Programme Lead	Dr Rolandos Potamias
Student cohorts covered by specification	2026-27 entry
Date of introduction of programme	October 21
Date of programme specification/revision	July 26

Programme Overview

The MRes in AI and ML aims to train a new generation of Artificial Intelligence researchers and innovators and is designed to provide focussed AI training and a high-level, supervised research project that allows students to develop high-level analytical skills, and show their ability to design and lead projects.

AI is becoming increasingly pervasive across many sectors of business and public service, and this growth in application calls for people who combine theoretical grounding in AI with the ability to imagine, lead and deliver Research & Development (R&D) projects that meet exacting regulatory and real-world performance expectations, often working at the interface between AI and other disciplines. The 12-month MRes programme can be a more realistic initial commitment than a PhD for many graduates, people already employed in AI, and many employers - and for some it will also provide a pathway on to a Doctoral programme, able to start their research career with good publications during the MRes studies

The MRes in AI and ML will be a one-year full-time programme leading to the MRes award. The degree is built around one large research project to ensure students demonstrate the ability to manage research independently, learn the multidisciplinary approaches needed to bring AI/ML ideas into practice. Students on the programme would work on a wide range of AI topics, offering the opportunity to work at the leading edge in many areas of AI and across areas as well as numerous leading edge projects applying AI in domains such as health, business and finance, communications, and energy / product supply systems. You would also benefit from the cross-departmental setup, allowing interaction and exchange with students from other areas of AI and computer science in a supportive and inspiring environment; and with students in departments applying AI, to develop their interdisciplinary knowledge.

The programme involves taught-module lectures with appropriate assessment (coursework) and practical work. In the first term you will also select and begin work on your individual research project. Work on your research project continues intensively until the end of the academic year. The research project would normally be supervised by at least one AI expert, and often by more than one supervisor. Some students may also have a co-supervisor from industry.

You will also be required to complete the programme of professional skills development courses delivered by the Imperial College Graduate School, and would attend seminars and journal clubs throughout the year. A variety of seminars and workshops is provided to deepen and broaden the students' research skill-base.

Learning Outcomes

Upon completion of the MRes in AI and Machine Learning you will be able to:

1. Apply **broad knowledge of state of the art AI and machine learning**, to critically assess the strengths and weaknesses of a **range of research and innovation approaches**.
2. Apply the principles of **responsible research and innovation**, data protection, ethics and bias relevant to AI research and innovation
3. **Create software for advanced AI** and machine learning using appropriate computing languages (e.g. Python) and frameworks (e.g. PyTorch, Tensorflow).
4. **Evaluate the research literature** and other sources (e.g. patents, software) in depth in your chosen field.
5. In your field of in-depth study, identify **key advances, uncertainties and opportunities in AI methods** and the evidence on organisational, business and human factors for applications.
6. Devise an AI **research and development (R&D) proposal for a simulated business case** from scratch, and present the proposal convincingly for decision-makers.
7. **Independently manage a substantial and novel R&D project** and produce a thesis report to include analysis of leading-edge AI methods, evaluation of data sources and devising optimal approaches for AI development and for testing.
8. Conduct an individual research project by managing time and responding to emerging findings and unforeseen challenges to ensure completion within time and resource limits.

9. Present effectively and convincingly scientific data, software, and results; via report writing and face-to-face presentations.
10. Apply skills in **communication, teamwork, leadership and influencing** suitable for work in a fast-moving multidisciplinary environment

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial degree programme. The Graduate Attributes are available at:
<https://www.imperial.ac.uk/about/education/our-graduates/>

Entry Requirements

Academic Requirement	Successful applicants normally have a 1st UK Honours degree or international equivalent degree, in a relevant scientific or technical discipline, such as computer science, relevant engineering courses, mathematics, statistics and physics - they will all need some programming ability and familiarity with AI basics. Students with other natural science degrees (e.g. life sciences, chemistry, earth sciences) who also have strong mathematical or computing grounding - which must include programming skills and some knowledge of AI basics - may also be considered for relevant projects. For further information on entry requirements, please go to this webpage: www.imperial.ac.uk/study/apply/postgraduate-taught/entry-requirements/accepted-qualifications/
Non-academic Requirements	N/A
English Language Requirement	Standard requirement IELTS score of 6.5 overall (minimum 6.0 in all elements)
Admissions Test/Interview	In addition to references, CV, transcripts and personal statement, you will be asked to submit a research statement (1-page maximum, excluding references) describing a hypothetical one-year research project. This will contribute to enabling us to evaluate your research potential. Please note that the content of this hypothetical proposal does not correspond to the project you will do if admitted to the MRes – it is for the purpose of admissions assessment only.

The programme's competency standards documents can be found at:
www.imperial.ac.uk/computing/prospective-students/courses/competence/

Learning & Teaching Approach

Learning and Teaching Delivery Methods

Scheduled Learning & Teaching Methods

- Coursework, often in groups
- Lectures
- Individual research project (one-to-one meetings with supervisors)

- Seminars, symposia & workshops

E-learning & Blended Learning Methods

- Virtual Learning Environment: Canvas
- Online discussions (Piazza)
- Online quizzes and interactive content
- Online videos

Project Learning Methods:

- Group and individual project work
- Conferences
- Symposia

Overall Workload

Your overall workload consists of face-to-face sessions and independent learning. While your actual contact hours may vary according to the optional modules you choose to study, the following gives an indication of how much time you will need to allocate to different activities at each level of the programme. At Imperial, each ECTS credit taken equates to an expected total study time of 25 hours. Therefore, the expected total study time is 2250 hours per year for the 90 ECTS MRes programme.

For a typical 5 ECTS module, it is expected that around 28 hours would be spent in lectures, tutorials or labs, and ca 97 hours in independent study for the modules. For a typical 10 ECTS module, it is expected to spend ca 50 hours in lectures, seminars or labs and ca 200 hours in independent study. For the project, we expect that students spend 100 hours in research meetings and other research group related activities and 1,400 hours engaged in independent research studies.

Assessment Strategy

Assessment Methods

- Oral presentations including a presentation for non-technical audiences
- Coursework including multiple choice tests, practicals (exercises) and problem sheets
- Written reports, including a research thesis

The various formal assessments of the taught modules (coursework, practicals, and problem sheets) allow the students to apply acquired detailed knowledge and understanding of the essential concepts in the AI and machine learning field, including state-of-the-art coding algorithms, software frameworks, benchmarking datasets, and best practice.

Through the Research Tutorial's assessments, you will demonstrate the ability to conduct and assess critically scientific reviews and understand the wider AI domain/landscape. The module leader not only provides feedback on the academic performance, but also on the standard of academic writing and your presentation skills, which supports the development of professional and personal skills. (The assessment includes leading a paper discussion, preparing the slides for the presentation, and writing a summary report). The research tutorials will also allow you to develop critical self-evaluation and how to respond to various opinions which are expressed in discussions.

After successfully completing the three assessment formats used for the Individual Research Project, you will be able to produce a complex research hypothesis, informed by your in-depth knowledge of AI algorithms, data set requirements and ethical frameworks. More generally, you will be able to demonstrate self-direction and originality in tackling and solving problems; you will learn how to act autonomously in planning and implementing tasks at a professional or equivalent level.

The module 'Simulated R&D Proposal' is assessed mostly by written reports (together with a 10% coursework on AI ethics), allowing you to check on your progress in identifying key advances, uncertainties and opportunities in AI methods and the evidence on organisational, business and human factors for applications. The assessments require you to develop and write a simulated business case from scratch, with expert decision-makers in mind as a target audience.

	Year of MRes
Coursework	20%
Practical	15%
Exam	5%
Oral	20%
Written	40%

This is followed by a meeting convened by the Programme Director/Deputy, to discuss: progress and any extra support needed; moderation of marks; and suitable scales of ambition and scope for the main projects. All measures are to assure that assessment outcomes are fair and reliable and that assessment criteria have been applied consistently.

Academic Feedback Policy

Feedback may be provided in one of a number of formats, including:

- Oral (during or after lectures)
- Personal (discussion with academics and supervisors)
- Interactive (problem solving tutorials with GTAs & study groups)

Individual feedback is normally not provided on written examinations, if such are taken.

Imperial's Policy on Academic Feedback and guidance on issuing provisional marks to students is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Re-sit Policy

Imperial's Policy on Re-sits is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Mitigating Circumstances Policy

Imperial's Policy on Mitigating Circumstances is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Additional Programme Costs

This section should outline any additional costs relevant to this programme which are not included in students' tuition fees.

Description	Mandatory/Optional	Approximate cost
N/A	N/A	N/A

Important notice: The Programme Specifications are the result of a large curriculum and pedagogy reform implemented by the Department and supported by the Learning and Teaching Strategy of Imperial College London. The modules, structure and assessments presented in this Programme Specification are correct at time of publication but might change as a result of student and staff feedback and the introduction of new or innovative approaches to teaching and learning. You will be consulted and notified in a timely manner of any changes to this document.

Programme Structure ¹					
Year 1 - FHEQ Level 7 You will study all core/compulsory modules. Choose TWO modules from the elective modules, one of which must be in Autumn term.					
Code	Module Title	Core/ Compulsory/ Elective	Group	Term	Credits
COMP70059	MRes Individual Research Project	Core		Autumn-Summer	60
COMP70060	Simulated Research and Development Project Proposal	Core		Autumn-Summer	10
COMP70061	Research Tutorials in AI and Machine Learning	Core		Autumn-Spring	10
COMP70006	Computational Finance	Elective		Autumn	5
COMP70015	Mathematics for Machine Learning	Elective		Autumn	5
COMP70021	Quantum Computing	Elective		Autumn	5
COMP70028	Reinforcement Learning	Elective		Autumn	5
COMP70050	Machine Learning	Elective		Autumn	5
COMP70053	Python Programming	Elective		Autumn	5
COMP70077	Logic and Symbolic AI	Elective		Autumn	5
COMP70100	Computational Neurodynamics	Elective		Autumn	5
COMP70101	Human-Robot Interaction	Elective		Autumn	5
COMP70103	Statistical Information Theory	Elective		Autumn	5
COMP70110	Computer Vision	Elective		Autumn	5
COMP70113	Generative AI	Elective		Autumn	5
COMP70114	Machine Learning Systems and Hardware	Elective		Autumn	5
COMP70007	Computational Optimisation	Elective		Spring	5
COMP70010	Generative AI	Elective		Spring	5
COMP70014	Machine Learning for Imaging	Elective		Spring	5
COMP70016	Natural Language Processing	Elective		Spring	5
COMP70019	Probabilistic Inference	Elective		Spring	5

¹ **Core** modules are those which serve a fundamental role within the curriculum, and for which achievement of the credits for that module is essential for the achievement of the target award. Core modules must therefore be taken and passed in order to achieve that named award. **Compulsory** modules are those which are designated as necessary to be taken as part of the programme syllabus. Compulsory modules can be compensated. **Elective** modules are those which are in the same subject area as the field of study and are offered to students in order to offer an element of choice in the curriculum and from which students are able to select. Elective modules can be compensated.

COMP70031	Formal Methods for Safe AI	Elective		Spring	5
COMP70067	Robot Learning	Elective		Spring	5
COMP70076	Causality and Explanation in AI	Elective		Spring	5
COMP70084	Robotics (not running in 2026-27)	Elective		Spring	5
COMP70093	Logic-Based Learning	Elective		Spring	5
COMP70105	Deep Graph-Based Learning	Elective		Spring	5
COMP70112	Non-Euclidean Methods in Machine Learning	Elective		Spring	5
COMP70116	World Models	Elective		Spring	5
COMP70118	Generative Methods in AI for Science	Elective		Spring	5
Credit Total					90

Award and Classification for Postgraduate Students

Award of a Postgraduate Degree (MRes)

To qualify for the award of a postgraduate you must have:

1. accumulated credit to the value of no fewer than 90 credits at level 7 or above of which no more than 15 credits may be from credit level 6;
2. and no more than 15 credits as a Compensated Pass;
3. met any specific requirements for an award as outlined in the approved programme specification for that award.

Classification of Postgraduate Taught Awards

The university sets the class of Degree that may be awarded as follows:

1. Distinction: 70.00% or above.
2. Merit: 60.00% or above but less than 70.00%.
3. Pass: 50.00% or above but less than 60.00%.

For a Masters, your classification will be determined through the Programme Overall Weighted Average and the designated dissertation or final major project module meeting the threshold for the relevant classification band

Your degree algorithm provides an appropriate and reliable summary of your performance against the programme learning outcomes. It reflects the design, delivery, and structure of your programme without unduly over-emphasising particular aspects.

Programme Specific Regulations

Imperial's Academic and Examination Regulations can be found at:
www.imperial.ac.uk/about/governance/academic-governance/regulations

Imperial College London is an independent corporation whose legal status derives from a Royal Charter granted under Letters Patent in 1907. In 2007 a Supplemental Charter and Statutes was granted by HM Queen Elizabeth II. This Supplemental Charter, which came into force on the date of Imperial's Centenary, 8th July 2007, established Imperial as a University with the name and style of "The Imperial College of Science, Technology and Medicine".
www.imperial.ac.uk/admin-services/secretariat/university-governance-structure/charters/

Imperial College London is regulated by the Office for Students (OfS)
www.officeforstudents.org.uk/advice-and-guidance/the-register/

This document provides a definitive record of the main features of the programme and the learning outcomes that you may reasonably be expected to achieve and demonstrate if you take full advantage of the learning opportunities provided. This programme specification is primarily intended as a reference point for prospective and current students, academic and support staff involved in delivering the programme and enabling student development and achievement, for its assessment by internal and external examiners, and in subsequent monitoring and review.
