Programme Information		
Programme Title	Programme Code	HECoS Code
MEng Chemical Engineering	H801	For Registry Use Only

Award	Length of Study	Mode of Study	Entry Point(s)	Total Credits	
				ECTS	CATS
MEng	4 years	Full-Time	Annually in October	240	480
BEng (Honours) – H801C	N/A	N/A	N/A	180	360
BEng (Ordinary) – H804	N/A	N/A	N/A	150	300
DipHE	N/A	N/A	N/A	120	240
CertHE – H801CE	N/A	N/A	N/A	60	120

A student who withdraws before completing the MEng Chemical Engineering programme may be offered the following exit awards at the discretion of the Board of Examiners provided that they have met the ECTS requirements for that award in line with Imperial's Regulations: Certificate in Higher Education in Chemical Engineering (60 ECTS), Diploma in Higher Education in Chemical Engineering (120 ECTS), BEng Chemical Engineering (Ordinary) (150 ECTS) and BEng Chemical Engineering (Hons) (180 ECTS). These exit awards are not accredited.

Date of introduction of programme	October 19
Date of programme specification/revision	February 2025

Programme Overview

The aim of this programme is to graduate students of the highest quality who will demonstrate technical and professional leadership and who will go on to successful careers in industrial and other sectors of the economy.

You will achieve this aim by developing a strong foundation in the fundamental principles of science, mathematics and engineering and use this to build sound practical expertise and engineering judgement. You will study core chemical engineering subjects and will be able to demonstrate your competency in these subjects through the use of the 'mastery' concept. This is a holistic, systems-based approach to problem analysis and solution which ensures that students can apply the essential elements of Chemical Engineering to a high standard. You will also study relevant business and economic subjects as well as acquire a firm understanding of sustainability which is embedded within several modules. This will complement your core competencies resulting in a well-rounded graduate profile.

The programme will use a variety of learning and teaching methods to help you become an independent practitioner and you are expected to contribute to the discussion with academic and technical staff during your lectures, practical work and laboratories.

We aim to encourage interdisciplinary interests and you may find that as you become more aware of the chemical engineering industry, your interests may develop in complementary directions. A significant range of options are, therefore, available in the last two years of the programme which provide the opportunity to explore individual and career preferences. Examples of these options include to study abroad for a year (in English or a foreign language) or choosing elective subjects which range from core chemical engineering subjects to management and humanities options, as well as technical options from across the Faculty of Engineering.

As part of an integrated approach, you will also develop your professional and transferrable skills which include group working, time and project management, problem-solving and competence in oral and written communication. You will also gain a strong awareness of industrial requirements for professional ethics, health and safety. This will broaden your outlook and employability skills.

We aim to graduate students who are adaptable and, therefore, well-suited to careers in both the industrial and service sectors. Upon successful completion of your degree, you will be an industry-ready graduate with notable competencies across a wide range of technical and non-technical subjects.

Year Abroad
The MEng Chemical Engineering with a Year Abroad (H802) programme is a pathway within the MEng Chemical Engineering degree where you will spend your third undergraduate year abroad at one of our partner universities and then return to Imperial for your final year. Further information can be found in the Programme Specification for this programme

Learning Outcomes

Upon successful completion of your MEng Chemical Engineering programme, you will be able to:

Knowledge and Understanding

1. Demonstrate a strong fluency in the fundamental principles of mathematics and science which underpin chemical engineering;
2. Explain the advanced principles and theory of reaction engineering, separations, transfer processes, control systems, process analysis and process design to integrate and apply these to practical engineering situations;
3. Demonstrate an understanding of the ethical, health, safety and sustainability requirements within the process industries;
4. Acquire and develop a broad knowledge base which includes an appreciation of business, humanities and management subjects;

Intellectual Skills

5. Think critically in the context of open-ended problems and develop investigative and modelling strategies to solve them;
6. Demonstrate the skills necessary to plan, conduct and report a programme of independent research or a project of direct and immediate industrial relevance;
7. Exercise engineering judgement and employ advanced diagnostic, modelling and innovative skills in order to optimise the performance of selected chemical engineering systems;

