

MSci Mathematics with a Year in Europe

This document provides a definitive record of the main features of the programme and the learning outcomes that a typical student may reasonably be expected to achieve and demonstrate if s/he takes full advantage of the learning opportunities provided. This programme specification is intended as a reference point for prospective students, current students, external examiners and academic and support staff involved in delivering the programme and enabling student development and achievement.

Programme Information

Award(s)	MSci			
Associateship	Royal College of Science			
Programme Title	Mathematics			
Programme code	G104			
Awarding Institution	Imperial College London			
Teaching Institution	Imperial College London			
Faculty	Faculty of Natural Sciences			
Department	Department of Mathematics			
Mode and Period of Study	4 academic years full-time			
Cohort Entry Points	Annually in October			
Relevant QAA Benchmark Statement(s) and/or other external reference points	Mathematics, Statistics and Operational Research			
Total Credits	ECTS:	254.5 – 255.5	CATS:	509 - 511
FHEQ Level	Level 7			
EHEA Level	2 nd cycle			
External Accreditor(s)	Not applicable, but approved by Institute of Mathematics and its Application, Institute of Actuaries, etc.			
Specification Details				
Student cohorts covered by specification	2016/17 entry			
Person responsible for the specification	Professor David Evans, Director of Undergraduate Studies, Mathematics.			
Date of introduction of programme				

Date of programme specification/revision

August 2016

Description of Programme Contents

The programme aims to present a wide range of mathematical ideas in a way which develops students' critical and intellectual abilities. It encourages enthusiasm for the subject as a discipline that is of value both in its own right and in its applications. It aims to provide a good knowledge of a broad range of topics in mathematics and to allow students to acquire a more advanced knowledge of selected parts of the subject. Students have the opportunity to develop mathematical and communication skills that will be useful in scientific or other jobs.

Much of the programme in years 1 and 2 is core. The third year of the programme is spent at a partner university in continental Europe, under the Erasmus scheme. In the fourth year of the programme students can choose from a large selection of modules across a very wide range of areas of Mathematics. They also have the opportunity to take a limited number of modules delivered outside the department. A key feature of the final year is an individual project which allows students to explore a topic or area in Mathematics in considerable depth.

Teaching of Mathematics modules takes place at the College's South Kensington Campus, usually within the Department of Mathematics. Most teaching sessions are delivered by staff from the Department of Mathematics. These are predominantly permanent faculty, but also include teaching fellows and research associates. Problem classes are supported by Graduate Teaching Assistants. Language modules taken not for credit are available during years 1 and 2.

Learning Outcomes

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial College degree programme. The Graduate Attributes are available at: www.imperial.ac.uk/students/academic-support/graduate-attributes

Programme Aims/Objectives:

- Provide high quality education in Mathematics within an environment committed to excellence in both teaching and research;
- Attract well-qualified students and to provide intellectual challenge in a structure containing an appropriate amount of flexibility, so that students can develop their specialist interests;
- Teach and provide the opportunities to learn a core of mathematics fundamental to the education of all mathematicians, together with a wide range of higher level options in Mathematics and allowing some broadening of study through a range of Management and Co-curricular options;
- Introduce students to a wide-range of applications of Mathematics;
- Equip students with a range of mathematical skills – in problem-solving, project work, computation and presentation – to enable them to take prominent roles in a wide spectrum of employment and research;
- Provide further breadth and depth of Mathematics beyond BSc to a level comparable to that of a taught MSc.
- Prepare students for, and give students the experience of, the outlook and learning/working practices in a partner university in another European country – 4 year course with year 3 away from Imperial College.

Knowledge and Understanding:

- The fundamentals of Mathematics as a living discipline in its own right;
- The development of the application of Mathematics as a language in a wide range of situations relevant to research and industry;
- The importance of precision of argument;
- Problem-solving strategies and methods;
- Basic computational skills;
- A selection of subjects which students study in greater depth, according to their interests (and degree coding) leading to current developments at the frontiers of the subject.

Intellectual Skills:

- Ability to assimilate and understand a large body of complex concepts and their inter-relationships;
- Knowledge and understanding of the role of logical mathematical argument and deductive reasoning, together with formal processes of mathematical proof and development of mathematical theories;
- Use of a structured mathematical analytical approach to problem solving, including the importance of assumptions made and consequences of their violation;
- Use of Mathematics to describe and model in applications, including appropriate solution method and interpretation of results;
- Carry out extended investigative mathematical work as an individual and as part of a small group.

Practical Skills:

- Carry out investigative project work as an individual and as part of a small group;
- Use symbolic and numerical software as part of practical computation.

Transferable Skills:

- Solve open-ended problems and problems with well-defined solutions by formulating problems in precise terms, identifying key issues and trying different approaches in order to make progress;
- Carry out an independent investigation using textbooks and other available literature, searching databases and interacting with colleagues and staff to extract important information;
- Communicate effectively by listening carefully and presenting complex information in a clear and concise manner orally, on paper and using IT;
- Use analytical skills, paying attention to detail and using technical language correctly, to manipulate precise and intricate ideas, to construct logical arguments;
- Use IT skills for communication and analysis;
- Work independently use their initiative, organize themselves to meet deadlines, plan and execute an extended project;
- Work in groups, interacting constructively with others.

Entry Requirements	
Academic Requirement	<p>For Mathematics degrees (except joint Mathematics and Computer Science) the normal minimum entry requirement is A*A*A overall, to include:</p> <p>A* in Mathematics A* in Further Mathematics A in one other A-level (though not essential, strong candidates take Physics and/or Chemistry)</p> <p>Mathematics Admissions Test (MAT) or STEP papers.</p>
Non-academic Requirements	None
English Requirement	IELTS 6.5 with a minimum of 6.0 in each element or equivalent
<p>The programme's competency standards documents can be found at: http://www.imperial.ac.uk/natural-sciences/departments/mathematics/study/students/undergraduate/programme-information/</p>	
Learning & Teaching Strategy	
Scheduled Learning & Teaching Methods	<ul style="list-style-type: none"> • Tutorials • Lectures • Problem sheets • Office hours
E-learning & Blended Learning Methods	<ul style="list-style-type: none"> • Computing
Project and Placement Learning Methods	<ul style="list-style-type: none"> • Coursework • Laboratory • Group project • 4th year project
Assessment Strategy	
Assessment Methods	<ul style="list-style-type: none"> • Written examinations • Coursework • Practical

Academic Feedback Policy

Extensive programme of Assessed Coursework/Tests – marked by GTAs and returned. Assessments and Projects – written feedback and an oral presentation.

The College's Policy on Re-sits is available at: www.imperial.ac.uk/registry/exams/resit

The College's Policy on Mitigating Circumstances is available at: www.imperial.ac.uk/registry/exams

Assessment Structure

Marking Scheme

Assessment Rules and Degree Classification:

- Within the Department the total raw mark from each course assessment is SCALED to a 'Mathematics scale mark' so that overall performances can be compared.
- Other than for courses which are assignment/project based, assessed coursework typically contributes in total to no more than 10% of each of the course raw mark totals.
- Details of assessment are contained within the overall First, Second, Third and Fourth Year Course documents
- Honours marks for each year total:
First Year 900 (=8 x 100 +50 +50) for the eight course assessments, computation and the first year individual project.
Second Year 850 (=8 x 100 +50) for the eight course assessments and the second year group project.
Third Year: assessment at University abroad, converted to the Mathematics scale.
Fourth Year 800 (=6 x 100, 1 x 200 project) for the six optional course assessments and the final year compulsory project.
- All candidates who pass each year of their course and satisfy the progression requirements will be considered for honours classification at final graduation.
- Within the Department final honours assessment is based on total scaled marks after the corresponding year weighting has been applied.
- A mark out of 1000 is obtained. Automatic classification for some marks is as follows:
- The course unit requirements and year weightings for the various MSci degrees are as follows:
G103, G104: Length (Yrs): 4; Units Taken: 16; Year Honours Weighting: 1:3:4:5

Automatic Class: TOTAL MARK on Mathematics scale

First Class: at least 700

Upper Second Class: 550 - 680

Lower Second Class: 440 - 530

Third Class: 300-420

Separation lines are set in collaboration with the External Examiners somewhere between the automatic bands. Candidates close to these lines are discussed individually at the Final Meeting of the Mathematics Examining Sub-Board on the basis of the full spectrum of academic performance during the programme.

It should be noted that reporting of marks for individual modules on course transcripts is carried out by translation to the common College scale on which the grades for individual modules are:-

GRADE, MARKS, INTERPRETATION

- A 70% - 100% Marks represent a First Class performance
- B 60% - 69% Marks represent an Upper Second Class performance
- C 50% - 59% Marks represent a Lower Second Class performance
- D 40% - 49% Marks represent a Third Class performance
- E 0% - 39% Marks represent a Fail performance

PROGRESSION REQUIREMENTS

For the MSci degree coding G103, students normally must have achieved a sufficient standard to qualify for admission to the 3rd and 4th years. A student registered for the MSci who has not maintained a satisfactory academic record - currently at about the upper second class level – will normally be required by the Department to transfer at the end of the second year to the third year of a suitable BSc course. Students on the MSci may occasionally be graduated with a BSc after their 3rd year. For G104, a sufficient standard both in Mathematics and in any required language must be attained in order to spend the 3rd year abroad.

Further details on progression requirements can be found in the Scheme for the Award of Honours at:

<http://www.imperial.ac.uk/natural-sciences/departments/mathematics/study/students/undergraduate/programme-information/>

Scaling

Due to the nature of Mathematics as an academic discipline it is often necessary for the raw marks in an assessment to be scaled in order that they map appropriately onto the British undergraduate degree classification system. In accordance with paragraph 18.4 of the [Regulations for the Examination of BSc, MSci, BEng, MEng, MBBS Degrees](#), this process is conducted in consultation with the relevant External Examiner, applied consistently to all students in the cohort and reported at the final meeting of the Board of Examiners. Further details regarding the Department's approach to scaling may be found in the programme handbook.

Year	% Year Weighting	Module	% Module Weighting
Year One	7.7%	Mechanics	11.1%
		Foundations of Analysis	11.1%
		Geometry and Linear Algebra	11.1%
		Mathematical Methods I	11.1%
		Mathematical Methods II	11.1%
		Analysis I	11.1%
		Algebra I	11.1%
		Probability and Statistics I	11.1%
		Mathematical Computation	5.55%
		Individual Poster Project	5.55%
Year Two	23.1%	Differential Equations	11.76%
		Multivariable Calculus	11.76%
		Introduction to Numerical Analysis	11.76%
		Real Analysis	11.76%
		Algebra II	11.76%
		Complex Analysis	11.76%
		Probability and Statistics II	11.76%
		Group Project	5.88%
		<i>1 x module from elective group (A)</i>	11.76%
Year Three	30.8%	Year in Europe	100%
Year Four	38.5%	Advanced Research Project in Mathematics	25%
		<i>6 x modules from elective group (C/D/F)*</i>	12.5% each

**Please note the following rule for year four:*

Students may select at most ONE module from elective groups (C) AND (D) combined.
