Programme Leads	Sophia Yaliraki, Alan Spivey, João Pedro Malhado
Student cohorts covered by specification	2021-22 entry
Date of introduction of programme	October 21

Date of programme specification/revision	May 21
--	--------

Programme Overview

The practice of Chemistry in academia and industry is being revolutionised by advances in automation, artificial intelligence, and big data. The new era of digital molecular design will transform synthesis and fabrication from small molecules to materials and vaccines. Computational modelling can now allow predictive insights into the behaviour of complex molecules and systems, parallel experiments can be monitored in real-time to give spectroscopic data readouts that allow rapid analysis of kinetics and yield optimisation. Artificial intelligence (AI) and machine learning (ML) are revolutionising our ability to predict reaction outcomes, plan complex multistep syntheses and understand small-molecule-macromolecule interactions to name just a few advances. This Master's programme will equip you to navigate and contribute to this future of chemistry and join the next generation of scientists that are in great need and currently in short supply.

This one-year programme will comprise a series of modules to provide training in the area and application of Data Science, Machine Learning and Automation in a diverse range of areas in the chemical sciences. It is planned for the taught modules to be designed for on-line/remote delivery only but there will also be a one term 'practical project' module you can undertake either remotely or on campus. You will be able to choose from a broad range of projects and areas within the Digital Chemistry remit.

Learning Outcomes

Upon completion of the MSc in Digital Chemistry, you will be able to:

- Select appropriate machine learning methodology to solve a problem in chemistry, drug discovery or material sciences
- Implement a machine learning strategy using the main algorithms, libraries and APIs
- Select appropriate representations of chemical information suitable for algorithmic processing
- Use automated facilities to optimise chemical reaction conditions
- Create curated chemical information datasets using automated experiments or computation
- Argue for the relevance of digital chemistry technologies in addressing contemporary industrial and research challenges
- Work in groups
- Be aware of ethical issues in data science
- Design and carry out research in an unfamiliar topic in a short time
- Communicate their findings for experts and non-experts

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial College degree programme. The Graduate Attributes are available at: www.imperial.ac.uk/students/academic-support/graduate-attributes

Entry Requirements

Academic Requirement	The minimum requirement is normally a 2:1 UK Bachelor's Degree with Honours in Chemistry, Biochemistry, Chemical Engineering (or a comparable qualification recognised by the College). Applicants with a 2:1 UK Bachelor's degree in a data science related area (computing, applied mathematics, statistics) will be considered on a case by case basis. For further information on entry requirements, please go to www.imperial.ac.uk/study/pg/apply/requirements/pgacademic
Non-academic Requirements	N/A
English Language Requirement	Higher requirement (PG) Please check for other Accepted English Qualifications
Admissions Test/Interview	Online interviews to shortlisted candidates

The programme's competency standards documents can be found at: [TBC](#)

Learning & Teaching Approach

Learning and Teaching Delivery Methods

The Digital Chemistry programme will be delivered as a fully online degree, apart from the project where you will have the option to either carry this out remotely or on campus. Teaching and learning on the programme will be delivered by the departmental academic staff through a range of methods including: recorded lectures, online engagement points, guided reading, scheduled live tutorials, coding exercises and "lab-in-a-box" remote experiments. You will also learn as part of a cohort and *via* interactions with your peers through discussion boards (which can be used as assessment through graded discussion prompts), group projects and peer assessed exercises. Although you will be working remotely, staff will be available to support you in your learning and facilitate ways in which you can work most effectively.

The whole program, ranging from live classroom sessions to global team projects, allows you individually to participate in a seamless, flexible, and engaging learning experience and ensures the highest quality online learning environment. The platform functionality allows you to have a seamless, innovative, and differentiated learning experience through:

- 1) rigorous assessments and targeted academic feedback at scale;
- 2) collaborations with other students through applied projects across regions;
- 3) participation in a vibrant and supportive social learning community through extensive high engagement features.