Practical Skills

8. Start-up, operate and shut down safely a pilot-scale process plant;
9. Analyse experimental results using a wide range of computational tools and packages to determine the range of their accuracy, precision, and validity;
10. Plan, execute and experiments for a variety of industrially relevant problems in order to choose optimal solutions and/or deliver set targets;
11. Iteratively design, evaluate and optimise selected chemical engineering systems and processes;

Professional Skills Development

12. Acquire a range of professional skills and proficiencies including effective communication, team-working, time management and leadership;
13. Demonstrate an awareness of the ethical, environmental, economic and social impact of chemical processes;
14. Acquire and develop skills for the purpose of continuous professional development.

The MEng in Chemical Engineering is an accredited degree with the Institution of Chemical Engineers (UK) which meets all academic requirements to achieve chartered status, should you wish to pursue this professional recognition after graduation.

If you withdraw from the MEng Chemical Engineering programme and are offered a BEng Chemical Engineering (Pass) exit award, you will have achieved the following learning outcomes:

Knowledge and Understanding

1. Use and apply the fundamental principles of mathematics and science which underpin chemical engineering;
2. Explain the fundamental principles and theory of reaction engineering, separations, transfer processes, control systems, process analysis and process design and be able to use these to solve selected engineering problems;
3. Demonstrate an understanding of the ethical, health, safety and sustainability requirements within the chemical engineering industry;
4. Acquire an appreciation of business, humanities and management subjects;

Intellectual Skills

5. Think critically to develop strategies to solve practical engineering problems;
6. Demonstrate the skills necessary to plan, conduct and report a programme of guided research or project of direct and immediate industrial relevance;
7. Exercise engineering judgement in order to optimise the performance of selected chemical engineering systems;

Practical Skills

8. Start-up, operate and shut down safely a pilot-scale process plant;

9. Plan and execute experiments for selected industrially relevant problems and analyse the experimental results using selected computational tools and packages to determine the range of their accuracy and validity;

Professional Skills Development

10. Communicate effectively through oral presentations and written reports using a wide range of ICT packages;
11. Work effectively in a team to achieve an objective under imposed time and resource constraints, with due respect and recognition to contribution from other members of the team;
12. Demonstrate effective time-management and leadership skills.

The BEng Chemical Engineering is not an accredited degree and is only awarded at the discretion of the Board of Examiners in line with Imperial's Regulations. Should you wish to pursue recognition as a professional chemical engineer after withdrawing, a full review of your academic formation and possibly further study will be necessary to support your application for professional registration.

If you withdraw from the MEng Chemical Engineering programme and are offered a Diploma in Higher Education in Chemical Engineering exit award, you will have achieved the following learning outcomes:

Knowledge and Understanding

1. Use and apply the fundamental principles of mathematics and science which underpin chemical engineering;
2. Explain the basic principles of reaction engineering, separations, transfer processes and process analysis and use these to solve foundational engineering problems;
3. Demonstrate a basic understanding of the ethical and sustainability requirements within the chemical engineering industry;

Intellectual Skills

4. Analyse and evaluate the performance of selected chemical engineering systems and be able to make recommendations to optimise their performance;

Practical Skills

5. Start-up, operate and shut down safely a pilot-scale process plant;
6. Plan and execute experiments for foundational industrial problems and analyse the experimental results to determine the range of their accuracy and validity;

Professional Skills Development

7. Communicate effectively through oral presentations and written reports using ICT packages;
8. Work effectively in a team and demonstrate effective time-management to achieve an objective under imposed resource constraints;

The Diploma in Higher Education in Chemical Engineering is not an accredited programme and is only awarded at the discretion of the Board of Examiners in line with Imperial's Regulations. Should you wish to pursue recognition as a professional chemical engineer after withdrawing, a full review of your academic formation and further academic study will be necessary to support your application for professional registration.

