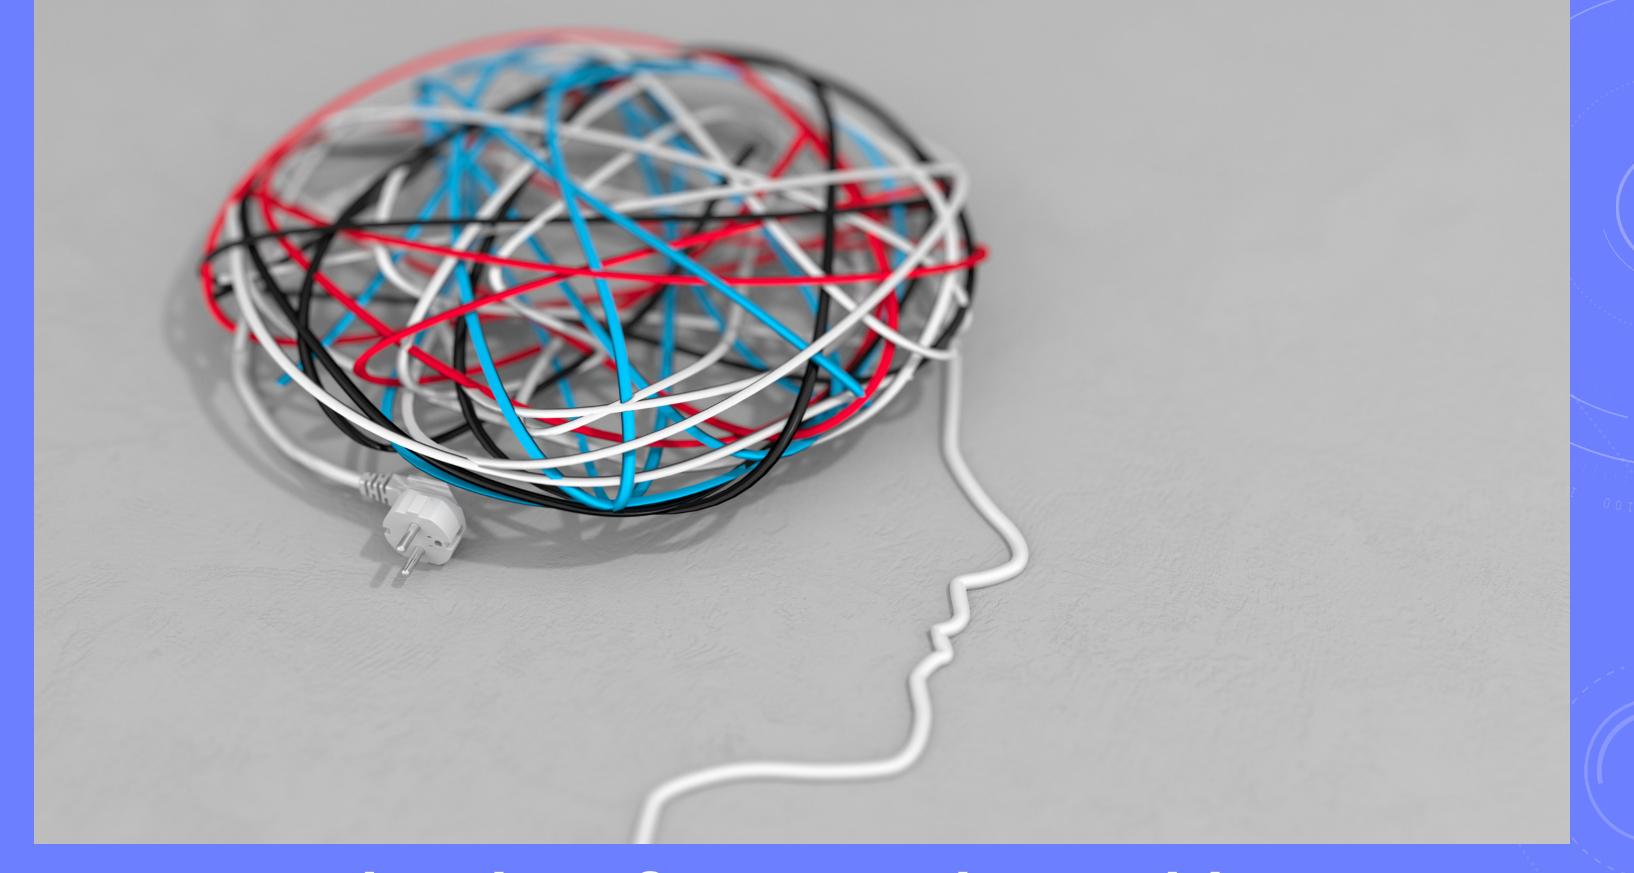

Personalised medicine / Genomics

Relentless focus on the problem Problem as defined by clients / patients

Drives collaboration, sharing and learning.

Needs to be nurtured and encouraged to assist patients and colleagues in coping with change and embrace transformation.

Move beyond research:

Research as the tool not the output

Leadership:

Nurture and create the context and environment for a growth mindset to flourish

Summary

To finalise: I think we have to find ways of researching more rapidly in healthcare and clinical practice – make it part of the whole consultation process so that we can learn and understand the problems we are solving much more quickly and efficiently.

This requires us to have new mechanisms of research governance including research ethics and also a different approach to leadership and collaboration in healthcare.
