†A BSc exit degree may be awarded to students on an MSci Honours degree, who wish to conclude their studies at the end of their third year. An Honours classification requires the third year meets all requirements for the BSc (Hons).

*The Certificate/Diploma of Higher Education are intermediate awards and are not available for entry. All students must apply to and join a BSc or MSci programme.

Programme Overview

Studying the MSci Chemistry with Spanish for Science programme you will be an active participant engaging with a rigorous modern student-centred curriculum in a dynamic and world-leading chemistry department. This degree allows you to combine your training in chemistry with study of the Spanish language. These language classes, taught in Spanish by the Centre for Languages, Culture and Communication, focus on the use and presentation of written and oral scientific and technical material in Spanish. You will also receive an introduction to the theory and practice of translation, alongside further studies in the history, politics, science and technology of Spanish-speaking countries. You will carry out your final-year research project and optional chemistry modules at one of our partner universities in Spain. Ultimately you will contribute to chemistry research and to advancing the discipline, and you will graduate confident in your ability to take on any challenge in chemistry and beyond.

You will develop a thorough and interconnected understanding of core chemistry through studying fundamental chemistry topics across the sub-disciplines of Inorganic, Organic, Physical, Analytical, Synthetic and Computational chemistry. In years 3 and 4 you will select from a range of chemistry options to follow your own interests in advanced topics and frontiers of the discipline. Through an extensive laboratory programme you will learn to synthesise chemicals and to study chemical systems through experimental measurements and computational models, including building instrumentation and programming. You will design your own experiments, and thereby learn a range of broader research and transferrable skills from finding reliable information, to designing an experimental investigation, and analysing and communicating the results. Your third year will include an introduction to emergent ‘industry 4.0’ approaches and technologies such as rapid prototyping, biohacking and machine learning, and in your final year you will join an academic research group in one of the department’s partner universities to complete an independent research project.

Your core chemistry studies will be complemented by Spanish in years 1, 2 and 3. Extra-curricular opportunities to undertake multidisciplinary study include access to the Advanced Hack Space and Invention Rooms at White City, initiatives such as the faculty’s Make A Difference competition, and summer research projects through the Undergraduate Research Opportunities Programme.

You will learn from a range of teachers: peers, postgraduate students, teaching- and research- focussed academic staff up to professorial level, including world leaders in their fields. You will build collaborative learning relationships with a range of people, and a personal tutor will oversee your personal and intellectual development. Most teaching will be at South Kensington, but travel to the White City campus will be necessary for some activities.

An MSci degree covers more in-depth chemistry study than a BSc degree, including more advanced research-led modules, making them more suited to students who are considering a career in research or who may wish to progress to further study such as a PhD. The degree programme is professionally accredited by the Royal Society of Chemistry, meaning your degree will be recognised around the world as high quality, having academic rigour and meeting the needs of both students and employers. As well as your main Imperial degree, you will also receive the award of the Associateship of the Royal College of Science (ARCS) on completion of this course. Graduates of the chemistry department go on to a range of employments and further study, including PhD study, technical consultancy, research and development, accountancy, marketing, business activities and medical and law-based graduate training.
Learning Outcomes

Chemistry degree programmes have six broad Intended Learning Outcomes. Students will be able to:

1. Apply chemistry knowledge and understanding
2. Use experimentation to find chemical information and create new chemical knowledge and technologies
3. Use reliable sources to find chemical information
4. Analyse and interpret data and solve problems creatively in chemistry and wider contexts
5. Communicate chemistry
6. Demonstrate intellectual and personal development as a university learner and citizen to enable purposeful and responsible engagement with the world

and employ the transferrable skills and core competencies expressed in the Imperial Graduate Attributes

Graduates of the Chemistry with Language for Science programmes will additionally be able to:

