Graduate Medicine Degree Checklist

It is not possible to provide a comprehensive list of all degrees that fulfil our criteria since all courses evolve over time. Accordingly, we have developed a checklist that lists our minimum criteria. Before submitting an application, as the prospective candidate you should determine if your course fulfils these criteria. If you think it does, then do apply. If you are subsequently offered an interview, you will be asked to provide the completed checklist, verified by your course tutor or another person recognised by your University. If you are successful at the interview, we will only offer you a place if the verified checklist meets our criteria.

In your undergraduate degree:

1. You will have learned the basic physiology of the mammalian cell to approximately first year university level.

This will include the following:

- a) Basic cellular metabolism
- b) Basic electrophysiology of the cell membrane
- c) The biology of protein and nucleic acid synthesis
- d) The function of the intracellular organelles
- e) How material is exchanged between inside and outside the cell
- f) How material is moved purposefully within the cell

2. You will have learned the basic systems physiology to approximately first year university level of at least four of the following systems:

- a) The cardiovascular system
- b) The respiratory system
- c) The gastrointestinal system
- d) The kidney
- e) Blood
- f) The nervous system
- g) The musculoskeletal system
- h) The immune system

You will be expected to satisfy both criteria for your qualification to be acceptable.

When submitting the checklist as part of your application, please complete the following information:
