Specification Details	
Programme Lead	Prof Oscar Ces
Student cohorts covered by specification	2026-27 entry
Date of introduction of programme	October 26
Date of programme specification/revision	October 2025

Programme Overview
Synthetic Cell Science is an exciting emerging discipline that sits at the interface of the physical, life and engineering sciences. Synthetic Cell Science aims to construct biomimetic nano- and micro-robots from non-living components that are brought together in user-defined combinations. These biological machines are designed to replicate the behaviour seen in real cells including metabolism, communication, decision making, motility, and even evolution. Synthetic cells offer the promise to revolutionise fundamental and applied science as they can support the development of model systems that can unravel fundamental biological processes and explore the origin of life through a ‘learning by building’ approach. In addition, they will underpin the creation of functional microrobots for therapeutics, agrochemical delivery, diagnostics, regenerative medicine, green biosynthesis and bioremediation. This one-year stand-alone MRes in Synthetic Cell Science, the first in the UK, will train a future generation of researchers providing them with the skills and expertise to spearhead the development and translation of synthetic cell science and bottom-up synthetic biology. This will include hands-on experience of how to make and characterize synthetic cells from first principles (including the use of microfluidics, 3D printing, artificial intelligence and bottom-up engineering biology) in cutting edge facilities such as the £200M Molecular Sciences Research Hub and the £5M Advanced Hackspace. Students will then apply the synthetic cells they have constructed to translational challenges such delivery in biological systems. Synthetic Cell researchers are in high demand from industry and academia supporting applications in the following exemplar areas: Health: 1. Cell delivery systems (patient tailored treatment); 2. Synthetic blood; 3. Drug screening methods for antibiotics, agrichemical and against antimicrobial resistance; 4. Disease monitoring and biosensor technologies; 5. Synthetic tissues and organ growth/regenerations. Materials: 2. Smart and environmentally friendly materials for high-tech industry (100% reusable, capable of self-repair); 2. Biodegradable polymers and plastics; 3. Sustainable chemicals; 4. Microreactor technologies; 5. Early warning toxin detection for the defense sector. Energy and Environment: 1. Biofuels and other compounds produced by synthetic cells; 2. Zero waste production methods; 3. Artificial photosynthesis to capture and store carbon dioxide; 4. Biobatteries.

Food:

1. Facilitation of sustainable production of safe and healthy food including synthetic meat; 2. New materials for food biotechnology; 3. New methods for pathogen control; 4. Smart long lived delivery systems for agritech.

Job opportunities are available in large industry, SMEs (including start-up creation), academia, defence, green-tech, policy development, healthcare, med-tech, VC/consultancy and government research laboratories.

The programme is run by Department of Chemistry and fabriCELL (an Imperial College Network of Science).

Learning Outcomes

The programme will enable **you** to:

1. **Demonstrate** a deep understanding of the core concepts in Synthetic Cell Science associated to your chosen research area, with the ability to **conceptualise** and **explore** theories, data and methods relevant to the field.
2. **Employ** research and rapid prototyping techniques, including information retrieval, experimental design and statistics, modelling, sampling, biomolecular and physical/chemical/engineering techniques and laboratory safety with a view to the design, construct and validation of synthetic cells. This will include where appropriate translation applications of Synthetic Cells.
3. **Independently evaluate** and **apply** the essential facts, concepts, principles and theories relevant to the student's project.
4. **Perform** research within a multi-disciplinary environment – bridging the physical, life and engineering sciences, **developing** management and communication skills, including problem definition, project design, decision processes, teamwork, written and oral reports, scientific publications.
5. **Critically evaluate** your own and others' work, including an appreciation of novelty and significance.
6. **Recognise and critically appraise** broader issues in Synthetic Cell research including the commercialisation and translation opportunities Synthetic Cell research affords. This will include developing an understanding of public engagement and policy development which is important to the deployment of these technologies in the broader public realm.
7. **Compose and deliver** written, oral and visual science communications, which are effective at conveying the message to a variety of audiences.
8. **Demonstrate** laboratory and/or computational **skills** required to perform Synthetic Cell research and prototyping.
9. **Design** a novel research project and **compose** a corresponding grant proposal, of a style appropriate for submission to an academic funding body.
10. **Propose** tractable research objectives for your research project.

