BSc in Medical Sciences with Humanities, Philosophy and Law

‘The practice of medicine is an art based on science.’

William Osler (1849–1919)

Welcome to Imperial College London’s innovative intercalated BSc in Humanities, Philosophy and Law.

This guide will give you an idea of what to expect if you are accepted for a place on this BSc. Please note, this is indicative content and potentially subject to change. Check the website for updates and details of entry requirements:

https://www.imperial.ac.uk/medicine/study/undergraduate/intercalated-bsc-programme/humanities-philosophy-and-law/
**What can you expect to learn?**

This BSc ranges widely across disciplines and time periods. It offers you a critical framework in which to appraise medical knowledge and practice through the lens of the humanities paradigm. The course will develop and hone modes of analytical thinking and bodies of knowledge that complement your medical studies. All students will have the opportunity to experience diverse approaches to scholarship in the medical and health humanities, drawn from law, ethics, philosophy, history, and a wide variety of the creative arts.

Content is focused on three main areas of knowledge: the body, the mind, and death and dying. Within each area, topics are explored from interdisciplinary points of view. Topic areas include anatomy and the science of medicine, the medical gaze, mental health, fallibility, pain, medicine and war, and end of life issues. We emphasise creativity and you will have the opportunity to engage in a practical way with the arts though the guidance of expert practitioners. We take full advantage of our enviable location by including field trips to museums, galleries, and law courts across London.

The modes of teaching and learning are designed to suit the content with an appreciation of how context also affects learning. Therefore, there is an emphasis on active and experiential learning in settings in which you can make best use of face-to-face activities with teachers and your fellow students. Role modelling is an important aspect here: guest lectures and workshops facilitated by experts will inspire you and provide memorable learning experiences that facilitate reflective learning, and personal and professional development.

**How is the course structured?**

The taught component of the course (4 months) consists of sessions in which you will be taught by a variety of experts across a range of disciplines working at the intersections of medicine and the humanities. After every three-week block of teaching, there is a week devoted to self-directed learning during which you will work on individual and group tasks. In contrast with other intercalating BScs
offered at Imperial, for this course, the taught and self-directed components are interleaved to allow you to progress your group work steadily over time rather than in a single, concentrated block. The final component of the course (4 months) will be project work, where you will choose your own topic to develop for focused, high-level study, under the guidance of a project co-ordinator and supervisor. The project is supported by a series of skills workshops and weekly progress meetings.

How is the course assessed?

This is indicative information. Assignments and their weightings will be confirmed at the start of the course.

The taught component is assessed by essays in philosophy and in law. You will also create a podcast that interprets a museum object for a lay audience, and produce a narrative in a visual medium that tackles the representation of a pertinent issue.

The self-directed component is assessed through a clinical case study which consists of analysis of patients’ stories published on the website CareOpinion.org.uk. There is also a group poster presentation exploring historical representations in culture of a mental health condition.

The project involves planning and carrying out supervised research resulting in a project write-up. You will choose a topic and develop a research question. You will be expected to make an art object as part of your method, which you will have an opportunity to show as part of a specially curated exhibition. The project is assessed through a written report and an oral presentation that includes reflecting on your research journey.

Meet the team

Mr Greg Artus teaches philosophy at Imperial College, covering areas such as epistemology, philosophy of mind, research ethics, and philosophy of medicine. His research interests also include machine ethics, and the works of both Wittgenstein and Heidegger.

Ms Giskin Day is a Principal Teaching Fellow at Imperial. She is a National Teaching Fellow and a recipient of the Imperial President’s Medal for Outstanding Contribution to Teaching Excellence. Her specialism is creativity in medical education, and her research is on the role of gratitude in healthcare.

Dr Wing May Kong is a Consultant Endocrinologist and Honorary Senior Lecturer in Endocrinology and Ethics at Imperial College. She is also a Fellow of the Royal College of Physicians. Her areas of expertise include medical ethics and law, diabetes, and the diabetic foot.

Miss Carly Line is Programme Administrator for the BSc in Humanities, Philosophy and Law.

Dr Mike Osborn is a consultant Histopathologist based at St Marys Hospital in London. He is President of the Royal College of Pathologists and an honorary senior lecturer at Imperial College London. His specialist areas are gastrointestinal pathology and non-forensic autopsy.

Dr Jennifer Wallis is a Lecturer in the History of Science and Medicine, and Medical Humanities Teaching Fellow, at Imperial College. She specialises in the history of psychiatry and the body, and is an active researcher and author in the history of science, technology, and medicine.

Questions?

To be put in touch with former students or if you have any queries about applying, please contact Miss Carly Line (c.line@imperial.ac.uk). For questions about course content and pedagogy, please contact the course lead, Ms Giskin Day (giskin.day@imperial.ac.uk).