- communicate in and comprehend both written and spoken forms of the chosen language in a variety of contexts with special emphasis on the language of science and technology at the relevant level
- distinguish the main trends in the culture(s), history, politics and scientific history of the relevant countries and critically appraise them
- apply thorough research, creativity and originality in a range of communicative environments in the target language
- translate a wide range of texts from and into the target language
- cope with cultural differences, adapt to unknown environments and apply curiosity and an enquiring mind in relation to language learning and to the foreign culture
- adapt in response to feedback to the four specific language skills (reading, writing, speaking, listening), carry out self-reflection on language learning and be self-motivated and an autonomous language learner

Upon completion of a MSci Chemistry degree you will, in addition to the BSc Chemistry learning outcomes (below), be able to:

- **Apply chemistry knowledge and understanding:**
  demonstrate depth of knowledge and comprehensive understanding of their chosen specialism; describe and explain personal opinions on contested issues
- **Use experimentation to find chemical information and create new chemical knowledge and technologies:**
  plan and carry out a substantial open-ended research project including strategic optimisation
- **Use reliable sources to find chemical information:**
  efficiently find information to explore their own interests; critically analyse journal articles and evaluate their contribution to the literature
- **Analyse and interpret data and solve problems creatively in chemistry and wider contexts:**
  define and solve problems in the context of their chosen specialism; identify gaps in current knowledge or data sets and formulate projects to address these
- **Communicate chemistry:**
  communicate and defend their research; explain views on directions of future research in the area
- **Demonstrate intellectual and personal development as a university learner and citizen to enable purposeful and responsible engagement with the world:**
  employ behaviours of a research-led learner; manage their own learning, time and workload and maintain research group relationships over a substantial project; instigate professional relationships; exercise substantial initiative, perseverance and academic accountability; operate in a professional chemistry environment

Upon completion of a BSc Chemistry degree you will, in addition to the Certificate and Diploma learning outcomes (below), be able to:

- **Apply chemistry knowledge and understanding:**
describe advanced topics and areas of current research; choose appropriate models to provide explanations and predictions within the context of advanced topics or current research applying core chemistry concepts

- **Use experimentation to find chemical information and create new chemical knowledge and technologies:**
  plan and carry out investigative work and an open-ended research project, demonstrating an integrated understanding of techniques for synthesis, analysis and/or computational modelling

- **Use reliable sources to find chemical information:**
  efficiently find information to explore a specific field of research; summarise information gathered from a range of literature sources

- **Analyse and interpret data and solve problems creatively in chemistry and wider contexts:**
  define and solve problems in real-world and abstract contexts using incomplete or ambiguous data sets, applying critical analysis

- **Communicate chemistry:**
  communicate their research project context, aims and outcomes; communicate synoptic understanding with and without presentation aids

- **Demonstrate intellectual and personal development as a university learner and citizen to enable purposeful and responsible engagement with the world:**
  employ behaviours of a professional learner; manage their own learning, time and workload and build research group relationships over a project; exercise initiative; operate in a professional environment

Upon completion of a Diploma of Higher Education you will, in addition to the Certificate learning outcomes (below), be able to:

- **Apply chemistry knowledge and understanding:**
  choose appropriate representations to describe familiar and unfamiliar chemical systems and processes; explain concepts and theories and apply synoptic understanding; explain and predict properties, behaviours and trends with an appreciation of the limitations of familiar models and their position in the historical development of the discipline

- **Use experimentation to find chemical information and create new chemical knowledge and technologies:**
  assess risks and hazards of self-determined lab work; use advanced techniques and basic computational modelling; obtain reliable and accurate and precise data

- **Use reliable sources to find chemical information:**
  identify appropriate reliable texts to find information and to extend syllabus learning; extract meaning from journal articles; use reference management software

- **Analyse and interpret data and solve problems creatively in chemistry and wider contexts:**
  use their own synoptic knowledge and understanding of theoretical models and the results of information searches, experimental work and data analyses to solve well-defined problems in real-world contexts

- **Communicate chemistry:**
  in a mode appropriate to the designated audience

- **Demonstrate intellectual and personal development as a university learner and citizen to enable purposeful and responsible engagement with the world:**
  apply techniques of independent learning; contribute to the education of others within communities of learning