If you withdraw from the MEng Chemical Engineering programme and are offered a Certificate in Higher Education in Chemical Engineering exit award, you will have achieved the following learning outcomes:

Knowledge and Understanding

1. Use and apply the fundamental principles of mathematics and science which underpin chemical engineering;
2. Explain the basic principles of separations, transfer processes and process analysis and use these to solve foundational engineering problems;
3. Demonstrate a basic understanding of the sustainability requirements within the chemical engineering industry;

Intellectual Skills

4. Analyse and evaluate the performance of selected chemical engineering systems;

Practical Skills

5. Execute basic experiments and analyse the experimental results to determine their accuracy and validity;

Professional Skills Development

6. Communicate effectively through written reports using ICT packages;
7. Work effectively in a team and demonstrate effective time-management skills.

The Certificate in Higher Education in Chemical Engineering is not an accredited programme and is only awarded at the discretion of the Board of Examiners in line with Imperial's Regulations. Should you wish to pursue recognition as a professional chemical engineer after withdrawing, a full review of your academic formation and further academic study will be necessary to support your application for professional registration.

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial degree programme. The Graduate Attributes are available at: www.imperial.ac.uk/about/education/our-graduates/

Entry Requirements	
Academic Requirement	**A Level Requirements:** Minimum A*A*A A* in Mathematics, A* in Chemistry, Relevant subjects for the remaining A-level include: Physics, Biology, Further Mathematics, and Economics **IB Requirements:** Minimum 39 overall (or a comparable qualification recognised by the university) 7 in Mathematics at higher level, 6 in Chemistry at higher level, 6 in Physics or Biology at higher level – Economics may also be considered (or a comparable qualification recognised by the university). For further information on entry requirements, please go to www.imperial.ac.uk/study/apply/undergraduate/entry-requirements/
Non-academic Requirements	N/A
English Language Requirement	Standard requirement Please check for other Accepted English Qualifications
Admissions Test/Interview	All applicants are required to take the Engineering and Science Admissions Test (ESAT) in either October or January. You may be interviewed, either face-to-face or by online interview.

The programme's competency standards documents are available from the department.

Learning & Teaching Approach

Our Chemical Engineering programme aims to offer an integrated approach to learning which will allow you to make meaningful connections between the different chemical engineering areas. This will create a more profound and holistic understanding of chemical engineering as you engage in purposeful and relevant learning. Our approach uses a variety of independent study as well as taught, practical and design-based strategies to achieve the programme's learning outcomes. Further learning support is also available from the Centre for Academic English (www.imperial.ac.uk/academic-english) and the Library (www.imperial.ac.uk/admin-services/library/learning-support/).

Teaching and practical work

You will be taught using a combination of lectures, tutorials, guest lectures and presentations. Throughout your programme, you will also build your practical expertise through lab-based modules. The first year Foundation Lab teaches practical skills through illustrating relevant engineering scenarios. The second year Knowledge

Laboratory module focuses on solving practical engineering problems through using unit operations and relates the theoretical knowledge gained through lectures to practical results. The third year Discovery Laboratory consists of open-ended investigative experiments requiring searching for information, objective analysis, experimental planning, and scientific conclusion. All modules develop laboratory skills within a culture of safe working. You will also be taught the fundamentals of chemical plant operation and learn how to control and operate a state-of-the art pilot plant for a variety of practical engineering situations.

Design-based projects
Design-based projects are used throughout your programme to integrate your chemical engineering knowledge with problem-solving and team-working skills. You will design reactors, process control systems, whole-plant flow sheets and mechanical systems. These are team-based activities which will require you to work effectively with other team members as you plan, organise, prioritise and produce deliverables.

Professional and transferable skills
Throughout your course, you will also attend workshops designed to develop transferable skills (e.g. career development, team building, ethical behaviour, and report-writing and presentation skills). These will be complemented by options to develop individual interdisciplinary interests, and you may choose to study abroad for a year (in English or a foreign language) or choose electives that focus on different disciplines such as humanities, business and management studies and other STEMM subjects and other technical options from across the university.

