Imperial College London

Programme Specification (Master's Level)

MRes in Computational Methods in Ecology and Evolution

This document provides a definitive record of the main features of the programme and the learning outcomes that a typical student may reasonably be expected to achieve and demonstrate if s/he takes full advantage of the learning opportunities provided. This programme specification is intended as a reference point for prospective students, current students, external examiners and academic and support staff involved in delivering the programme and enabling student development and achievement.

Programme Information				
Programme Title	Computational Methods in Ecology and Evolution			
Award(s)	MRes			
Programme Code	C1Y9			
Associateship	None			
Awarding Institution	Imperial College London			
Teaching Institution	Imperial College London			
Faculty	Faculty of Natural Sciences			
Department	Department of Life Sciences			
Main Location of Study	Silwood Park Campus			
Mode and Period of Study	1 academic year, full-time			
Cohort Entry Points	Annually in October			
Relevant QAA Benchmark Statement(s) and/or other external reference points	Master's Degree Characteristics			
Total Credits	ECTS:	90	CATS:	180
FHEQ Level	Level 7			
EHEA Level	2nd cycle			
External Accreditor(s)	None			
Specification Details				
Student cohorts covered by specification	2021-22 entry			
Person responsible for the specification	Dr Samraat Pawar, Course Director			
Date of introduction of programme	October 2014			

Date of programme specification/revision	August 2021

Programme Overview

New technologies such as next-generation DNA sequencing are revolutionising biology. There are also huge amounts of biodiversity data to be collated and meta-analysed to respond to urgent research needs in a world of rapid global changes.

This course will offer an intensive one-year full-time programme designed to provide you with postgraduate-level training in research skills.

Uniquely, it will start with seven-week intensive training modules in the latest developments of informatics and genomics for whole-organism research.

This is followed by a single nine-month research project in the Division of Ecology and Evolution, which may be jointly hosted by one of our peer-institutes such as the:

- Royal Botanic Gardens at Kew
- the NERC Centre for Ecology and Hydrology
- the Natural History Museum

Project opportunities include genetics, conservation, tropical and environmental biology; they will either be purely analytical or have strong field and/or laboratory components.

It will also provide you with a solid grounding in a range of professional and transferable skills, and the opportunity to make a more informed decision on the area of research and specific PhD project you wish to pursue in the future.

It will be ideal training for those who wish to pursue a career in academic, government or non-governmental organisations engaged in research into biodiversity.

Learning Outcomes

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial College degree programme. The Graduate Attributes are available at: www.imperial.ac.uk/students/academic-support/graduate-attributes

1. Knowledge and Understanding

i. Basic principles of several fields within ecology, evolution, and evolutionary ecology, from a quantitative viewpoint.

ii. An overview of quantitative and modelling methods appropriate for inquiry in these fields.

iii. The nature of the modern interface between biology and mathematics, statistics and computation.

iv. The fundamental role of mathematical models in modern biology. What can and cannot be accomplished with models. Uses and misuses of models.

v. Different modelling frameworks, their strengths and weaknesses, and fundamental problems to which various approaches have been applied.

vi. Research techniques, including study design, information retrieval, computational statistics,

sampling, analysis and presentation of results.

vii. Transferable skills including problem definition, project design, teamwork, written and oral reports, scientific publications.

viii. Detailed knowledge and understanding of the essential facts, concepts, principles and theories relevant to the student's chosen area of specialisation.

2. Skills and other Attributes

Intellectual Skills

i. Analyze and solve research problems by using a multidisciplinary approach.

ii. Integrate and quantify biological knowledge and questions into models and testable hypotheses.

iii. Formulate hypotheses, collect appropriate data to test them, and analyse the data appropriately with models and statistics.

iv. Devise and use appropriate modelling and statistical methods to answer specific biological questions.

v. Plan, conduct and write up a programme of original research.

Practical Skills

i. Devise theoretical models for given problems and implement them in equations and computer simulations.

ii. Design a study that will provide data to answer specific biological questions.

iii. Use and/or develop computational tools and packages.

iv. Use a suite of central statistical tools for fitting and otherwise comparing models with data.

v. Analyse scientific results and determine their strength and validity.

vi. Prepare proposals.

vii. Write concisely and effectively for a scientific and a lay audience.

viii. Use the scientific literature effectively.

Transferable Skills

i. Communicate effectively through oral presentation, written reports, and scientific publications.

ii. Apply statistical and modelling skills.

iii. Management skills: decision making, problem definition, project design and evaluation, risk management, teamwork and coordination

iv. Integrate and evaluate information from a variety of sources.

v. Transfer techniques and solutions from one discipline to another.

vi. Use Information and Communications Technology.

vii. Manage resources and time.

viii. Learn independently with open-mindedness and critical enquiry.

ix. Learn effectively for the purpose of continuing professional development.