Upon completion of a Certificate of Higher Education you will be able to:

- **Apply chemistry knowledge and understanding:**
  use various representations as directed to describe familiar chemical systems and processes; explain concepts; use concepts, theories and models to explain and predict properties, behaviours and trends

- **Use experimentation to find chemical information and create new chemical knowledge and technologies:**
  assess risks and hazards of lab work; apply basic techniques to work safely and purposefully in the lab to obtain meaningful data; carry out basic computational operations

- **Use reliable sources to find chemical information:**
**Use recommended texts to find information and to reinforce syllabus learning; extract with guidance appropriate data from journal articles; correctly cite sources of information**

- **Analyse and interpret data and solve problems creatively in chemistry and wider contexts:** use their own knowledge and understanding of theoretical models, and results of information searches, their own experimental work and data analyses, to solve well-defined problems in familiar contexts

- **Communicate chemistry:** communicate scientific ideas in accurate English clearly through a variety of defined modes using correct terminology and effective presentation of data

- **Demonstrate intellectual and personal development as a university learner and citizen to enable purposeful and responsible engagement with the world:** apply techniques of university learning; self-reflect on what has been learned from received teaching; build collaborative learning relationships with peers and tutors and integrate into the university community

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial College degree programme. The Graduate Attributes are available at: [www.imperial.ac.uk/students/academic-support/graduate-attributes](http://www.imperial.ac.uk/students/academic-support/graduate-attributes)

### Entry Requirements

#### Academic Requirement

The **minimum** requirements for entry to this degree programme, and **typical offers**, are listed below:

- **A-Level:** AAA in Chemistry, Mathematics, plus a third subject, preferably Biology, Physics or Economics. **Typical offer:** A*A-A*A*. General Studies and Critical Thinking are not accepted.

- **IB:** 38 points overall, with HL6 in Chemistry, HL6 in Mathematics plus HL6 in a third subject as above. **Typical offer:** 39 points, with 7, 6, 6 at Higher Level.

For Language for Science degree programmes (F1R1, F1R2, F1R4), we require a minimum of grade B at AS-level in the relevant language (French, German, Spanish), or equivalent qualification (CEFR Level B1-B2). This degree programme is designed for non-fluent/non-native speakers. If fluent or the language is your native tongue, we recommend the Research Abroad programmes instead (F104, F101).

For further information on entry requirements, please go to [https://www.imperial.ac.uk/study/ug/apply/requirements/ugacademic/](https://www.imperial.ac.uk/study/ug/apply/requirements/ugacademic/)

#### Non-academic Requirements

- **N/A**

#### English Language Requirement

- **Higher requirement**

  Please check for other [Accepted English Qualifications](http://www.imperial.ac.uk/chemistry/undergraduate/course-structure-and-content/).  

#### Admissions Test/Interview

All applications through UCAS are vetted internally and short-listings are made for interview. There is no discrimination by date of application. Academic interviews are conducted in person by two academic staff or via Skype by one experienced academic staff member. You will be informed of the interview performance criteria in advance. Detailed written interview feedback and grading from interviewers is used, in conjunction with the application, to make an offer decision. There is no admissions test in use.

Please see the following webpage for further information:

[http://www.imperial.ac.uk/chemistry/undergraduate/admissions/application-and-entry-requirements/](http://www.imperial.ac.uk/chemistry/undergraduate/admissions/application-and-entry-requirements/)
Learning & Teaching Approach

Learning and Teaching Delivery Methods
The teaching and learning approach you will experience aims broadly that you gain an integrated understanding of chemistry and are able to apply this to solve real-world problems, and develop into a self-motivated, independent life-long learner. Teaching will include: lectures and other whole-cohort teaching sessions incorporating active learning (opportunities for you to apply your learning); discussions in tutorials in groups of about 8; application and problem-solving in workshops in groups of about 30; laboratory practicals and projects in small groups, pairs or individually; placement in an academic research group for an independent research project. Throughout the degree you will undertake independent study and you may choose to work individually or with peers.