Independent learning
Students are expected to spend significant time on independent study outside of face to face contact time. There is a prerequisite amount of independent study hours for each module which can be augmented based on your needs. This time will typically be used to access allocated reading material, review lecture notes and recordings, work on individual and group assignments and coursework as well as to revise for in-class tests and examinations. It is essential that you manage your time effectively to meet your learning needs.

Overall Workload
Your overall workload consists of face-to-face sessions and independent learning. While your actual contact hours may vary according to the optional modules you choose to study, the following gives an indication of how much time you will need to allocate to different activities at each level of the programme. At Imperial, each ECTS credit taken equates to an indicative total study time of 25 hours. Therefore, the indicative total study time is 1500 hours per year. As these are indicative study times, you may need to make reasonable adjustments to these suggested times to account for your individual learning style.

Typically, in the first 3 years of your programme, you will spend around 25% of your time in lecturers, tutorials and other time-tabled activities (around 380 hours). The remaining 75% (around 1120 hours) will be used for independent study.

In your fourth year, you will spend about 10% of your time in lectures and tutorials (about 150 hours) and approximately 15% of your time undertaking team activities as part of your final design project (about 250 hours). The rest of your time will be spent in independent study.

Assessment Strategy

Assessment Methods

Both summative and formative assessments will be used to demonstrate that you have met the intended learning outcomes for each module leading to an overall fulfilment of the programme learning outcomes.

The goal of summative assessment is to evaluate student learning at the end of an instructional unit, project, module, term or academic year. A variety of summative assessment types will be used throughout your degree programme. Typical examples include final examinations, in-class tests, coursework, laboratory experiments as well as individual and group reports and presentations. Summative assessments are weighted components which count towards your final mark.

The goal of formative assessment is to monitor student learning to provide ongoing feedback that can be used by students to improve their learning and by academic staff to improve their teaching. These assessments are non-weighted elements which are crucial to your learning development as they lead to a better summative performance. Formative assessments help you to identify your strengths and weaknesses as you progress through your modules

which can help you to close knowledge gaps and further develop specific areas. Typical examples of formative assessments used include problem sheets, individual and group presentations, drafts of project reports and laboratory experiments, pilot-plant and practical work.

Some assessments in your programme are also non-weighted (called pass/fail elements) where you will need to pass these assessments in order to progress. These kinds of assessments will clearly be identified at the start of your modules.

Self-reflection is also an important part of the feedback and assessment process and you should actively engage with the feedback from your assessments to evaluate your performance. This will help you to improve and further build your competencies.

Based on a typical pathway through the programme, the percentages below provide a breakdown of how you will be assessed in terms of coursework, practical work and examinable components:

	Year 1	Year 2	Year 3	Year 4
Coursework	20%	30%	40%	45%
Practical	10%	7.5%	5%	5%
Examination	70%	62.5%	55%	50%

Academic Feedback Policy

The department strives to provide timely and rich feedback to students on all coursework. For standard pieces of coursework the department adheres to Imperial's 10 working-day rule. Larger coursework items (e.g. design or research projects) have longer turn-around times that are published.

Solutions to the exam questions are provided on Blackboard after exam results have been ratified at the Board of Examiners' meeting. Students who have failed and are invited to retake the exam in accordance with the regulations are provided with individual feedback.

Imperial's Policy on Academic Feedback and guidance on issuing provisional marks to students is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Re-sit Policy

Imperial's Policy on Re-sits is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Mitigating Circumstances Policy

Imperial's Policy on Mitigating Circumstances is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Additional Programme Costs

There are additional costs associated with the MEng Chemical Engineering with a Year Abroad which are not included in your tuition fees and are only applicable to your year abroad.

Description	Mandatory/Optional	Approximate cost
Travel costs and living expenses (including accommodation)	Mandatory	Varies*
Travel and health insurance	Mandatory	Varies*

*please speak with your Exchange Coordinator for more information

Important notice: The Programme Specifications are the result of a large curriculum and pedagogy reform implemented by the Department and supported by the Learning and Teaching Strategy of Imperial College

London. The modules, structure and assessments presented in this Programme Specification are correct at time of publication but might change as a result of student and staff feedback and the introduction of new or innovative approaches to teaching and learning. You will be consulted and notified in a timely manner of any changes to this document.