Overall Workload

Your overall workload consists of face-to-face sessions and independent learning. The following gives an indication of how much time you will need to allocate to different activities at each level of the programme. At Imperial, each [ECTS credit](#) taken equates to an expected total study time of 25 hours. Therefore, the expected total study time is 2250 hours per year. The research project will amount to 1000 hours, and circa 20% of time spent on the remaining modules (250 hours) will be spent in various structured activities (lectures, workshops and practical sessions) and 80% (1000 hours) in independent study.

Assessment Strategy

Assessment Methods

The format of assessments will vary according to the aims, content and learning outcomes of each module. There will be short assessments for each module, some of which will be summative, followed by a final substantive summative assessment, which in most modules will take the form of a capstone project. Constructive alignment is being used throughout, moving from Intended Learning Outcomes, to assessments, to all video, readings and practice material, so that all course content supports students working towards the overall achievement of the module and programme-level Learning Outcomes.

Assessment methodology is module specific. These include programming assignments, critical essays, written reports, contributions to symposium-like discussions, video and poster presentations, business case development, timed remote assessments. Overall, the various combinations of methods of assessment will allow a full assessment of your learning and achievements. Formative assessment opportunities will in general precede summative assessment such that you can receive feedback to improve your performance through the duration of the programme.

The final research project provides training in applied research of digital chemistry techniques. These projects will be motivated by topical research interests. Additionally, there will be the opportunity for industry-motivated projects. The research project provides the space for you to synthesize all the learnings from the programme into a single, coherent and novel activity. To support online delivery, and provide scalability, the research project is scaffolded in relation to the typical stages of a research study: literature review, underpinning learning or exploratory data analysis, study design and project proposal, conducting the research, analysing the research results and presenting and promoting these findings. Each stage is supported by a formative assessment, providing the opportunity for both feedback and direction on following stages. The final assessment involves both a written report and oral examination. In both cases, consideration will be given to both communication with a technical audience, and a lay audience.

Excluding the final research project that counts for 45% of the degree, the assessment in the remaining modules is ca.10% exams, 60% coursework and 30% practical work.

Academic Feedback Policy

The Digital Chemistry Assessment Schedule will set out the agreed submission deadlines, marking periods and feedback return dates for each academic year in advance. The individual deadlines captured in the Assessment Schedule will be discussed and confirmed by the teaching team ahead of delivery.

The program will provide marks/feedback on assessment to align with College policy. This is a maximum period and much of the feedback will be provided sooner than this. For quizzes and MCQs, more immediate provisional marks are likely to be available once marks are checked by the team and depending on the nature of the assessment. With each returned coursework assignment, an individual evaluation will be provided. This will ensure that formative assessment is being implemented optimally with your learning experience being driven through the feedback received.

You will receive general feedback on the cohort examination performance. You will be provided with a percentage grade for coursework and examinations with the final numerical mark only confirmed after the Board of Examiners Meeting and will be released by Registry. Grades received during the year are deemed provisional until confirmed by the Final Board of Examiners.

The College's Policy on Academic Feedback and guidance on issuing provisional marks to students is available at:

www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Re-sit Policy

The College's Policy on Re-sits is available at: www.imperial.ac.uk/student-records-and-data/for-current-students/undergraduate-and-taught-postgraduate/exams-assessments-and-regulations/

Mitigating Circumstances Policy

The College's Policy on Mitigating Circumstances is available at: www.imperial.ac.uk/student-records-and-data/for-current-students/undergraduate-and-taught-postgraduate/exams-assessments-and-regulations/

Additional Programme Costs

This section should outline any additional costs relevant to this programme which are not included in students' tuition fees.

Description	Mandatory/Optional	Approximate cost
Laptop	Mandatory	£500

Important notice: The Programme Specifications are the result of a large curriculum and pedagogy reform implemented by the Department and supported by the Learning and Teaching Strategy of Imperial College London. The modules, structure and assessments presented in this Programme Specification are correct at time of publication but might change as a result of student and staff feedback and the introduction of new or innovative approaches to teaching and learning. You will be consulted and notified in a timely manner of any changes to this document.