Overall Workload
Your overall workload consists of face-to-face sessions and independent learning. While your actual contact hours may vary according to the optional modules you choose to study, the following gives an indication of how much time you will need to allocate to different activities at each level of the programme. At Imperial, each ECTS credit taken equates to an expected total study time of 25 hours. Therefore, the expected total study time is 1500 hours per year.

Typically, in years 1 and 2 you will spend in the order of 15% of your time on classroom teaching (around 230 hours), 15% in the laboratory, and 70% on independent study. Week-to-week your workload will fluctuate within reasonable limits, i.e. you will be more busy in some weeks than others. In later years the proportion of independent study increases to 80% in year 3, and 90% in year 4 (excluding the research project).

Assessment Strategy

Assessment Methods

Your achievement of the intended learning outcomes of the programme will be supported by formative assessment and measured by a range of summative assessments.

Formative assessment opportunities will include digital resources for self-assessment, discussions in tutorials, in workshops and in the laboratory, formative assignment submissions, and, during your final year project, formative literature / interim reports and discussions with your supervisor. Discussions with your personal tutor will address your intellectual and personal development and engagement.

Open- and closed-book examinations and tests will summatively assess your ability to apply chemistry knowledge and understanding, and to analyse and interpret data and solve problems (ILOs 1 and 4). Your performance in the lab will be an assessment also of your ability to use experimentation (ILOs 1,2,4). Oral exams (known as 'vivas') will additionally assess your ability to communicate chemistry (ILOs 1,4,5), and written reports, poster and oral presentations also your ability to find reliable chemical information (ILOs 1,3,4,5). Formal and informal groupwork, reflection on your learning from labs through the research skills passport, and structured self-reflective statements will assess your intellectual and personal development and engagement with the world (ILO 6).

</tbody>
</table>

* Variable with choice of options
Academic Feedback Policy

You will receive verbal feedback on your understanding and performance through informal discussions with peers, GTAs and staff in labs, workshops and tutorials. You will generally receive immediate verbal feedback on your performance in oral exams and presentations. The department manages submission of written work electronically, and you will receive feedback comments on your work similarly, within 10 working days of submission. Following exams, general feedback on the performance of the cohort is made available, and in early years you will receive individual feedback on your understanding through a scheduled discussion with a tutor, while in later years you can request feedback via your personal tutor.

The College’s Policy on Academic Feedback and guidance on issuing provisional marks to students is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Re-sit Policy

The College’s Policy on Re-sits is available at: www.imperial.ac.uk/student-records-and-data/for-current-students/undergraduate-and-taught-postgraduate/exams-assessments-and-regulations/

Mitigating Circumstances Policy

The College’s Policy on Mitigating Circumstances is available at: www.imperial.ac.uk/student-records-and-data/for-current-students/undergraduate-and-taught-postgraduate/exams-assessments-and-regulations/

Additional Programme Costs

This section should outline any additional costs relevant to this programme which are not included in students’ tuition fees.

<table>
<thead>
<tr>
<th>Description</th>
<th>Mandatory/Optional</th>
<th>Approximate cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Laboratory Personal Protective Equipment (PPE)</td>
<td>Mandatory</td>
<td>PPE is provided at no cost by the department, and replaced as appropriate</td>
</tr>
</tbody>
</table>

Students will need to consider the costs involved with placements. For students studying or working abroad as part of their programme, costs will vary with destination. Information on the types of costs which may be incurred can be found in the Placements Abroad Handbook which is available at https://www.imperial.ac.uk/placements/information-for-imperial-college-students/

**Important notice:** The Programme Specifications are the result of a large curriculum and pedagogy reform implemented by the Department and supported by the Learning and Teaching Strategy of Imperial College London. The modules, structure and assessments presented in this Programme Specification are correct at the time of publication but might change as a result of student and staff feedback and the introduction of new or innovative approaches to teaching and learning. You will be consulted and notified in a timely manner of any changes to this document.
### Programme Structure