Programme Structure[1]					
Year 1 – FHEQ Level 4 **You will study all core and compulsory modules.**					
Code	Module Title	Core/ Compulsory/ Elective	Group	Term	Credits
CENG40001	Mastery 1	Compulsory	N/A	Autumn-Spring	5.0
CENG40002	Process Analysis	Core	N/A	Autumn	5.0
CENG40003	Chemical Engineering Practice 1	Core	N/A	Autumn-Spring	10.0
CENG40004	Transfer Processes 1	Core	N/A	Autumn-Spring	7.5
CENG40005	Thermodynamics 1	Core	N/A	Autumn-Spring	5.0
CENG40009	Separation Processes 1	Core	N/A	Spring	5.0
CENG40006	Chemistry 1	Compulsory	N/A	Spring	7.5
CENG40007	Mathematics Fundamentals	Compulsory	N/A	Autumn-Spring	10.0
CENG40008	Physical Chemistry	Compulsory	N/A	Autumn	5.0
				Credit Total	60
Year 2 - FHEQ Level 5 **You will study all core and compulsory modules.**					
Code	Module Title	Core/ Compulsory/ Elective	Group	Term	Credits
CENG50001	Mastery 2	Compulsory	N/A	Autumn-Spring	5.0
CENG50002	Transfer Processes 2	Core	N/A	Spring	5.0
CENG50003	Chemical Engineering Practice 2	Core	N/A	Autumn-Spring	10.0
CENG50004	Reaction Engineering 1	Core	N/A	Autumn-Spring	7.5
CENG50005	Thermodynamics 2	Core	N/A	Autumn	5.0

[1] **Core** modules are those which serve a fundamental role within the curriculum, and for which achievement of the credits for that module is essential for the achievement of the target award. Core modules must therefore be taken and passed in order to achieve that named award. **Compulsory** modules are those which are designated as necessary to be taken as part of the programme syllabus. Compulsory modules can be compensated. **Elective** modules are those which are in the same subject area as the field of study and are offered to students in order to offer an element of choice in the curriculum and from which students are able to select. Elective modules can be compensated.

CENG50006	Process Dynamics and Control	Core	N/A	Autumn-Spring	5.0
CENG50009	Separation Processes 2	Core	N/A	Spring	5.0
CENG50007	Engineering Mathematics	Compulsory	N/A	Autumn-Spring	10.0
CENG50008	Chemistry 2	Compulsory	N/A	Spring	7.5
				Credit Total	60

Year 3 - FHEQ Level 6
You will study all core and compulsory modules and also choose ONE elective at Level 6.

Code	Module Title	Core/ Compulsory/ Elective	Group	Term	Credits
CENG60001	Mastery 3	Compulsory	N/A	Spring	5.0
CENG60002	Reaction Engineering 2	Core	N/A	Autumn	5.0
CENG60003	Particle Engineering	Core	N/A	Spring	5.0
CENG60004	Process Design	Core	N/A	Spring	10.0
CENG60005	Safety and Loss Prevention	Core	N/A	Autumn	5.0
CENG60006	Environmental Engineering	Core	N/A	Spring	5.0
CENG60007	Chemical Engineering Practice 3	Core	N/A	Autumn	10.0
CENG60008	Process Optimisation	Compulsory	N/A	Autumn	5.0
	I-Explore	Compulsory	N/A	Autumn or Spring	5.0
CENG60009	Advanced Fluid Mechanics	Elective*	N/A	Spring	5.0
CENG60013	Nuclear Chemical Engineering	Elective*	N/A	Spring	5.0
CENG60014	Process Heat Transfer	Elective*	N/A	Spring	5.0
CENG60017	Sustainable Energy Technologies	Elective*	N/A	Spring	5.0
CENG60020	Biochemical Sensors	Elective*	N/A	Spring	5.0
CENG60021	Introduction to Numerical Methods for Chemical Engineers (not running in 2025-26)	Elective*	N/A	Autumn	5.0
CENG60022	Entrepreneurship in Chemical Engineering	Elective*	N/A	Spring	5.0
				Credit Total	60

*). Please note that electives may not run due to low student numbers and lecturer availability.