Programme Structure ¹					
Year 1 – FHEQ Level 7 (Except for Key Concepts in Chemistry and Programming in Python which is at level 6)					
Students study all compulsory modules and must choose one of the elective options from group A (this choice must be approved by the course directors).					
Code	Module Title	Core/ Elective/ Compulsory	Group	Term	Credits
	Key Concepts in Chemistry	Elective ^a	A	1	5
	Programming in Python	Elective ^a	A	1	5
	Data Analytics in Chemistry	Compulsory		1	5
	“Hacking” for Chemists	Compulsory		1	5
	Automation in Chemistry, Drug discovery and Materials	Compulsory		1	5
	Ethics in Data Science and Artificial Intelligence	Compulsory		1	5
	Journal Club	Compulsory		2	5
	Artificial Intelligence in Chemistry: Materials	Compulsory		2	5
	Artificial Intelligence in Chemistry: Drug discovery	Compulsory		2	5
	Design of Experiments (DoE)	Compulsory		2	5
	Chemical Entrepreneurship and Sustainability Innovation in Chemistry	Compulsory		2	5
	Research Project (remote or on-campus)	Compulsory		3	40
Credit Total					90

^a Students with a Chemistry or related background will generally take the Programming in Python module; Students with a Data Science or related background will generally take the Key Concepts in Chemistry module.

¹ **Core** modules are those which serve a fundamental role within the curriculum, and for which achievement of the credits for that module is essential for the achievement of the target award. Core modules must therefore be taken and passed in order to achieve that named award. **Compulsory** modules are those which are designated as necessary to be taken as part of the programme syllabus. Compulsory modules can be compensated.

Elective modules are those which are in the same subject area as the field of study and are offered to students in order to offer an element of choice in the curriculum and from which students are able to select. Elective modules can be compensated.

Award and Classification for Postgraduate Students

Award of a Postgraduate Certificate (PG Cert)

To qualify for the award of a postgraduate certificate a student must have a minimum of 30 credits at Level 7 (this may include a maximum of 10 credits from Level 6 where this is approved as part of the award).

Award of a Postgraduate Degree (MSc)

To qualify for the award of a postgraduate degree a student must have:

1. accumulated credit to the value of no fewer than 90 credits at level 7 or above of which no more than 15 credits may be from credit level 6;
2. and no more than 15 credits as a Compensated Pass;
3. met any specific requirements for an award as outlined in the approved programme specification for that award.

Classification of Postgraduate Taught Awards

The College sets the class of Degree that may be awarded as follows:

1. Distinction: The student has achieved an overall weighted average of 70.00% or above across the programme.
2. Merit: The student has achieved an overall weighted average of above 60.00% but less than 70.00%.
3. Pass: The student has achieved an overall weighted average of 50.00% but less than 60.00%.
 - a. For a Master's, students must normally achieve a distinction (70.00%) mark in the dissertation or designated final major project (as designated in the programme specification) in order to be awarded a distinction.
 - b. For a Master's, students must normally achieve a minimum of a merit (60.00%) mark in the dissertation or designated final major project (as designated in the programme specification) in order to be awarded a merit.
 - c. Modules taken at level 6 as part of the programme specification for a named postgraduate award will contribute to the determination of pass, merit or distinction for any taught postgraduate award and are included in the calculation of the overall weighted average.

The College's Academic and Examination Regulations can be found at:
www.imperial.ac.uk/about/governance/academic-governance/regulations

Imperial College is an independent corporation whose legal status derives from a Royal Charter granted under Letters Patent in 1907. In 2007 a Supplemental Charter and Statutes was granted by HM Queen Elizabeth II. This Supplemental Charter, which came into force on the date of the College's Centenary, 8th July 2007, established the College as a University with the name and style of "The Imperial College of Science, Technology and Medicine".
www.imperial.ac.uk/admin-services/secretariat/college-governance/charters/

Imperial College London is regulated by the Office for Students (OfS)
www.officeforstudents.org.uk/advice-and-guidance/the-register/

This document provides a definitive record of the main features of the programme and the learning outcomes that a typical student may reasonably be expected to achieve and demonstrate if s/he takes full advantage of the learning opportunities provided. This programme specification is primarily intended as a reference point for prospective and current students, academic and support staff involved in delivering the programme and enabling student development and achievement, for its assessment by internal and external examiners, and in subsequent monitoring and review.
