

CONTENTS

EXECUTIVE SUMMARY

1.	INTRODUCTION	1
2.	GENERAL MATERIALS AND METHODS	4
2.1	Quantitative waste diversion assessment	4
2.1.1	Experimental design and rationale	4
2.1.2	Questionnaire survey	4
2.1.3	Promotional support methods	5
2.1.4	Automatic weighing system	6
2.1.5	Software development for the manipulation of weight data	7
2.2	Controlled home composting investigation	8
2.2.1	Experimental design and installation	8
2.2.2	Waste input materials	10
2.2.3	Mass balance analysis	11
2.2.4	Sample preparation and laboratory analyses	12
2.2.5	Composting process monitoring	12
2.2.5.1	Temperature investigations	12
2.2.5.2	Gas investigations	12
2.3	Biodegradation of packaging waste in compost bins	13
3.	QUANTITATIVE WASTE DIVERSION ASSESSMENT	16
3.1	Automated measurement of residual household waste	16
3.2	Waste compositional analysis	19
3.2.1	Summer results	19
3.2.1.1	General aspects and data presentation	19
3.2.1.2	Putrescible materials	19
3.2.1.3	Recyclable materials	22
3.2.1.4	Materials not accepted for recycling by the RBC KC scheme	23
3.2.2	Autumn results	23
3.2.2.1	Putrescible materials	26
3.2.2.2	Recyclable materials	26
3.2.2.3	Materials not accepted for recycling by the RBC KC scheme	26
3.3	Discussion	26
3.3.1	Comparison with national and regional compositional analysis data	26
3.3.2	Impact of home composting and kerbside collection on the amount and composition of residual household waste	28
4.	MASS BALANCE ANALYSIS OF HOME COMPOSTING	30
4.1	Waste input materials to home compost bins	30
4.2	Mass balance results	30
5.	BIOLOGICAL PROCESS MONITORING IN HOME COMPOST BINS	46
5.1	Temperature	46
5.1.1	Manual temperature monitoring	46
5.1.2	Continuous automatic temperature monitoring	47
5.1.3	Temperature profiles in compost bins	48
5.2	Gaseous phase investigations	48
6.	BIODEGRADABILITY OF PACKAGING WASTE	58
6.1	Literature review	58
6.1.1	Introduction	58
6.1.2	Paper and cardboard packaging biodegradation	59
6.1.3	Coated paper and cardboard	63
6.1.4	Biodegradable plastic packaging	64
6.1.5	Compostability of starch-based biodegradable polymers	65
6.2	Experimental biodegradation results	66

7.	CONCLUSIONS AND RECOMMENDATIONS	70
7.1	Significance of research	70
7.2	Automated measurement of residual household waste	70
7.3	Waste compositional analysis	71
7.4	Overall impact of home composting on the diversion of biodegradable waste from landfill disposal	72
7.5	Waste inputs and composting process monitoring	72
7.6	Biodegradation of packaging materials	74
7.7	Recommendations	74
8.	REFERENCES	76
	APPENDICES	90
APPENDIX I	Home Composting and Waste Management Questionnaires	90
APPENDIX II	Background to Waste Management in Runnymede Borough Council (RBC)	102
APPENDIX III	Home Composting Leaflet	106
APPENDIX IV	Procedure for Fitting Microchips to Wheeled Bins	110
APPENDIX V	Home Composting Database	112
APPENDIX VI	Waste Compositional Analysis	115
APPENDIX VII	Literature Review	123