Year 4 - FHEQ Level 7 **You will study all core modules and choose SIX electives at Level 7.**					
Code	Module Title	Core/ Elective	Group	Term	Credits
CENG70001	Chemical Engineering Practice 4	Core	N/A	Autumn-Spring	30.0
CENG70002	Advanced Process Operations	Elective*	N/A	Spring	5.0
CENG70003	Advanced Process Optimisation	Elective*	N/A	Autumn	5.0
CENG70004	Dynamic Behaviour of Process Systems	Elective*	N/A	Autumn	5.0
CENG70005	Dynamical Systems in Chemical Engineering	Elective*	N/A	Autumn	5.0
CENG70006	Colloids and Interface Science	Elective*	N/A	Spring	5.0
CENG70008	Modelling of Biological Systems	Elective*	N/A	Spring	5.0
CENG70009	Product Characterisation	Elective*	N/A	Spring	5.0
CENG70010	Advanced Bioprocess Engineering	Elective*	N/A	Autumn	5.0
CENG70011	Transport Processes in Biological Systems (not running in 2025-26)	Elective*	N/A	Autumn	5.0
CENG70012	Molecular Modelling of Fluids (not running in 2025-26)	Elective*	N/A	Autumn	5.0
CENG70013	Applied Spectroscopy (not running in 2025-26)	Elective*	N/A	Spring	5.0
CENG70027	Biochemical Engineering	Elective*	N/A	Spring	5.0
CENG70028	Machine Learning for Chemical Engineering	Elective*	N/A	Autumn	5.0
CENG70029	Practical Process Engineering in the Oil and Gas Industry	Elective*	N/A	Autumn	5.0
CENG70035	Carbon Capture and Clean Fossil Fuels	Elective*	N/A	Autumn	5.0
CENG70036	Membrane Science and Membrane Separation Processes	Elective*	N/A	Spring	5.0
				Credit Total	60
* Please note that electives may not run due to low student numbers and lecturer availability.					

Progression and Classification

Progression

In order to progress to the next level of study, you must have passed all modules (equivalent to 60 ECTS) in the current level of study at first attempt, at resit or by a compensated pass.

The overall weighted average for each year must be 40%, including where a module(s) has been compensated, in order for you to progress to the next year of the programme.

Classification

The marks from modules in each year contribute towards the final degree classification.

In order to be considered for an award, you must have achieved the minimum number of credits at the required levels prescribed for that award and met any programme specific requirements as set out in the Programme Specification.

Your classification will be determined through:

i) Aggregate Module marks for all modules
ii) Year Weightings

For this award, Year One is weighted at 7.50%, Year Two is weighted at 20.00%, Year Three is weighted at 36.25% and Year Four is weighted at 36.25%.

The university sets the class of undergraduate degree that may be awarded as follows:

i)	First	70.00% or above for the average weighted module results
ii)	Upper Second	60.00% or above for the average weighted module results
iii)	Lower Second	50.00% or above for the average weighted module results
iv)	Third	40.00% or above for the average weighted module results

Please find the full Academic Regulations at www.imperial.ac.uk/about/governance/academic-governance/regulations/. Please follow the prompts to find the set of regulations relevant to your programme of study.

Programme Specific Regulations

In order to fulfil a part of the IChemE accreditation requirements of your programme, you are expected to pass the HAZOP component of your Year 3 Safety and Loss Prevention module. A hazard and operability study (HAZOP) is a structured and systematic analysis of a process or operation that is used to identify and evaluate risks to persons or equipment.

As an accredited degree, students on this programme are subject to the standards set by the Engineering Council in relation to compensation: a maximum of 15 ECTS credits can be compensated across the entire programme.
