## External Reference

- **Relevant QAA Benchmark Statement(s) and/or other external reference points**: Master's award in Engineering
- **FHEQ Level**: Level 7
- **EHEA Level**: 2nd Cycle

## External Accreditor(s) (if applicable)

- **External Accreditor 1**: Royal Aeronautical Society
  - Accreditation received: 2020
  - Accreditation renewal: 2022

## Collaborative Provision

- **Collaborative partner**: N/A
- **Collaboration type**: N/A
- **Agreement effective date**: N/A
- **Agreement expiry date**: N/A

## Specification Details

- **Programme Lead**: Prof. Sergei Chernyshenko
- **Student cohorts covered by specification**: 2021-22 entry
Programme Overview

This advanced taught programme covers the major aspects of computational and theoretical fluid dynamics in application to aeronautical engineering, with a high-level of applicability to non-aeronautical disciplines as well. The programme equips the graduates with a fundamental understanding of the programme material and the skills needed to apply their theoretical knowledge to complex practical problems. The distinguished feature of the programme is that it ensures that you will have the ability to solve complex problems numerically, as opposed to simply using ‘black box’ commercial codes. As a result, you will be able to write and develop, rather than simply use, commercial packages. The second distinguishing feature is that the programme provides not only enhanced engineering training, but also encourages and provides opportunities for conversion to an advanced engineering discipline for graduates from disciplines such as Mathematics and Physics.

The degree is assessed by written examination, associated coursework, and a substantial individual research project. It may be possible for projects to be carried out in industry. The normal duration of the programme is one year full-time.

The taught modules are confined to the Autumn and Spring terms, with the associated examinations held in two stages; the first examination session is in the first two weeks of the Spring term, for modules taught in the preceding Autumn term. The second examination session takes place in the first two weeks of the Summer term for modules taught in the preceding Spring term.

1. Learning Outcomes

By the end of the MSc programme, you will be able to:

1. Apply the comprehensive knowledge and understanding of fundamental concepts and physical principles underlying CFD and structural analysis;
2. Evaluate and manipulate the relevant mathematics underpinning aeronautical engineering and associated computational methods;
3. Apply numerical analysis, programming and computational methods.
4. Critically evaluate advanced analytical concepts;
5. Apply programming and identifying solution strategies;
6. Plan, conduct and report on a programme of original research.
7. Write programs in a standard programming language.
8. Communicate effectively through report writing and data presentation;
9. Present results of individual research project in a lecture to staff and students;
10. Work effectively at an advanced level, to show independence and to manage time;
11. Incorporate an awareness of the environmental, economic and social impact in the design of current and emerging technologies

On completion of the PG Certificate, you will be able to:

1. Apply the comprehensive knowledge and understanding of the scientific, mathematical and computational principles, methods and models relevant to computational fluid dynamics;
2. Evaluate the current and developing (future) methods and technologies in, and relevant to, the field of computational fluid dynamics.

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial College degree programme. The Graduate Attributes are available at: www.imperial.ac.uk/students/academic-support/graduate-attributes

Entry Requirements

Academic Requirement
At least a 2.1 (first strongly preferred) UK Bachelor’s Degree with Honours or equivalent in engineering, mathematics, or physics or computing.
Non-academic Requirements

None

English Language Requirement

Standard requirement (PG)
IELTS score of 6.5 overall (minimum 6.0 in all elements)
Please check for other Accepted English Qualifications

Admissions Test/Interview

N/A

The programme’s competency standards documents can be found at: TBA

Learning & Teaching Approach

Learning and Teaching Delivery Methods

You will be given access to optional pre-sessional revision modules which will consist of lecture recordings that you can work through in your own time, covering the following topics:

- Revision Stress Analysis
- Introduction to Programming
- Introductory Mathematics
- Control Theory
- Introduction to Compressible Flow
- Aircraft Performance and Flight Mechanics
- Introduction to Fluid Dynamics

These revision lectures will not be assessed and therefore do not count for credit. Formative, self-assessment (e.g. tutorial problem sheets with model solutions supplied) will be provided to guide you through these modules.