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial degree programme. The Graduate Attributes are available at:

<https://www.imperial.ac.uk/about/education/our-graduates/>

Entry Requirements

Academic Requirement	The minimum requirement is normally a 2:1 UK Bachelor's Degree with Honours in a physical science, life science/biomedical degree or engineering based subject (or a comparable qualification recognised by the university). For further information on entry requirements, please go to PG: www.imperial.ac.uk/study/apply/postgraduate-taught/entry-requirements/accepted-qualifications/
Non-academic Requirements	None
English Language Requirement	Standard requirement (PG) Please check for other Accepted English Qualifications
Admissions Test/Interview	Candidates will be invited for interview in person or online.

The programme's competency standards documents can be found at: www.imperial.ac.uk/chemistry/postgraduate/mres/

Learning & Teaching Approach

Learning and Teaching Delivery Methods

The course's aim is to teach the practice of science with the learning and teaching strategy being constructively aligned with the knowledge, skills and abilities required by professional scientists in academia, government, industries, SMEs and NGOs.

Most of the weighting in the course is focussed on the research component – a proposal writing exercise and the research project – which reflect the major activities undertaken by modern researchers in the field of Synthetic Cell Science. In addition, the taught component exposes you to fields outside your immediate project area, including (i) generic research skills at the interface of physical, biological and engineering sciences (ii) the skills of designing and prototyping equipment relevant to the design, construction and characterisation of Synthetics Cells and (iii) the translation of Synthetic Cell breakthroughs to third party stakeholders.

Across the programme, a range of teaching methods are used including: laboratory work, computational work, seminars, lectures, practicals and prototyping workshops and online material. It may be possible for projects to be carried out partly or wholly at an external organisation and requests will be considered on a case-by-case basis.

Overall Workload

Your overall workload consists of face-to-face sessions and independent learning. The following gives an indication of how much time you will need to allocate to different activities at each level of the programme. At Imperial, each ECTS credit taken equates to an expected total study time of 25 hours. Therefore, the expected total study time is 2250 hours per year comprising approximately 375 hours for the HackSynCell prototyping module, including lectures and practical work, 125 hours of the Nanomedicine module, 250 hours of planning and designing the research project guided by your supervisors, and 1500 hours of individual research project work.

Assessment Strategy

Assessment Methods
Each assessment is designed to test your appropriate acquisition of separate skills required for the furthering of a career in synthetic cell research and associated professional paths (All assessments are linked to the intended learning outcomes listed above as indicated in brackets below). The HackSynCell assessments will test your understanding and communication of various prototyping methods and experimental evaluation of the created prototype equipment (Learning outcomes 1, 2, and 6 - 8). The written examination associated with the Nanomedicine module will test your understanding and critical evaluation of the latest approaches and techniques in synthetic cell science with respect to healthcare including understanding of the fundamentals of biomedical nanoscience, leading into nanomedicine and it will assess problem solving with respect to applications (Learning Outcomes 1, 5, 6). The Project proposal will assess your aptitude to critically analyse published scientific literature, plan the work packages necessary to complete the research project and reflect on the ethical, safety and commercial/societal considerations (Learning outcomes 1,3, 5-7, 9-10). The Research Project will be judged through a manuscript, evaluation of research performance, a presentation, and an oral examination. The manuscript will evaluate your skills at presenting, describing and critically discussing your own experimental data in the format typical of an article published in peer-reviewed journals. At the presentation, you will be assessed on your ability to present your research to your examiners with the help of visual tools in a clear, concise fashion, summarising your findings and their relevance. You will also be tested on your ability to answer questions directly relevant to your project. Your oral examination will probe your knowledge and understanding of the relevant literature, methodology and research outcomes including theoretical and practical knowledge of the subject area, of the experimental techniques used and their limitations as well as the proposed follow-on work (Learning outcomes 1-8 and 10).
Academic Feedback Policy
Imperial's Policy on Academic Feedback and guidance on issuing provisional marks to students is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/ HackSynCell module will receive written feedback. Research project manuscripts and oral exams are marked by the research supervisor(s) and an independent assessor. Research lab performance is marked by the research supervisor(s). Staff-student meetings are held two to three times a year to communicate general feedback between student representatives and the course directors.
Re-sit Policy
Imperial's Policy on Re-sits is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/
Mitigating Circumstances Policy

Imperial's Policy on Mitigating Circumstances is available at:

www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Additional Programme Costs

This section should outline any additional costs relevant to this programme which are not included in students' tuition fees.