Entry Requirements	
Academic Requirement	Normally an Upper 2:1 UK Bachelor's Degree with Honours in a Biological, Ecological, or Life Sciences-based subject (or a comparable qualification recognised by the College). In addition, a minimum of B at A-level maths and/or a degree demonstrating knowledge of maths and or computing is required. Candidates with non-biological backgrounds (for example maths, physics, or geography) or qualifications below the minimum level of the College academic regulations i.e. a lower Second Class Honours degree will need to convince the course directors of their interest, eligibility and/or suitability through their statement of intent in their application, and if necessary, through an informal interview.
Non-academic Requirements	None
English Language Requirement	Standard requirement IELTS score of 6.5 overall (minimum 6.0 in all elements)

The programme's competency standards document can be found at: http://www.imperial.ac.uk/media/imperial-college/faculty-of-natural-sciences/department-of-life-sciences/public/postgraduate/masters/Life-Sciences-Competence-standards-PG.pdf

Learning & Teaching Strategy	
Scheduled Learning & Teaching Methods	• Lectures • Primers • Computational practicals • Seminars • Workshops
E-learning & Blended Learning Methods	• Computer-based work with cloud-based version control • Online lecture and assessment materials • Online seminar recordings
Project and Placement Learning Methods	• Two Miniprojects • Individual research project & dissertation (9 months), which can include placements

Assessment Strategy	
Assessment Methods	• Computing coursework • Oral presentations • Examinations • Mini-project • HPC Long Practical • Seminar Diary • Final Project Report + Presentation • Viva

Academic Feedback Policy

Coursework is double-marked and comments by the markers annotated directly on the papers (electronically for submissions on blackboard). A summary of the feedback (with tickboxes indicating relative attainment on key dimensions) will be completed, and an indicative grade will be given (actual marks will not be communicated to the students). These papers will then be returned to the students as soon as possible and within two weeks of submission. Generic feedback on exam questions (explaining what contributed good answers, typical features leading to lower marks for each question across the whole class) and indicative grades will be returned following exams. A meeting will be held after the end of the taught component, at which each student will have a one-to-one discussion with the Course Director on progress to date, coursework marks achieved and expectations for the project.

Staff-student meetings are held termly to communicate general feedback between student representatives and the course directors. Additional meetings are held to provide general feedback and guidance e.g. on exam performance and project selection.

Dissertations are marked by supervisor and 2 independent assessors, who provide feedback electronically that is returned automatically to students after the final examiners meeting.

Re-sit Policy

The College's Policy on Re-sits is available at: http://www.imperial.ac.uk/student-records-and-data/for-current-students/undergraduate-and-taught-postgraduate/exams-assessments-and-regulations/resitting-examinations/

Mitigating Circumstances Policy

The College's Policy on Mitigating Circumstances is available at: http://www.imperial.ac.uk/student-records-and-data/for-current-students/undergraduate-and-taught-postgraduate/exams-assessments-and-regulations/mitigating-circumstances/

Assessment Structure

Marking Scheme

Pass

- The Pass Mark for all postgraduate taught course modules is 50%.
- Students must pass all elements in order to be awarded a degree.

Merit

- In order to be awarded a result of merit, a candidate must obtain an aggregate mark of 60% or greater, *and also in each element*.
- Where appropriate, a Board of Examiners may award a result of merit where a candidate has achieved an aggregate mark of 60% or greater across the programme as a whole (i.e., across all elements) AND has obtained a mark of 60% or greater in each element with the exception of one element AND has obtained a mark of 50% or greater in this latter element.

Distinction

- In order to be awarded a result of distinction, a candidate must obtain an aggregate mark of 70% or greater overall, *and also in each element*.
- Where appropriate, a Board of Examiners may award a result of distinction where a candidate has achieved an aggregate mark of 70% or greater across the programme as a whole (i.e., across all elements) AND has obtained a mark of 70% or greater in each element with the exception of one element AND has obtained a mark of 60% or greater in this latter element.

Module Weightings

Element (% Weighting)	Module	% Module Weighting
Taught (25%)	Foundations of Biological Computing	4%
	Biological Computing in Python	12%
	Biological Computing in R	12%
	Statistics in R	6.8%

	Spatial Analyses & GIS	7.2%
	Genomics and Bioinformatics	7.2%
	High Performance Computing (HPC)	6.8%
	HPC Long Practical	20%
	Miniproject	24%
Research (75%)	Research Project	100%