You will be introduced to core knowledge primarily through large class sessions, ranging in format from traditional lectures to more active learning sessions, where you are required to self-study assigned materials ahead of the session and build on that knowledge in subsequent reinforcement and guided problem-solving sessions.

You will also be expected to spend significant further time (approximately 3-4 hours for every timetabled contact hour) working independently and with peers, reviewing lecture notes, lecture video recordings, books, journal papers, e-learning materials and solving problem sets.

You will also work under the guidance and supervision of a member of the academic staff to complete your individual research project.

Professional skills, such as technical report writing and presenting, are cultivated throughout the degree in various individual and group-based coursework.

Overall Workload

Your overall workload consists of face-to-face sessions and independent learning. While your actual contact hours may vary according to the optional modules you choose to study, the following gives an indication of how much time you will need to allocate to different activities at each level of the programme. At Imperial College London, each ECTS credit taken equates to an expected total study time of 25 hours. Therefore, the expected total study time is 2,250 hours per year for an average student.

The Department expects you to allocate approximately 4 hours in self-study for every hour spent in lectures for a typical lecture-based module.

The pattern of work is greatly dependent on your selected elective modules, however on average you can expect to spend about 216 hours in lectures and tutorials with a further 909 hours, over the first two terms, being devoted to independent study. You will also be expected to spend 1,125 hours on self-directed research work for your Major Individual Research Project, spread out over all three terms (but full time from May onwards).
Assessment Strategy

Assessment Methods

The Department aims to employ assessment both to test your achievement of module objectives, referred to as summative assessment, and as a method of enhancing learning, developing skills and applying knowledge through assessment, referred to as formative assessment.

A variety of formative and summative assessment methods are utilised in this programme. Written examinations are utilised for modules where theoretical knowledge and its application within a disciplinary setting is introduced. In addition to a final summative assessment, such modules will typically offer opportunities for you and your instructors to assess your level of understanding and progress by completing in-class or online formative progress tests and tutorial classes.

Design and research projects are assessed through a variety of methods such as coursework in the form of:
- Project reports
- Research dissertation
and practical such as:
- Oral presentations
- Viva voce

The exact balance of the summative assessment through the programme depends upon which elective modules are taken, but an indicative breakdown is:

<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coursework</td>
<td>60%</td>
</tr>
<tr>
<td>Exams</td>
<td>30%</td>
</tr>
<tr>
<td>Oral assessment</td>
<td>10%</td>
</tr>
</tbody>
</table>

To achieve a pass in a particular module, candidates must gain a weighted overall mark of 50% or greater.

Academic Feedback Policy

Feedback is an essential part of learning and the Department gives high priority to the timeliness and quality of feedback offered to you on all modules. The primary purpose of feedback is to assist learning and the development of skills, by highlighting strengths and weaknesses on one hand, and by identifying actions for improvement on the other. It is not meant to exclusively provide justification for assessment results. It is important to recognize that: 1) feedback comes in various forms and 2) feedback requires your active engagement.

Feedback will be provided for all assessments carried out as part of this programme. For examinations, a written examiner’s report, commenting and providing quantitative information on the performance of the entire cohort, detailing common mistakes, and highlighting alternate approaches to the published solution, will be made available. For coursework, written feedback will normally be provided within three working weeks of submission. For the research dissertation, feedback will be provided ahead of the next opportunity where said feedback will be of use to you.

All modules will further aim to provide you with the opportunity to receive feedback ahead of any major summative assessment. Such feedback may be provided in the form of in-class progress tests, online self-assessment exercises, tutorial sheets, etc. Where possible, as in the case of in-class tutorial sessions, oral examinations and poster sessions, oral feedback will be provided immediately by tutors or assessors.