#### Year 1 – FHEQ Level 4

**Students study all core modules.**

**Credit Total: 65**

---

1. **Core** modules are those which serve a fundamental role within the curriculum, and for which achievement of the credits for that module is essential for the achievement of the target award. Core modules must therefore be taken and passed in order to achieve that named award. **Compulsory** modules are those which are designated as necessary to be taken as part of the programme syllabus. Compulsory modules can be compensated. **Elective** modules are those which are in the same subject area as the field of study and are offered to students in order to offer an element of choice in the curriculum and from which students are able to select. Elective modules can be compensated.
### Year 3 - FHEQ Level 6

Students study all core modules (there is choice within modules).

</tr>
</tbody>
</table>

Credit Total 60

² Marks from the host institution are converted before inclusion in the year total, details are clearly communicated to students in advance of the final year.
## Progression and Classification

### Progression

In order to progress to the next level of study, you must have passed all modules (equivalent to 60 ECTS) in the current level of study at first attempt, at resit or by a compensated pass.

The overall weighted average for each year must be 40.00%, including where a module(s) has been compensated, in order for you to progress to the next year of the programme.

To remain on the Language for Science programme you must normally achieve a year total in year 2 of at least 65.00%. Other factors also dictate suitability for a research abroad placement, and you will be interviewed by the research abroad coordinator in order to confirm suitability for a proposed placement abroad. If you are not recommended for a research abroad placement you will be transferred to another MSci Chemistry programme.

The Year Abroad cannot be compensated.

### Classification

The marks from modules in each year contribute towards the final degree classification.

In order to be considered for an award, you must have achieved the minimum number of credits at the required levels prescribed for that award and met any programme specific requirements as set out in the Programme Specification.

Your classification will be determined through:

i) Aggregate Module marks for all modules

ii) Year Weightings

For this award, Year 1 is weighted at 7.50%, Year 2 at 20.00%, Year 3 at 36.25% and Year 4 at 36.25%.

The College sets the class of undergraduate degree that may be awarded as follows:

i) First 70.00% or above for the average weighted module results

ii) Upper Second 60.00% or above for the average weighted module results

iii) Lower Second 50.00% or above for the average weighted module results

iv) Third 40.00% or above for the average weighted module results

Please find the full Academic Regulations at [https://www.imperial.ac.uk/about/governance/academic-governance/regulations/](https://www.imperial.ac.uk/about/governance/academic-governance/regulations/). Please follow the prompts to find the set of regulations relevant to your programme of study.

### Programme Specific Regulations

Policies and regulations may vary for students on a year abroad. You are encouraged to familiarise yourself with the relevant policies and regulations which will underpin your studies while abroad before you go. If you have any questions, please talk to your host institution or your home departmental contact.

The College’s Academic and Examination Regulations can be found at: www.imperial.ac.uk/about/governance/academic-governance/regulations

Imperial College is an independent corporation whose legal status derives from a Royal Charter granted under Letters Patent in 1907. In 2007 a Supplemental Charter and Statutes was granted by HM Queen Elizabeth II. This Supplemental Charter, which came into force on the date of the College’s Centenary, 8th July 2007, established the College as a University with the name and style of “The Imperial College of Science, Technology and Medicine”. www.imperial.ac.uk/admin-services/secretariat/college-governance/charters/

Imperial College London is regulated by the Office for Students (OfS) www.officeforstudents.org.uk/advice-and-guidance/the-register/

This document provides a definitive record of the main features of the programme and the learning outcomes that a typical student may reasonably be expected to achieve and demonstrate if s/he takes full advantage of the learning opportunities provided. This programme specification is primarily intended as a reference point for prospective and current students, academic and support staff involved in delivering the programme and enabling student development and achievement, for its assessment by internal and external examiners, and in subsequent monitoring and review.