Description	Mandatory/Optional	Approximate cost
Laptop with camera and microphone	Mandatory	£400-600

Important notice: The Programme Specifications are the result of a large curriculum and pedagogy reform implemented by the Department and supported by the Learning and Teaching Strategy of Imperial College London. The modules, structure and assessments presented in this Programme Specification are correct at time of publication but might change as a result of student and staff feedback and the introduction of new or innovative approaches to teaching and learning. You will be consulted and notified in a timely manner of any changes to this document.

Programme Structure ¹					
Year 1 - FHEQ Level 7 You will study all core and compulsory modules					
Code	Module Title	Core/ Compulsory	Group	Term	Credits
CHEM70063	HackSynCell	Compulsory	N/A	Autumn-Spring	15
CHEM70059	Nanomedicine	Compulsory	N/A	Autumn	5
CHEM70065	Proposal for Synthetic Cells Research Project	Core	N/A	Autumn	10
CHEM70064	Synthetic Cells Research Project	Core	N/A	Spring-Summer	60
Credit Total					90

¹ **Core** modules are those which serve a fundamental role within the curriculum, and for which achievement of the credits for that module is essential for the achievement of the target award. Core modules must therefore be taken and passed in order to achieve that named award. **Compulsory** modules are those which are designated as necessary to be taken as part of the programme syllabus. Compulsory modules can be compensated. **Elective** modules are those which are in the same subject area as the field of study and are offered to students in order to offer an element of choice in the curriculum and from which students are able to select. Elective modules can be compensated.

Progression and Classification

Award of a Masters Degree (including MRes)

To qualify for the award of a postgraduate degree you must have:

1. accumulated credit to the value of no fewer than 90 credits at Level 7
2. and no more than 15 credits as a Compensated Pass

Classification of Postgraduate Taught Awards

The university sets the class of Degree that may be awarded as follows:

1. Distinction: 70.00% or above.
2. Merit: 60.00% or above but less than 70.00%.
3. Pass: 50.00% or above but less than 60.00%.

Your classification will be determined through the Programme Overall Weighted Average meeting the threshold for the relevant classification band.

Your degree algorithm provides an appropriate and reliable summary of your performance against the programme learning outcomes. It reflects the design, delivery, and structure of your programme without unduly over-emphasising particular aspects.

Programme Specific Regulations

Supporting Information
The Programme Handbook is available upon enrolment.
The Module Handbook is available upon enrolment.
Imperial's entry requirements for postgraduate programmes can be found at: www.imperial.ac.uk/study/pg/apply/requirements
Imperial's Quality & Enhancement Framework is available at: www.imperial.ac.uk/registry/proceduresandregulations/qualityassurance
Imperial's Academic and Examination Regulations can be found at: www.imperial.ac.uk/about/governance/academic-governance/regulations
Imperial College London is an independent corporation whose legal status derives from a Royal Charter granted under Letters Patent in 1907. In 2007 a Supplemental Charter and Statutes was granted by HM Queen Elizabeth II. This Supplemental Charter, which came into force on the date of Imperial's Centenary, 8th July 2007, established Imperial as a University with the name and style of "The Imperial College of Science, Technology and Medicine". www.imperial.ac.uk/admin-services/governance/university-governance-structure/charters/
Imperial College London is regulated by the Office for Students (OfS) www.officeforstudents.org.uk/advice-and-guidance/the-register/
This document provides a definitive record of the main features of the programme and the learning outcomes that you may reasonably be expected to achieve and demonstrate if you take full advantage of the learning opportunities provided. This programme specification is primarily intended as a reference point for prospective and current students, academic and support staff involved in delivering the programme and enabling student development and achievement, for its assessment by internal and external examiners, and in subsequent monitoring and review.