You should keep in mind that not all feedback is structured, and important feedback may be obtained from self-reflection on your progress to date, from peers when studying or working together in a team, in dialogue with a lecturer or teacher in or outside of a tutorial, class or laboratory, or by email.

The College’s Policy on Academic Feedback and guidance on issuing provisional marks to students is available at:

Important notice: The Programme Specifications are the result of a large curriculum and pedagogy reform implemented by the Department and supported by the Learning and Teaching Strategy of Imperial College London. The modules, structure and assessments presented in this Programme Specification are correct at time of publication but might change as a result of student and staff feedback and the introduction of new or innovative approaches to teaching and learning. You will be consulted and notified in a timely manner of any changes to this document.
Programme Structure

Year 1 – FHEQ Level 7
Students study all core modules (Group A)
Students need to choose five electives from Group B.

Credit Total: 90

---

1 Core modules are those which serve a fundamental role within the curriculum, and for which achievement of the credits for that module is essential for the achievement of the target award. Core modules must therefore be taken and passed in order to achieve that named award. Compulsory modules are those which are designated as necessary to be taken as part of the programme syllabus. Compulsory modules can be compensated. Elective modules are those which are in the same subject area as the field of study and are offered to students in order to offer an element of choice in the curriculum and from which students are able to select. Elective modules can be compensated.
Progression and Classification

Classification of Postgraduate Taught Awards

Award of a PG Certificate
To qualify for the award of a postgraduate certificate a student must have a minimum of 30 ECTS at Level 7 credits obtained only from the taught modules taken, i.e. excluding the Major Individual Research Project.

Award of an MSc Degree
To qualify for the award of an MSc degree a student must have:

- Accumulated no fewer than 90 ECTS credits at Level 7 of which no more than 10 ECTS credits may be from a Compensated Pass
- Met any specific requirements for an award as outlined in the approved programme specification for that award

The College sets the class of Degree that may be awarded as follows:

1. Distinction: The student has achieved a mark of 70.0% or greater for their taught modules’ assessment aggregate AND a mark of 70.0% or greater for their project. Note that distinction is awarded at the discretion of the Exam Board.

2. Merit: The student has achieved a mark of 60.0% or greater for their taught modules’ assessment aggregate AND a mark of 60.0% or greater for their project but either the exam aggregate or the project mark or both are below 70.0%

3. Pass: The student has achieved a mark of 50.0% or greater for their taught modules’ assessment aggregate AND a mark of 50.0% or greater for their project but either the exam aggregate or the project mark or both are below 60.0%

Programme Specific Regulations

As an accredited degree, students on this MSc programme are subject to the standards set by the Engineering Council in relation to compensation. A maximum of 10 ECTS credits can be compensated across the programme.

The College’s Quality & Enhancement Framework is available at: www.imperial.ac.uk/registry/proceduresandregulations/qualityassurance

The College’s Academic and Examination Regulations can be found at: www.imperial.ac.uk/about/governance/academic-governance/regulations

Imperial College is an independent corporation whose legal status derives from a Royal Charter granted under Letters Patent in 1907. In 2007 a Supplemental Charter and Statutes was granted by HM Queen Elizabeth II. This Supplemental Charter, which came into force on the date of the College’s Centenary, 8th July 2007, established the College as a University with the name and style of “The Imperial College of Science, Technology and Medicine”.

www.imperial.ac.uk/admin-services/secretariat/college-governance/charters/

Imperial College London is regulated by the Office for Students (OfS)
www.officeforstudents.org.uk/advice-and-guidance/the-register/

This document provides a definitive record of the main features of the programme and the learning outcomes that a typical student may reasonably be expected to achieve and demonstrate if s/he takes full advantage of the learning opportunities provided. This programme specification is primarily intended as a reference point for prospective and current students, academic and support staff involved in delivering the programme and enabling student development and achievement, for its assessment by internal and external examiners, and in subsequent monitoring and review.
